## SLAUGHTER OF THE INNOCENTS

ISLANDERS BEAT US ONCE MORE

They Wallop Hawkeyes by Overwhelming Score of 13 to 3—Errors, Passes and Cold Weather the Cause.

Well, the leaguers didn't do much to us yesterday.

Their hits at the right time and our poor playing at the wrong time, made us look like thirty cents in comparison with Three-I league caliber. It was bingles and bingles, and bingles and bingles, and when the smoke cleared away Rock Island had the unlucky number (yesterday very lucky) while we had a lowly three.

The weather was not nice like that of Monday and only a small crowd of fans assembled in the grand stand to witness the slaughter. Poyneer did the slab work for the Old Gold and Howard and Herbert for the leaguers. Poyneer was very wild and this was responsible for many of Rock Island's scores giving six passes, four of which materialized into scores. Herbert and Howard, however, were exceedingly stingy and passed none. Poyneer struck out nine, however, while the two Rock Islanders forced only five to fan the air three times.

Rock Island was the first to bat and went out out one, two, three. Iowa not to be outdone, duplicated the stunt. In the second inning with two out, Eng, Rock Island's catcher, sent a safe one into the field scoring Dowers, and then Howard was out at first. Iowa was able to register but a goose egg. The terrible cliff was one that made the fans shiver and chew their cigar stubs. Bradshaw, the Rock Island man up, was passed. Randall came up and laced out a pretty single. Bradshaw going to second. Vandine was out at first, and Spanton hit a long one to the field bringing in Bradshaw and Randall. Barger got to first on Wilson's tumble of his sweat between third and short. Dowers was passed and the bases were full. A hit by Carpenter and an error by Kirk forced three more runs over the pan. Eng was out at first and Howard fanned, and so the awful inning ended. Iowa in her half of the third failed to tally. In the fourth Rock Island began at the head of her batting list again. Bradshaw was passed. Randall, Vandine and Spanton were out and Bradshaw failed to score.

In the last half of the fourth Iowa did all of her scoring. Kent beat one to first. Diley laced out a nice two bagger and a hit by Kirk brought in both Kent and Diley. Miller and Mike Kelley were out and Johansen's hit brought in Kirk. Poyneer hit one to short and Johansen was out at second. Rock Island came back in the fifth and tallied two more by means of a pass, two errors and a

hit. Herbert took the slab for Rock Island in the fifth and he was a mystery to the Hawkeyes. He allowed but one hit and it was one, two, three order for the Hawkeyes the rest of the game, with the exception of the eighth when with one out, "Dub" Wilson sent the fielders running after a long hit over the green. It was in reality but a two bagger but he made three bases on the hit. The two men following were outs, however, and a score failed to materialize.

In their half of the eighth Rock Island to make their tallies assume a figure of two digits, added five more and made a sum of thirteen. Two hits, one of them a homer by Berger, a pass and four errors were responsible for the scoring.

### Sidelights on the Game.

The day was a cold one but the fans stayed out the game, notwithstanding frigidly or Iowa's slaughter.

It was a different sort of game from that of Monday.

Poyneer struck out nine Islanders.

Iowa made eight errors and Rock Island one.

Berger hit the first homer of the season.

Rock Island hit nine safe ones and Iowa five.

Herbert's long sided, slow curves had us fooled.

Rock Island showed us a sample of what leaguers delight in—a slug fest and a scoring bee.

The Islanders drew an unlucky number yesterday, so its up to us to win today.

The fans pitied the players for having to play ball in such cold weather. The fans have some cause for pity too.

There are four games left, so let's jump in and win some.

### Miss Balcom Resigns.

Miss Helen Balcom, superintendent of the University hospital and principal of the Nurses' Training school, has resigned her position here, to take effect April 21. She will be succeeded by Miss Nesbit, formerly of the Council Bluffs hospital. Miss Balcom goes from here to the Finley hospital of Dubuque.

## ANDERSON HAS HIGHEST SCORE

SHARPSHOOTERS PRACTICING EVERY DAY

Team Will be Picked in About a Month—Shoot at Miniature Targets on 50 Foot Range.

