HAWKEYES ARE SECOND AT BIG DES MOINES MEET

Baseball Game Goes to Cornell
Six to Two in Exciting Contest

The Hawkeyes are now in the lead of the Big Des Moines meet, having taken six to two over Iowa last night. The reasons for the Hawkeyes' victory were given by Mr. Stanley Turner of Grinnell and resident elect and residence chairman of the legislature.

During the game, the engineers' batting was especially strong, with Mr. Turner hitting a home run, and Mr. Scott hitting two doubles. The engineers also had two bases on balls and a walk. The Hawkeyes' pitching was also strong, with Mr. Turner striking out four batters and Mr. Scott striking out three. The Hawkeyes' defense was also strong, with Mr. Turner making a fine catch in the outfield and Mr. Scott making a fine play at first base.

The game was played in front of a sold-out crowd at the old Capitol building, with a capacity attendance of 2,000. The Hawkeyes' victory means that they are now in the lead of the Big Des Moines meet, and they will play for the championship tomorrow afternoon.

DOINGS OF ENTIRE UNIVERSITY WILL BE RECORDED ON FILM

Tomorrow afternoon, the entire university will be recorded on film for the first time. The film will be shown in the old Capitol building, and it will be broadcast live via radio.

The film will be shot by a team of 100 students, each carrying a movie camera, and it will be recorded in color. The film will show the entire university, including the buildings, the students, and the faculty. The film will be shown twice, once in the morning and once in the afternoon.

The film will be shown twice, once in the morning and once in the afternoon. The program will be opened with a short address by the university president, followed by the film. The film will be shown in color, and it will be broadcast live via radio.

Miss Clara Sherman, L. A. '14
Will person who picked up note book at Rockland's by mistake please return it to Rockland's or to the Iowan office.
The development and growth of the department of Graphic and Plastics Arts in its new quarters in the physics building has been watched with interest by the students and alumni of the university the past year. A reunion of the work which has been done since the beginning of the school year in September, and of the plans for next year, show that the department, under Dean Amsler and Professor Cumming, has made much more than good seed.

The freshmen work during the first semester was divided between free-hand drawing from geometrical solids and sketching from the living model. The class was alternated every week on these two phases of free-hand work, thus developing the sense of accuracy in the work on solids, and of proportion in the sketching from life. All of the freshmen have been working on finish drawings, studying art in all of the classes of the department. The perspective work has also been carried on in advanced problems, and some work done in shading from perspective.

The second semester, freshmen work, has been continued almost entirely in drawing from cast. The first two months were devoted to sketching for proportions of the face, without regard to finish, and during the last month of the semester the students have been working on finish drawings, studying art in all of the classes of the department. The second semester has been a continuation of the first.

The sophomores course, first semester, included painting in oil from still life, and sketching in oil and water color from the customized models. The sophomores second semester was practically a continuation of the first.

The art department has engaged in a number of enterprises outside of the regular course of study. The main event of the season was the exhibition and masquerade party given by the students April 1. The feature of this occasion was the exhibition of cartoons and caricatures of the students made each of the other classes together with some examples of the class work. The masquerade party was given in connection, which is to be an annual affair.

Professor Culver was the使人者 of the charge and has given a series of lectures on pictorial composition and criticism of pictures, and a lecture was given by Mr. Wyer, university librarian on Process Etching, illustrated with a large collection of pigma etchings which Mr. Wyer brought out from New York.

There are many furnishings and finishings of the studios has been received of two thirds of the work in geometrical solids. The perspective work has always had many courses, and the students made of each other, and the problems required the actual working out by the student of the drawings and plans for room and other objects in the studio.

The exhibition and masquerade party was attended by a country lends itself well to this phase of free hand writing, thus during the fall semester Professor Cumming conducted a course comprising 72 laboratory hours, all the work being done in class and with instruments. This work worked together with the free-hand drawing of geometrical solids, and many of the problems required the actual working out by the student of the drawings and plans for room and other objects in the studio.

Besides the free-hand drawing, Professor Cumming conducted a class in the theory of perspective. The course comprising 72 laboratory hours, all the work being done in class and with instruments. This work worked together with the free-hand drawing of geometrical solids, and many of the problems required the actual working out by the student of the drawings and plans for room and other objects in the studio.
