**A Last Look At '50 Before We Enter Last Half Of 20th Century**

**By JOHN BUCKERS**

January...

The early part of 1951 found the labor situation in this country at an all-time high, with more than 200,000 men out on the job.

The Federation of Labor estimated that the cost of the strike in the United States alone came to $250,000,000, or about $1,000,000 per day.

The National Labor Relations Board has ordered all companies engaged in the manufacture of automobile parts to cease and desist from violating the provisions of the National Labor Relations Act.

**February...**

A coal strike drags on in the West, with the miners demanding a 60 per cent increase in wages.

The coal operators have offered a 40 per cent increase, but the miners refuse to accept it.

The strike has caused a great deal of inconvenience to the public, with thousands of railroads and other industries being affected.

**March...**

The Korean War officially ends, with both sides agreeing to a truce.

A new era begins for the world, as the atomic bomb is tested.

The United Nations Security Council votes to create a new body, the United Nations, to replace the League of Nations.

**April...**

The United States signs a peace treaty with Japan, ending World War II.

The first-ever United States space satellite is launched, leading to a new era of space exploration.

**May...**

The first atomic energy conference is held, bringing together scientists from around the world.

The first commercial airliner, the Boeing 307 Stratoliner, makes its maiden flight.

**June...**

The first successful heart transplant is performed, opening a new era in medicine.

The first successful underwater oil well is drilled off the coast of Texas.

**July...**

The first successful satellite launch is made by the United States.

The first successful landing on the moon is achieved by the United States.

**August...**

The first successful test of the hydrogen bomb is conducted by the United States.

The first successful test of the thermonuclear bomb is conducted by the United States.

**September...**

The first successful test of the thermonuclear bomb is conducted by the Soviet Union.

The first successful test of the thermonuclear bomb is conducted by China.

**October...**

The first successful test of the thermonuclear bomb is conducted by the United States.

The first successful test of the thermonuclear bomb is conducted by the United States.

**November...**

The first successful test of the thermonuclear bomb is conducted by the United States.

The first successful test of the thermonuclear bomb is conducted by the United States.

**December...**

The first successful test of the thermonuclear bomb is conducted by the United States.

The first successful test of the thermonuclear bomb is conducted by the United States.

**Conclusion...**

The year 1951 marked a new era in the history of the world, with the atomic bomb and space exploration opening new frontiers for science and technology.

The events of 1951 set the stage for the remainder of the 20th century, as humanity grapples with the challenges of the nuclear age.
A Look to The Future
Our Life in 2000 A.D.

- Experts Give Ideas

It will approximate free press for the 20th century, with a number of years shorter than that of a century. There will be no less than 2,500 million daily newspapers and 150 million magazines, according to the experts. Experts agree that it will be impossible to read them all, but that it will be possible to read all of the newspapers and magazines that are important to the reader.

Population

The U.S. population will nearly double in the next 40 years, with the birthrate continuing to decline. The shrinking of the work force will increase employment opportunities and lower unemployment. The birthrate continues to increase, while the death rate continues to decline, resulting in a growing population. This growth will result in increased demand for housing, food, and other goods and services. The growth of the population will result in increased demand for housing, food, and other goods and services.

Many Students Stay Here During Vacation

Many students stay here during vacation, according to the experts. This trend is expected to continue, as students continue to take advantage of the opportunities available in the community. The trend is expected to continue, as students continue to take advantage of the opportunities available in the community.

WSU PROGRAM CALENDAR

Science

Science will be the core of the new educational system. The focus will be on developing critical thinking skills and problem-solving abilities. This will be accomplished through hands-on learning experiences and real-world problem-solving activities.

DEPARTMENTAL LIBRARY

The library will continue to evolve as the focus shifts from print to digital resources. The library will continue to evolve as the focus shifts from print to digital resources.

Iowa A Land of Plenty in ’50

By VANCE LEE

Iowa, a land of plenty, is what many people think of when they think of Iowa. The state is known for its rich agricultural heritage, with corn and soybeans being the main crops. Iowa is also known for its beautiful landscapes, with the Des Moines River and the Loess Hills being popular tourist destinations.

Iowa A Land of Plenty in ’50

By VANCE LEE

Iowa, a land of plenty, is what many people think of when they think of Iowa. The state is known for its rich agricultural heritage, with corn and soybeans being the main crops. Iowa is also known for its beautiful landscapes, with the Des Moines River and the Loess Hills being popular tourist destinations.
It was the end of the Korean War, and the United States was preparing for peace talks. The President, Harry S. Truman, had just declared the "Truman Doctrine" as a response to the Soviet Union's explosion of a nuclear bomb. The United States was determined to prevent the spread of communism and to contain the Soviet Union. Truman's decision was met with mixed reactions from the public and the military. The United States was facing a new threat in the form of the Soviet Union's nuclear weapons, and Truman was under pressure to take action. The United States was sending troops to Korea to support South Korea, and Truman was facing criticism for his decision to involve the United States in the conflict. The United States was also facing a domestic crisis with the railroad strike, which threatened to disrupt transportation and communications across the country. The United States was determined to avoid a military conflict, but the situation was tense and the outcome was uncertain.
THE NEW YEAR
Is What We Make It

Problems, personal and world-wide, beset all of us. But problems have always faced men...they have provided the challenge which mankind has, with the help of divine aid, never failed to meet. And out of that has come progress.

1951 can be such a year of progress - progress toward a lasting peace in a free world - progress toward solving the problems of poverty, sickness, and unhappiness across the world and here at home. If we face our job with determination and resolution we cannot fail.

May the New Year be one of steady advancement and of success for you and for all of us.
