Aswan High Dam Dedicated

The Daily Iowan

On a Jared to their days to secure POW's from the North Vietnamese POW camp at Son Tay, Moody and the boys have excelled on a mission to release the prisoners to aid the South Vietnamese.

The prisoners which this program has left U.S. troops with nothing to do while the war raged on was a success. Second, but not by any means the least important part of the program, was the South Vietnamese Army. The South Vietnamese Army has a potential of being a powerful force if properly trained and equipped.

The plan will work like this: First, we will keep several hundred thousand GIs in the area to find the prisoners. Second, we will keep the IBM machine running full steam to help us track down the prisoners. Third, we will keep the South Vietnamese Army in a state of readiness to provide assistance when needed.

The program will be successful by supplying both the forces for black market and a ready source of prisoners. We will have a force ready to send in if needed. We can keep the IBM machine running full steam to help us track down the prisoners and we can keep the South Vietnamese Army in a state of readiness.

The IBM machine will be our main tool in this program. It will help us keep track of the prisoners and it will help us keep the South Vietnamese Army in a state of readiness.

Letter: Corvalle Salvage

To the Editor:

I wish to applaud Mr. Moore's statement about the need for a national health care system. The government has a responsibility to ensure the health and well-being of its citizens. The current system is broken and needs to be fixed.

I also want to mention the importance of education. It is essential that we invest in our future by providing quality education for all students.

The economy is also a major concern. We need to work towards creating a strong economy so that everyone has the opportunity to succeed.

Thank you for your time and consideration.

Sincerely,
