Y. W. Girls Success

Campus for General Secretary
Alumnae and Members

Compliant and determined, Miss Paxson set to work to raise the necessary funds to pay the salary. They have been entirely successful and the entire amount is now raised. The effort was made by the students, mostly because the amount was raised entirely among members and alumnae voters. No appeal was made to the people of the town, to the men in the University, or even to the faculty. The response from alumnae was very gratifying. All wanted to help. The secretary is now in the Y.W.C.A. training school at Chicago. She is expected here next Friday. She is a graduate of Kansas University, and her name is Irene Gilchrist.

SMITH ON ATHLETICS.

Patron Saint of Iowa Athletics to Lecture This Afternoon.

Prof. Smith, who has been the main factor in bringing Iowa athletics to their present high moral standing, will lecture this afternoon on "The Modification of Practical Ethics to Athletics." This lecture is one of a course on ethics which has been running weekly this semester.

Editor Discoveries Department.

A short business meeting of the Y. M. C. A. was held last night at Cloze Hall. At that time the resignation of Mr. G. R. Barnard as president for the coming year was accepted and Mr. R. W. Sleeter was elected in his stead.

NEW YEAR BEGINS FOR THE Y. M. C. A.

A short business meeting of the Y. M. C. A. was held last night at Cloze Hall. At that time the resignation of Mr. G. R. Barnard as president for the coming year was accepted and Mr. R. W. Sleeter was elected in his stead.

The first of April begins a new year in the work of the association. While the past year has been disappointing in some respects, in many ways it has been one of good results. The officers for the coming year are as follows:

R. W. Sleeter—president.

R. C. Buck—vice president.

R. C. Crow—vice president.

A. H. Humphreys—secretary.

K. W. Chase—treasurer.

The University Fencing club will entertain at the K. P. hall on April 2. The club, now, has a membership of thirteen and is to increase it to sixteen, which is the limit of their number. Some fine work in this art has been done by the boys under the instruction of Mr. Rodrigues, one of the Mexican students of S. U. I.

The announcement of a meeting between Iowa and Minnesota is due to some mistake. Manager James received a letter some days ago stating for the 15th of May. The announcement is scheduled for that day and the offer was consequently refused. It is not likely that a date can be arranged much as such a meet would be desired.

Honor Dr. Gilchrist's Memory

Expression of Respect and Emotion at the Weekly Assembly.

The weekly assembly yesterday morning took the form of a memorial service in honor of the late Dr. Gilchrist.

Dean Royal, of the College of Homeopathy, gave a short address, speaking of some of the features of Dr. Gilchrist's life and habits, which strongly influenced and helped his colleagues and associates. Dr. Gilchrist's methodical habits, his precision in all matters both large and small, his manifest medical library—these were some of the things mentioned by Dean Royal.

Then Prof. Calhoun, as a G. A. R. comrade, and friend and fellow professor for many years, read the following appreciation:

Dr. James G. Gilchrist—A Tribute

I cannot tell you just when it was that I met Dr. Gilchrist for the first time. The exact month, the day—these things have faded out of mind; but the memory of the first meeting—of the memory of the meeting in the northwest corner of the second floor of the old capitol building that was the meeting place. It was before the old science building had been moved; some years, indeed, before that structure was built, to tell the truth, it was before the possibility of erecting such a structure for the use of natural science and ever been dreamed of. The geologist, zoologist, botanist, and all the offices, lecture rooms and laboratories of geology and natural history were represented at all, were then accommodated in the north end of the second story of the central hall. It was here, in the very northwest corner, one afternoon, a stranger came and introduced himself as Dr. Gilchrist of Detroit. I have always associated that visit with a bright, cheerful, sunny afternoon; but I may be altogether in error as to the kind of weather. One thing I do know, however; my visitor was a bright, cheerful, sunny man, and it may have been the cheer and warmth and the sunshine that he brought with him which created the other impression. It was evident at once that here was a man of culture, a man of refinement, a man of travel and of broad experience; but more than all else it was evident that he was one of Nature's large-souled gentlemen, who needed, perhaps, to find our artificiality of any sort to recommend his manner to those whom he met. His courtesy, his very word and manner, were natural. honest, straightforward. He was interested, as I was at the time, in the microscope and its manipulations. It was with practical enthusiasm and keen intellectual appreciation that he looked (Continued on Page Two.)
HEAR SMITH.

