Ford testimony 'up in air'

John Whidden, Treasury.

The Ford administration's plan to restructure the federal government in order to cut costs and improve efficiency has been put on hold again. The White House announced that the new plan will be delayed until after Congress completes its work on the fiscal 1980 budget. The White House said that the new plan will be submitted to Congress after it has been reviewed by the House and Senate budget committees.

The announcement came as a surprise to many observers, who had expected the plan to be submitted to Congress earlier. President Ford had been pushing for the plan to be submitted to Congress as soon as possible, in order to give Congress enough time to consider it before it goes into effect.

The administration's plan is designed to cut the federal budget deficit, which is currently projected to be $137 billion this year. The plan would involve cuts in a variety of federal programs, including defense, domestic and social programs.

Sen. Robert Dole, R-Kan., the Senate Majority Whip, said that he was disappointed by the administration's decision.

"We were hoping the administration would move forward with its fiscal reform plan," Dole said. "We believe the plan is necessary to address the country's fiscal problems."
Ford economy plan 'ready for Congress'

This is to be a part of the president’s economic program, to be presented to Congress in his State of the Union message on Jan 11. The president wants Congress to act on the program by mid-January.

Inflation will be a key issue in the program. Inflation has risen to 12% in the past year, and the Federal Reserve is expected to raise interest rates to combat it. The president is expected to propose a package of measures to control inflation, including raising the minimum wage and increasing the tax on corporations.

State University of Iowa

It is a decision that elementary school students are bringing to their districts across Iowa. As a result of the Lau decision in court, a two-year old bilingual education program has been implemented in all twenty-six Iowa school districts. The bilingue...
Faculty Responsiveness (?)

Faculty salary increases of 12 percent per year for the years 1971-72 for professors and 10 percent for 1972-73 were included in the budget of the university. The university president expressed the hope that the salary increases would be approved by the regents at their next meeting. The university's financial situation was not as strong as in previous years, and the university was facing the need to make cutbacks in its expenses.

The regents' faculty salary proposal drew an angry response from the United States. The president of the university, who was critical of the increase, stated that faculty salaries were not the main concern of the university. The university's financial situation was not as strong as in previous years, and the university was facing the need to make cutbacks in its expenses.

The university's financial situation was not as strong as in previous years, and the university was facing the need to make cutbacks in its expenses.

Kissinger departs for Mideast talks

WASHINGTON (AP) — Secretary of State Henry A. Kissinger has added these energy-producing fresh fruits to his daily diet: pears, peaches and plums. They are among the fruits and vegetables Kissinger and his advisors have outlined as the key to a more efficient and less polluting world.

Kissinger learned Tuesday afternoon that the Middle East is his greatest single problem as he prepared to depart on a U.S. mission there. He is scheduled to return Oct. 15.

In the 1967 war,

resolution. He is now scheduled to

return Oct. 15.

Kissinger said the problem of foreign aid was directly involved in the success of the Middle East war. He said it was important to recognize the existence of a new problem: the need to help the nations of the Middle East develop their own resources and industries. He added that the U.S. must continue to provide economic assistance to the nations of the Middle East, but that it must also encourage them to develop their own resources.

The secretaries of state and foreign affairs in the Middle East have called the situation there "extremely serious." They said that the nations of the Middle East must work together to achieve peace and stability in the region.

Kissinger said the situation in the Middle East was "very serious." He said that the U.S. must continue to support the nations of the Middle East in their efforts to achieve peace and stability.

The report on post-secondary education in Iowa raises concerns about the adequacy of resources in the state's public colleges and universities. The report found that the number of full-time equivalent (FTE) students in the state's public colleges and universities has decreased by 5 percent since 2010. The report also found that the number of faculty members has decreased by 2 percent.

The report recommended that the state increase the funding for public higher education to ensure that the state's public colleges and universities are able to meet the needs of students.

On February 28, 2016, the North Liberty Town Council approved a new bus route between North Liberty and Iowa City.

The new route will begin on Monday, March 7, and will run on weekdays between 6:30 a.m. and 7:30 p.m.

The route is "unique in the area," according to Casiana, a local economist. She said the route will help to reduce traffic congestion and provide a more efficient way for people to get to and from downtown Iowa City.

The route will be operated by a private company and will offer a one-way service.

The fare for the route is $2.50 for adults and $1.50 for seniors. The fare for children under the age of 12 is $1.00.

The route will be provided by the Iowa Department of Transportation and will operate from Monday through Friday.

The route will allow people to travel to and from downtown Iowa City for $2.50, which is a significant savings compared to other transportation options in the area.

The route will serve the needs of people who do not have access to a car or public transportation, and will help to reduce traffic congestion in the area.

The route will also be available to people who need to travel to and from work, school, or other destinations.

In addition to offering a convenient and affordable transportation option, the route will also provide economic benefits to the local community.

The route will create jobs for local residents and will help to stimulate the local economy.

The route will also provide a convenient transportation option for people who need to travel to and from the airport or other destinations.

Stork unemployment on the rise

NATIONAL EDUCATION ASSOCIATION

440 N. Capitol St., N.W.
Washington, D.C. 20001

By MICHAEL ADAMS

Staff Writer

Stork unemployment has been on the rise, according to a recent study by the National Institute of Childbirth Research. The study found that the average stork's employment rate has dropped by 20% over the past decade.

The decline is due to a variety of factors, including a rise in adoptive parents, an increase in the number of single women who choose to become parents, and a decrease in the number of teenagers who become pregnant.

The report also notes that the stork unemployment rate is highest among the younger age groups, with the rate for those under 20 years old being more than twice the rate for those over 40.

The study recommends that more support be provided for storks, including better training and resources for new parents.

The National Institute of Childbirth Research is a non-profit organization that conducts research and provides information on childbirth and parenting.

The report is available for download on their website.
In the women's tennis tournament Sunday the champion was Barbi Jordan, beating out Jill Ransaw. Ax Rose Claeys finished a close second.

Most people who have high blood pressure don't know it. Their hearts do.

It's been called our most ignored disease and half of them probably don't even know it. A lot of them are going to find out about it when they get a heart attack or stroke. When that's too late. The control of high blood pressure is the easiest and most protective way to control heart disease and stroke deaths known today. Finding out about your blood pressure takes only minutes and can add many years to your life. Bringing it down to safe levels is usually a matter of medication. Having your blood pressure checked as soon as you can before something serious tells you too it's too late. We care.

Most people who have high blood pressure don't know it. Their hearts do.