Up to date about half the cadets in the battalion have participated in the target shooting on Iowa field. The practice will continue for another month, and about the middle of May the team of ten men will be chosen according to the scores made. Then at the end of the year the contest shooting will occur, in which the scores are made that compete with those of all the schools that take part in the intercollegiate contest. The scores are sent to California. The man who makes the highest score locally receives the Col. Burnett medal, now in the possession of Earl Kilty, last year's winner. Tunncliff is manager of the contest here. By the use of miniature targets on the 50 foot range, the practice is made equivalent to shooting at full size targets at a distance of two to three hundred yards.

The ten highest men and their scores up to the present are as follows: Anderson 60; Griffin 57; Tunncliff 56; Cameron 55; Belknap 54; Harden 53; Lush 49; Waner 49; Moon 48; Mikirk 47 and Leeper 47.

### The Engineering Lecture.

The lecture this evening by Walter B. Snow is under the auspices of the general Engineering society. Mr. Snow is a representative of the Sturdevant company, who have recently finished a very large manufacturing plant. Mr. Snow takes up various engineering problems as exemplified in the installation of such a plant. The lecture will be illustrated with a large number of stereopticon slides. It is open to the public.

At the Regents meeting this week the budget will be taken up and new buildings will be discussed. Bids will probably be opened for the furnishings of the new Science building.

## PROFESSOR O'SHEA COMING

Prominent Educator of Wisconsin to Speak Here Thursday—Speaks on Continental Education

Professor M. V. O'Shea, head of the department of education in the State University of Wisconsin, will deliver a lecture in the assembly room of the Hall of Liberal Arts on Thursday afternoon at 4:30. His subject will be: "Educational Lessons from the Old World." All are cordially invited to attend.

This lecture promises to be one of large interest, inasmuch as Professor O'Shea has a wide reputation throughout the country as an educator and a lecturer. He is the author of several books and a great number of articles published in the educational magazines, the Popular Science Monthly, the Atlantic Monthly, and other magazines of this class.

He has just returned from a tour of the Old World where he has been during his year's leave of absence. Professor O'Shea is well known on the Iowa educational platform and this will give an opportunity for many to hear him who know of him through his books and articles.

### Mr. Sieg's Lecture.

The lecture course given by the department of Physics was continued last evening by Mr. Sieg, who gave a discussion of the elementary principles of light. His opening proposition was that vision is a subjective phenomenon: there is no light if there is not an eye to see it. Objects are seen either because they are themselves luminous, or they reflect light. The color of objects is due to the absorption of all rays but that giving the distinctive color, which is reflected.

The color of the sky is explained by the reflection of the very short blue waves of minute particles suspended in the atmosphere. Reflection was rather fully discussed, and its application shown in common atmospheric phenomena, as for instance mirage. Refraction, the bending of light, was taken up next and illustrated by several experiments; its part in the appearances of rainbow and halo was explained. The speaker then took diffraction, the spreading out of light waves in passing a small obstacle, or in going through a small opening. The iridescence on the surface of ponds covered with oil, and on the surface of a soap bubble, was shown to be a result of light interference.

In conclusion Mr. Sieg spoke of the various kinds of artificial lights, and the efforts of scientists to secure a light similar to sunlight.

Percival Hunt was in Chicago the latter part of last week attending grand opera and several Shakespearean plays.

Mr. Cress freshman Medic, has been called to Riverside by the death of his mother.

## TOO COLD FOR TRACK MEN

UNPLEASANT WEATHER DELAYED TRYOUTS

Not Many Trying for Pole Vault and Jump—Home Meet in Two Weeks.

The cold weather of late, in hurting all outdoor athletics, has especially hindered the track men. Of course not so very much can be attempted while the present state of frigidly keeps up but notwithstanding Coach Catlin has been quite busy with the considerable number of faithfuls who work out every afternoon.

The weight men are getting in the hardest work, but as yet there have been practically no try outs among the sprinters or distance men beyond trials in getting off the mark. The hurdlers have only been practicing form over two or three hurdles.

So far there has been no work at all among the broad and high jumpers, and the pole vaulters. Incidentally it might be said that there seems to be very few varsity candidates for the jumps and the pole vault this spring.

