Duct Stones May Sometimes Cause Swelling Under Jaws

My attention has again been drawn to a case in which I have frequently dealt in making the diagnosis of cystitis. The disease is somewhat rare, and is often mistaken for another condition. The patient is usually a middle-aged man, and the symptoms are often vague and indefinite.

My advice is to consult a specialist immediately upon the discovery of any swelling, and to avoid self-medication. A careful examination is necessary to make an accurate diagnosis, and prompt treatment is essential. The use of antibiotics and other medications should be supervised by a competent physician.

Borden's team now faces a tough test against South High, a team that has been dominant in recent years. But Borden and his players are confident that they can pull off another upset.