There will be a lecture this afternoon by the man who has put in more earnest effort on athletes, and who knows more about the game as a fact as it concerns Iowa, than any other man in the University. The speaker is Prof. Smith, the subject is one in which you are interested (or should be). What he has to say will have behind it the authority of the conference committee. It will not be a lecture from a theoretical standpoint, but will be drawn from a man who has had real, live experiences, a man who knows things as they are. The lecture comes at half past four, a time convenient for all University students.

(Continued from Page One.)

resuming the great, boundless world over the material then in each scrap of tin, living things which the microscope alone can reveal, a world which ordinarily lay far outside of the experience of the dwellers on this great planet. We have many visitors in those days to see the wonders of the microscope, for microscopist work was now in institutions of learning at that time; but a visitor who could bring appreciation, experience, and home suggestion, was exceedingly rare. Dr. Gilchrist was the first of the kind to visit Iowa City.

After completing the course of lectures he came here to deliver, Dr. Gilchrist remained in the city for a short time. After a while Dr. Gilchrist returned, but in a short time he was called to perform service in the college of Homoeopathy, a high degree of respect among all who had here previously met him, he set up a new office in Iowa City. Since then his life and work among us have been known to all. Dr. Gilchrist was a proud man; he was proud of his services in the army and navy of the United States, he was proud of his profession, proud of his ancestry, proud of his descent from the Grants of Scotland, proud of the integrity of his ancestors which he brought to the unfortunate house of Stuart. He had many things, indeed, of which he might be truly proud, but his pride was never expressed in any offensive or obtrusive way. It was a manly, a saving, an elevating pride. In reality he was one of the most simple and most democratic of men. He was true and loyal to his friends, and found keenest delight in intercourse with those for whom he entertain ed respect, but for the man who shirked advance himself by triviality and pretense, he could express the most scathing contempt. He loved his family, his home, the cozy corner in his library above all else. Within this sacred circle, small as it may seem to some, life's dreams and life's ambitions, for him, were fully realized. He abhorred the little antiquities and petty devices whereby some dwarf and save their own lives and make them seem and miserable, while they vainly sought to gain some undeserved advantage over their fellows, and he kept himself apart from all such mean lines of conduct. Reverence for things true and noble and mercurial, was Gilchrist's most prominent characteristic. Anything bordering on irreverence in respect to sacred things and sacred places shocked and wounded him severely. It was this trait of character, the reverence for the noble and the true, which led to his unnatural devotion to Hears Smith. all that is best and most inspiring in the world is rendered poorer, the world is rendered poorer, the man who knows things as they are.

The Educational Exchange is the recognized medium of communication through the northwestern states between teachers and those employing teachers. If you think of teaching anywhere between here and the Pacific coast, it will pay you to write for information to Henry Sabin, Mani toon Bldg., Des Moines, Iowa.

WANT COLUMBUS.

All advertisements in this column must be paid for in advance at the rate of one cent per word for every insertion. No clamps will be returned.

BOARD—$5.00 week. Short orders.
I. Mrs. Manly, 208 S. Clinton.
II. FOR RENT—During summer school, a five room house, completely furnished for house keeping. Location in two blocks of campus. Address Mrs. F. L. Douglass, 9 E. Market street, Iowa City.

Suit orders for Easter delivery should be in at once. W. L. Sims, James Hotel.

Kentucky Company, Dept. “JL” Chicago, ILL.

Music every afternoon and evening at the roller skating rink.

The crowds grow larger at the Kentucky Company each day.

The Fourth of July.

