Good Eating Habits Influence Weight and Health of Children

By LORAN CLAGgett, M.D.

Good eating habits can mean the difference between a lifetime of good health or one of poor health and shortened life span. The modern child is growing up in a world of abundance and with a variety of foods available at his disposal. It is his responsibility to select the proper foods and to eat them in proper amounts and at the right time of day.

A balanced diet contains proteins, vitamins, minerals, and carbohydrates in proper proportions. A child's weight is controlled by the rate at which he gains weight. If he gains too little weight, he will be undernourished; if he gains too much weight, he will be overweight. It is the responsibility of parents and teachers to see that children have proper food and that they develop sound eating habits.

One of the first steps in developing a good eating habit is to provide a variety of foods. The child should be encouraged to try new foods and to eat them regularly. He should also be taught to eat slowly and to chew his food thoroughly. It is also important to provide a good supply of fresh fruits and vegetables, as these are rich in vitamins and minerals.
