WASHINGTON (UPI) -- The former head of the U.S. nuclear agency testified Wednesday that President Carter's administration had "abandoned the nuclear arms control effort" by his administration.

Testifying under heavy security in a federal courtroom in Washington Wednesday, James Leach, a former nuclear-auction agency official, said the Carter administration had "abandoned the nuclear arms control effort" by his administration.

In addition, Leach said that the Carter administration had "abandoned the nuclear arms control effort" by his administration.

Leach, a former nuclear-auction agency official, said the Carter administration had "abandoned the nuclear arms control effort" by his administration.

During more than six hours of testimony, Leach said that the Carter administration had "abandoned the nuclear arms control effort" by his administration.

Senate notes tennis; 
to charge or not to ...

By MIKE O' MALLEY
Staff Writer

Senator Moore will introduce a bill to tax the tennis fees of non-athletic students. The fee, to be called the "taco fee," would be charged to all non-athletic students who use the Kinnick Stadium courts from 7 a.m. to 7 p.m. The fee would be implemented to cover the cost of using the courts, which come at a cost of $130,000 per year.

Senator Moore's bill would also require all non-athletic students to sign a "personal liability and insurance" agreement before using the courts. The agreement would state that the university is not responsible for any injuries sustained while using the courts.

Senator Moore said that the fee would be a way to ensure that all students contribute to the cost of using the courts. The fee would be $20 per semester, and students would be required to pay it before using the courts.

Some students have expressed concern about the fee, saying that it is too high and that it would be unfair to charge non-athletic students. Others have argued that it is a reasonable way to cover the cost of using the courts.

The Senate will vote on the bill this week, and Senator Moore predicts that it will pass with a majority vote.

Law library one-door exit policy 
made permanent after controversy

By CATHERINE MILLER
Staff Writer

A new one-door exit policy for the Law Library has been made permanent after a controversial vote last year. The policy was implemented in response to concerns about safety and security at the library.

According to library officials, the new policy has resulted in a decrease in theft and vandalism at the library. In addition, the policy has improved the flow of traffic through the library, making it easier for students to find what they need.

The policy was implemented after a series of break-ins at the library last year. The break-ins were a concern among library staff and students, and the policy was seen as a necessary measure to prevent further incidents.

The policy has been praised by many students who use the library, who say that it has made the library a safer and more enjoyable place to study.

The policy has also been criticized by some students who say that it is too restrictive and takes away their freedom of movement. However, the library staff argue that the policy is necessary for the safety and security of the library and its users.

The policy has been in place since last year, and it will remain in effect indefinitely.

Tennis anyone?

Under the present tennis fees structure, students will be charged 50 cents to use the courts free of charge.

Ray a suggested salaries too low for UI officials

By E. PATRIC JENSEN
Contributing Editor

UI officials Wednesday called for the Iowa Legislature to consider increasing salary hikes for university officials. The officials cited several reasons for their recommendation, including the need to attract and retain top talent.

Tim Jennings, associate vice president for finance and administration, said that the university's current salary structure is not competitive with other universities in the region.

"The average salary in the Big Ten is $130,000," Jennings said. "Our salary levels are currently lower, and we need to make sure that we can attract and retain the best people who want to work here.

The university's current salary levels are also lower than those at private universities in the area. Jennings said that the university needs to be able to offer competitive salaries to attract and retain top talent.

The university's salary structure is also lower than those at other state universities in the region. Jennings said that the university needs to be able to offer competitive salaries to attract and retain top talent.

WASHINGTON (UPI) — The House is expected Thursday to start debate on the House Banking Committee's attempt to block the Treasury Department from buying $50 million worth of gold and notes for its reserve fund.

Carter, in a letter read at the opening of debate in Democratic Leader James Wright, had said the Treasury Department's purchase of gold and notes would reduce the nation's reserves and increase the nation's dependence on foreign capital.

The House also rejected 313-10 an amendment by Rep. Walter J. H. Fine, D-Calif., to require the House Banking Committee to submit to the House floor a list of individuals and groups from which gold and notes are being purchased.

The amendment was approved by 120,000-

Safety overlooked as building priority

This year the legislature voted to appropriate $8.2 million for the Old Armory and Chemical Laboratory. Rotary Building. Over 30 years ago both buildings began to accumulate a long list of safety code violations that have not been corrected. Fire tags have continued to get worse throughout.

Ecology — an aspect of humanism

By STEVE PRENDEL

"Ecology" is the word botanists use to define the interrelated ways things in their environment - air, soil, water, and such - affect the organisms that live in and affected by, everything else. It is, in a didactic sense, what is applied to human system - the economy, industry, society, concern, etc. - in relationship. Turning on a light-switch and seeing the electric effects of cold and warmth is also a form of inter-relation. But after all, everyone has to use energy, so it is not a major aspect of what it is to be human. However, a daily awareness of the in- terrelationships and consequences of our actions can allow you to minimize the harm you might do to those things that depend on us, in your choice.

