SATURDAY, the day when Jack Dempsey and George Carlin prepare for the heavyweight championship of the world, will be a red letter day for the followers of the fight. Dempsey will be in the ring in the United States and Carlin is at the cemetery of physical education, and both of the teams will be dispatched from the mainland to the islands of the West Indies.

"Dad said: 'Dempsey has the advantage in this fight. He is the top hand but Carlin is probably the top conditioner. That is his only advantage.'" Carlin will be looking to the end of the round, while Dempsey will be looking to the bell.

The lecture room in the M. S. Hall was filled Monday evening when Dr. C. H. Herrick, professor of physical education, gave an illustrated lecture on the various events of the Olympic games.

The lecturer was the author of the book, "The sportsman," which will be published this fall, and his advice in the lecture was to the effect that the future will be long when the rounds of the fight will be over.

Dr. Herrick said: "Dempsey will win because of his good physical condition, and Carlin will lose because of his lack of it." He then described the comparative physical conditions of the two champions.

The lecture began with a map of the world showing the path of the trade winds which created the Atlantic storms of the great athletic races of the world, and it was an impressive presentation of the two American continents.

Europe, on the other hand, is divided into varied regions, each with its own characteristics of physical education. In Europe, the lecture showed, the mountain ranges of the northern slopes make it impossible for the inhabitants to move freely, while the ocean waters of the south provide a greater opportunity for the development of physical fitness.

The lecture was given by Professor Frank E. Carpenter, who is also the director of the physical education department at the University of Iowa. Carpenter is well known for his contributions to the field of physical education and has been a leader in the development of physical education programs at the university.

The lecture room was filled with students, faculty members, and members of the public, all eager to learn more about the various events of the Olympic games and the methods used to train athletes for these events.

UPPER UNIVERSITY OF IOWA, July 26, 1915

"The lecture given by Professor Carpenter was an excellent introduction to the fascinating world of physical education. He provided valuable insights into the methods used to train athletes for the Olympic games, and his enthusiasm for the subject was contagious. I highly recommend this lecture to anyone interested in physical education or the Olympic games."

STATE WAGES WAR ON GERMS

State Board of Health makes a very good deal for the welfare of the people of Iowa through its bacteriological laboratory.

The State Board of Health is doing a very good deal for the welfare of the people of Iowa through its bacteriological laboratory. Last year 7,412,425 tests for infectious diseases were made at the State Laboratory in Iowa City.

Examinations for transmissible diseases are made quickly and thoroughly. In many cases this is the only way to prevent an epidemic. Last year 7,412,425 tests for infectious diseases were made at the State Laboratory in Iowa City.

For example, the bite of a dog is one of the most transmissible diseases. If the dog has狂犬病，the bite can spread the disease to humans. Last year the State Laboratory in Iowa City examined over 10,000 bite cases and prevented many potential outbreaks.

Another example is typhoid fever. The state laboratory tests for this disease to prevent its spread. Last year the laboratory examined 2,000 typhoid cases.

The University of Iowa has a large bacteriological laboratory, which performs much of the work for the state. Its laboratories are equipped with the latest equipment and methods.

The laboratory staff consists of skilled and experienced doctors, nurses, and technicians. They work in shifts to ensure that tests are performed 24 hours a day.

The laboratory is funded by the state and federal government. Its work is crucial in preventing the spread of diseases and protecting the health of Iowans.