Do your banking at Iowa City State Bank, under Opera House.
PERSONAL, LOCAL AND GENERAL

ROLLER SKATING

There is a rumor about that the Es will entertain the Hoes at a spread, after the program, on Friday evening.

Miss Grace Gabriell, of Des Moines, is visiting at the F. H. house.

Miss Clara J. Hlavac will leave Friday for Charles City, where she will visit her sister, Jennie, who is teaching in the high school in that city.

Planes to rent at A. M. Greer's

Miss Marian Stoekey and Miss Sara Ruby will entertain the senior Hope, tonight.

Music every afternoon and evening at the roller skating rink.

Drink at Whetstone's Fountain.

The Merchant employs more student workers than any two places in the city.

The Buffalo Forge Co. have been busy the past few days putting in the ventilating apparatus of the engineering hall, the work having been done on account of the non-arrival of the material.

H. M. Pratt, who left here last June and is now at Fort Dodge, was recently elected captain of Company G, 6th regiment, N. C.

College Prapte Whetstone's.

The mechanical engineering department has received a gasoline engine from the O. B. Kelly Manufacturing Co. of this city. The engine is of neat and attractive design and embodies some of the latest ideas in gasoline engine design.

Perry Sundlof—Whetstone's.

Dr. F. P. Recknagel, of Clarinda, is in Iowa City visiting his mother and sister, and will remain until Monday. He took two years of medical work in St. U. I.

Joseph Jefferson and William W. Jefferson, who are to appear here as sir Locius O'Trigger and Bob Acres in "The Rivals," come from an old theatrical family. Their ancestors have been actors since 1746, and the Jefferson name will continue famous for generations to come. These noted actors, supported by an excellent company, will be seen at the Colbourn next Friday evening. Shortlands' essay, "The Rivals." The supporting company includes Messrs. John Jack, Arthur Stanford, Richard Lyle, Harry Odell, and the Misses Blanch Bower and Rose Rand, besides others of the late Joseph Jefferson's company, rents on sale.

Good Soda Water—Whetstone's.

The Merchant employs more student workers than any two palaces in the city.

"GENERAL PROPERTIES OF WAVES."

Prof. Smith inaugurates series on "Ether Waves."

A large and appreciative audience filled the general lecture room of the old physics hall last evening on the occasion of the initial lecture of a series on "Ether Waves," as announced by the department of physics. Prof. Arthur G. Smith opened the course by an interesting and highly instructive discussion of the "General Properties of Waves."

In opening his lecture, Prof. Smith incidentally expressed the fact that the subject which he was about to take up was rather an involved and complex one. However, he assured his audience that he would strive only to present the larger and more general aspects of the theme, and that in selecting illustrations and experiments he would avail himself of only such as would, in their simplicity, be clear and natural to even the ordinary student of science. Those who attended the lecture, we are confident, were greatly impressed by the simplicity of his treatment of the subject, and the broad manner in which he and the highly interesting and positive experiments which he performed form the course of his talk.

Briefly, in his introductory remarks, Prof. Smith stated that there is in nature no method so common and universal in the transmission of energy as that of waves; a few of the more active ones being: water waves, temperature waves, light waves, sound waves, heat waves, etc. He tersely discussed the classification into transverse and compressional vibrations, the nature of media and its relation to the different kinds of vibration, and the phenomenon of elasticity. Going a little more into detail, Prof. Smith took up the general characteristics of individual waves in much the same way, and by the use of such commonplace examples and illustrations that one readily grasped the fundamental idea of wave amplitude, of wave length, and of the meaning of interference, and the diverse phenomena resulting from these factors. Reflection and refraction were an interesting sub-theme in his talk; and in illustrating these, various beautiful experiments were performed. Throughout, Prof. Smith's lecture was of keen interest, and afforded an abundance of good, substantial scientific instruction along this comprehensive line of physics.

Judging this course of lectures by the initial number, we are safe in saying that students interested in scientific work, and even the casual listener, will derive much useful and instructive knowledge from them. The next lecture of this course will be given April 4, by Prof. Charles F. Loewens, on the subject, "Light Waves."