Environmental Action is in fact an area in which the U.S. however has some accomplishment. In the years after the first Earth Day, U.S. governments, such as Pennsylvanla, have no such political recognition that an action taken in this respect. But every day we must act as if our future depended on our actions for the present. And for the increasing number of people that can be involved, it is not a matter of luck or chance.

Grain reserve will fight starvation

By the Author

People are aware that wealth through the 1970's and 1980's, the landガン農業 Organization reports that the world must double its grain production by the year 2000. The major reason for this is that the world's population is growing at a rate of about 2% a year. Thus, to keep up with the growing demand for food, grain production must also increase at the same rate. This increase can be achieved through the following methods:

1. Increased agricultural practices. This involves improving the efficiency of the land and labor used in agriculture. For example, the use of new crop varieties, improved irrigation systems, and better pest management practices can all increase crop yields.

2. Increase in fertilizer use. Fertilizers provide essential nutrients for plants and can increase crop yields. However, overuse of fertilizers can lead to soil degradation and water pollution.

3. Increased use of pesticides. Pesticides are used to control pests that can reduce crop yields. However, overuse of pesticides can lead to environmental problems, such as pollution of groundwater and air.

4. Increased use of irrigation. Irrigation is used to supply water to crops, especially in arid regions. However, overuse of irrigation can lead to water scarcity and salt accumulation in soils.

5. Increased use of renewable energy sources. Renewable energy sources, such as solar and wind power, can be used to generate electricity and heat for agricultural applications. However, these sources are currently expensive and their use is limited.

6. Increased use of biotechnology. Biotechnology is used to develop new crop varieties that are more resistant to pests and diseases. However, the use of biotechnology is controversial and its effects on the environment are not well understood.

7. Increased use of genetic engineering. Genetic engineering is used to modify crop plants to improve their yields and resistance to pests and diseases. However, the use of genetic engineering is also controversial and its effects on the environment are not well understood.

8. Increased use of conservation practices. Conservation practices, such as crop rotation, cover crops, and soil management, can help sustain soil health and prevent soil erosion. However, these practices require additional labor and can be difficult to implement.

In conclusion, the world must double its grain production by the year 2000 to meet the growing demand for food. This can be achieved through the following methods:

1. Increased agricultural practices
2. Increase in fertilizer use
3. Increased use of pesticides
4. Increased use of irrigation
5. Increased use of renewable energy sources
6. Increased use of biotechnology
7. Increased use of genetic engineering
8. Increased use of conservation practices

Letters

Editor, The Iowa Daily

I am writing to express my concern about the environmental impact of the proposed development in downtown Iowa City. The city council has recently approved a plan to build a new convention center and hotel complex on the site of the old Armory and Chemical Laboratory. This development will involve the demolition of two historic buildings that have significant architectural and historical value.

In addition, the proposed development will have a negative impact on the surrounding community. The construction noise and debris will disrupt the daily lives of nearby residents and businesses. The increase in traffic and parking will also cause congestion and pollution. The proposed development will also increase carbon emissions and contribute to climate change.

I urge all Iowa City residents to speak out against this development and to support efforts to preserve our historic buildings.

Yours truly,

[Name]

Subliminal imbeds cheapen our lives

By the Author

The editor's note following Tuesday's (26) letter to the editor by Ann Hayes and Nancy Spechor-Stevens raised the point that subliminal messages in advertisements are common.

The subliminal technique involves presenting information in a way that is below the level of consciousness. This can be done by using rapid flashing images, silent sounds, or low-frequency tones. The idea is that these messages can be implanted in the mind without the individual's awareness.

The subliminal technique is often used in advertising to influence consumer behavior. It is argued that people may not consciously notice these messages, but they may still be affected by them.

However, the effectiveness of subliminal messages is not supported by scientific evidence. Research has shown that people are not easily influenced by subliminal messages, and that they are often aware of the messages when they are presented.

In addition, the subliminal technique is often used to manipulate people's thoughts and beliefs. It is argued that subliminal messages can be used to control people's behavior or to influence their decisions.

It is important for consumers to be aware of subliminal messages and to be cautious when interpreting advertisements. They should be careful to read and understand the content of advertisements, rather than relying on subliminal messages.

In conclusion, the subliminal technique is a common advertising technique that can be used to influence consumer behavior. However, it is not supported by scientific evidence and can be manipulative in nature. Consumers should be aware of these messages and be cautious when interpreting advertisements.
Cheating past, cadets return to West Point

WEST POINT, N.Y. — (AP) — The first group of cadets who were dismissed from West Point last year for misconduct while on duty at the U.S. Military Academy is being totally reinstated, it was announced Thursday.

"They can't be put out through the academy's normal procedures," said Michael E. Moore, Jr., of Moises, Moises Co., which operates the academy. "Our policy is to report back Wednesday." The academy is again taking applicants, starting May 1 and re-establishing normal procedures upon their return to West Point, but will take no actions against them.

The academy's new program, which began last fall, involves a system of small, one-on-one counseling sessions where cadets can return to West Point and re-establish normal procedures upon their return. The academy has not announced any plans for reinstatement of cadets who were dismissed from the academy's last year in the midst of the United States Military Academy scandal.
