Paddle the Parents

The majority of college students who consume alcoholic beverages started to do so before they got to college. At least that is one of the conclusions reached by Yale university researchers who polled 17,000 students in 27 colleges of all types across the U.S. as an effort to answer the question "Why do people drink?"

Yale researcher Robert Stevens reports 90 per cent of new students and 85 per cent of returning students started drinking before going off to college.

Survey report shows the influence of the parents on college drinking. Of the 90 per cent of new students who drank, 90 per cent of their sons and 85 per cent of their daughters also drank; whereas if both parents are non-drinkers, so are 43 per cent of their sons and 35 per cent of their daughters.

The research found that 85 per cent of college men who drink; but only 47 per cent preferred to do so in secret. Thus why do the other 23 per cent drink beer? Strauss concludes that they do their drinking behind closed doors.

All of which brings us to a research finding that family income is a big factor in the drinking habit of students. Thirty-three per cent of new students and only 50 per cent of women students who come from families with incomes of less than $5,000 a year drinker; whereas from families with more than $10,000 a year success, the figures are 86 per cent and 78 per cent respectively.

No one can blame the parents for raising drinking. It is true that 5 per cent of the drinking habits of the parents are the biggest factor in determining the drinking habits of college students. It has become common sport to ridicule our colleague and say, "the student parent will drink a". But let's put the blame where blame belongs.

GENERAL NOTICES