The home meet, which takes place two weeks from this coming Saturday, will undoubtedly be one of the best of its kind ever pulled off at Iowa. It is the intention of Marc Catlin to make it a strictly department meet. With that end in view, meetings of every class of every department will be immediately arranged for where department track captains will be elected. The department captains will see to getting their men out for work outs and in short the home meet is mighty sure to be an interesting event for the whole university.

One feature of the meet will be the various relay races. This coming Saturday will be the day for the first try outs of the department team.

The Pi Beta Phi fraternity will hold its fortieth anniversary reunion and banquet April the twenty-ninth.

Miss Nan Curry of Ottumwa, has returned home after spending several days with Miss Delta Macdonnell.

Miss Sprks of Davenport is visiting Miss Stottenberg.

Mr. Newton of Chicago has been visiting at the S. A. E. house past few days with Mr. Ed Rule.

Wm. T. Oakes has returned to Clinton after a visit at the Phi Delta house.

Burr Seville, senior Dent, is back at his his work after a month's absence.

Dr. George Middleton of Davenport is in the city.

Why not have the best?

# BOSTONIANS

FOR MEN

Oxfords are mighty nice, comfortable shoes, but with the prevailing style of turned up trousers, they are very conspicuous. Be sure your new ones are correct. You will suffer three times the price if you experiment with an inferior article, that squashes out and gets shabby in a week.

You have probably worn Bostonians—stood up all right, did they not, held their shape and kept on an even heel, so to speak, until you grew tired of wearing them? That wasn't an accident—our new Oxfords will act the same way. All styles.

### IN SCIENCE HALL.

When the new Science Hall is completed and occupied, only two of our natural science departments will have their quarters there. The department of Zoology and that of Animal Biology will be moved to the new building, while Professor Calvin and Professor McBride will remain in the brick building, with all the space left by the other departments at their command.

Professor Nutting and Professor Houser have contributed largely to the interior plans of the big new structure. Something has been said heretofore about the disposition of the museum. Not less interesting are the arrangements being made now for the accommodation of the Animal Biology students. On the second floor all of the north wing is devoted to this science, as well as parts of the north wing on the first floor and the basement. The introductory laboratory is a large, well lighted room which will easily hold fifty students. Long tables with slate tops will be placed at each of the windows; these tables are to be narrower at the inner end, so that there will be no obstruction of light along their slanting sides. There will be an aquarium in the room, so that aquatic animals may be observed from life. The advanced laboratory is a room of the same size just across the hall with all facilities that can be desired. A large dispensing room is readily accessible to either of the laboratories; it is equipped with a dumb waiter running down to the basement, where six live tanks will be installed. On the first floor is the lecture room, with a seating capacity for eighty students. Adjoining this is the reading room, where the departmental library is to be placed. Several smaller rooms afford space for photographic work, an instructor's laboratory and still another laboratory for the use of the graduate students.

All of the science departments will profit greatly by the relief from overcrowding and Professor Houser particular is fortunate in the splendid equipment his students will enjoy. For several years he has been obliged to turn away students, but the new facilities will be ample for a long time to come.

## THE HARVARD MEDICAL SCHOOL, Boston, Mass.

With the completion of the new buildings, which were dedicated September 25th, 1906, this school now has facilities and equipment for teaching and research in the various branches of medicine probably unsurpassed in this country. Of the five buildings, four are devoted entirely to laboratory teaching and research. The numerous hospitals of Boston afford abundant opportunities for clinical instruction in medicine and surgery.  
**COURSE FOR THE DEGREE OF M. D.**  
 A four years' course, open to bachelors of art, literature, philosophy or science, and to persons of equivalent standing, leads to the degree of M. D. The studies of the fourth year are wholly elective; they include laboratory subjects, general medicine, general surgery and the special clinical branches.  
 The next school year extends from September 26, 1907 to June 29, 1908.

There's a lot of scrapping among the tailors around town as to which is the real mustard, vent or ventless coats for men this fall. That makes a good clothing man smile, because if he knows his business he will carry every popular crimp in togger, whether King Edward has come out for it or given Mr. Croker and Pont Mogan the high sign. Some Fifth avenue tailors says it's "23" for the vent. Good dressers must go ventless even if they have to cut off their "storm doors" to give the wind a chance. Now that's pretty raw, isn't it? If you want vents you can get them to burn right here in this fashion bazar. You don't have to kow-tow to any of those Gotham guys unless you're built that way. A man can dress here according to the way he was built and that's the way to dress. We aim to dress you here—not merely to clothe you. A full line of satisfaction is guaranteed our customers, as well as the late novelties in suits, furnishings, hats, cravettes and collar uttoms. See me for the c. b.

Some Engineer Work.

The class in the machine shop has just finished a new improved lathe chuck.

The work was all done by the students and the new chuck presents a decidedly neat and finished appearance. Making a lathe chuck is considered to be one of the nicest and most particular operations to be encountered in machine shop work and one which as a usual thing cannot safely be entrusted to the hands of students. This is, therefore, the triumph of the school year.

The new part will be installed on the Lodge and Shipley machine.

A new high-speed lathe is also in process of construction by the students, which will be added to the equipment of the engineering shop.

The San Francisco Chronicle of March 10th as a long article describing the work of Professor G. L. Leslie, L. A. '82, of the School of Technology, Los Angeles, California. His work is described as the "systematizing and simplifying an exact system for the correction of mental and moral defects in school children. So successful has been Professor Leslie's work that it has attracted international attention and bid fair to produce a revolution in the world's educational methods." It is interesting to notice that among the instruments described and used in this work are two, the ergograph and psychergograph, invented by Dr. Seashore of this University.

Herbert G. Lemson, L. A. '85, who for some years was a teacher in the Philippines has returned to Colorado and during this month has opened a bank at Wiley, Colorado.

University of Chicago  
LAW SCHOOL

Three-year course leading to degree of Doctor of Law (J. D.), which by the quarter system may be completed in two and one-fourth calendar years. Case methods of study. College education required for admission, and one year of law may count toward college degree. Students over 21 admitted under special conditions. Law library of 28,000 volumes. Summer quarter offers a special opportunity for extra work to students in other schools and to practitioners who desire to study special subjects.

**Northwestern University Medical School.**  
(Chicago Medical College)  
DR. N. S. DAVIS, Dean,

This medical school is centrally located, convenient to large hospitals, affording abundance of clinical material. The laboratories and lecture rooms are commodious, well-lighted and generously supplied with all modern appliances to aid in carrying on in the most effective manner, the study of medicine.

The full course consists of four years, eight months each, beginning October 1st.

The classes are divided into small sections, thus affording to students better opportunities, or the advantages of individual instruction. This feature, as well as a graded curriculum, characterize the work in all the departments.

The ability of the men who graduate from this school, as well as the character and thoroughness of the work given here, is evidenced by the success of our graduates in the examinations given by the different State Boards. Out of the 135 graduates of the class of 1905 who were examined by the various State Boards in the United States during the last year, only one failed.

For further particulars address the Secretary,  
**CHARLES LOUIS MIX,**  
2431 Dearborn St. Chicago, Ill

**THE WAITING HABIT**

MOST men cherish the notion that sooner or later they are going to win out. They have the eager desire to excel; and they intend to get busy—after awhile. The waiting habit is all that stands between a lot of men and success. If resolution were as common as ambition, the world wouldn't have to plead in vain for able workers. If men would battle for preferment instead of merely wishing for it, civilization would no longer be reproached with that pathetic object—a physically superb man doomed, through lack of knowledge, to idleness and its consequences. Ambition counts for nothing unless backed with a resolute purpose to achieve. You may desire ever so eagerly to better yourself; but the mere desire will profit you nothing. There must be action. Getting right down to hardpan, what have you done to realize your ambition? Have you smashed the barriers of indolence and fickleness? Have you blasted the rocks of inability? Have you acquired the power of knowledge, without which you're as helpless as a corpse? What value do you place on time? Your evenings, how are they spent? And your holidays, what do you get out of them besides a tired feeling? When have you made a manly effort to increase your value by increasing your effectiveness? If you were required to show cause why you shouldn't be numbered with the dead ones, could you keep yourself from the morgue? It's easy to find excuses for not getting out of the rut. But excuses won't bulge the pay envelope, nor establish any better relations between you and the man that makes promotions. The best excuser is usually at the bottom of the ladder. His backbone is flabby. He's too lazy to climb. Cut away from excuses don't chain yourself to failure. Hustle! Give substantial value to your ambition by making it produce results.
