WASHINGTON, D.C. — The Nuclear Regulatory Commission Wednesday overturned a protest by the National Safety Forum, a group that has been highly critical of the agency's oversight of nuclear power plants. The protest was filed by the New York-based group over the commission's decision to approve a new set of regulations for the plants.

The commission, in a 4-1 vote, said the new rules were necessary to ensure the safety of the plants and to address safety concerns raised by the group. The rules are intended to improve the oversight of the plants, which are among the nation's oldest and most troubled.

The commission's action comes as the Senate is considering a bill that would authorize $12 billion in federal funds to help modernize and upgrade the nation's nuclear power plants. The bill, which is expected to pass the Senate this week, would provide $8 billion to make immediate safety upgrades and $4 billion for longer-term efforts to improve plant safety.

The Nuclear Regulatory Commission, which regulates nuclear power plants, said it was satisfied with the new rules and did not need to make further changes.

The statement from the commission's chairman, Brad Calhoun, said the new rules were designed to ensure that the plants are safe and that the public is protected.

The National Safety Forum, which has been critical of the Nuclear Regulatory Commission's oversight of nuclear power plants, said it was pleased with the new rules but that more work was needed to ensure the safety of the plants.

The forum, which has been a vocal critic of the Nuclear Regulatory Commission, said the new rules were the result of hard work and dedication by its members.

The forum praised the Nuclear Regulatory Commission for its decision to approve the new rules and said it was pleased with the outcome.

Carter says satellites will enforce SALT II

NEW YORK — President Carter said Wednesday that the United States would enforce the Strategic Arms Limitation Treaty II (SALT II) with the help of satellites.

"SALT II is an important step in the effort to control the arms race," Carter said during a speech to a group of students at the United States Military Academy.

"We need to enforce SALT II with satellites," Carter said. "The United States will have a comprehensive system of satellites to enforce SALT II."

Carter said the United States would use satellites to monitor the compliance of the Soviet Union with the SALT II treaty. He said the United States would also use the satellites to monitor the compliance of other countries with the treaty.

Carter said the United States had already begun to build a system of satellites to enforce SALT II. He said the system would include both military and civilian satellites.

Carter said the United States would use the satellites to monitor the compliance of the Soviet Union with the SALT II treaty. He said the United States would also use the satellites to monitor the compliance of other countries with the treaty.

Making America illiterate

**PROVIDENCE, R.I. (UPI) — Students who write to home now have a way to do it. Two Brown University students who read some of the nation's telephone books at a used bookstore made a discovery and now plan to sell it through the mail.

One of the students is a Brown University graduate who now lives in Newport, R.I. He recently returned to Providence and was looking through some of the city's telephone books when he noticed a number of names that were not listed in the previous edition.

"It was obvious that some of the names had been removed from the telephone books," he said. "We decided to see if we could do something about this." The students said they plan to sell the telephone books through the mail and offer a subscription service.

"We want to make it simple for people to keep in touch with their friends and family," he added. "We think this is a good way to help people keep in touch with each other."

discrimination.

In a pre-arranged speech Monday afternoon, Dr. Richard D. Mahoney accused the administration of the university of political bias.

The university has a history of political controversy, with students and faculty members accusing the administration of censorship and biased decisions.

Dr. Mahoney, a history professor, spoke out against what he called the "culture of fear" at the university.

"Our university has become a place where free speech is not protected," he said. "We are living in an era where our freedom of expression is under threat, and we must stand up against it."

Dr. Mahoney called for a more open and democratic atmosphere on campus, where students and faculty members can freely express their ideas without fear of retribution.

The university administration has denied Dr. Mahoney's allegations, saying that the university is committed to the principles of free speech and academic freedom.

But Dr. Mahoney's speech was met with a mix of support and criticism.

Some students and faculty members praised Dr. Mahoney for speaking out, saying that the university needs more open dialogue and transparency.

But others criticized Dr. Mahoney for his use of strong language and his accusations against the university administration.

Dr. Mahoney's speech was the latest in a series of protests and protests against the university's policies.

In recent months, students and faculty members have voiced concerns about the university's handling of sexual assault cases, the diversity of its faculty and student body, and the university's financial decisions.

Dr. Mahoney's speech was also met with a call for a referendum to decide on the university's policies.

"We need a referendum to give the students a voice," Dr. Mahoney said. "We need to know what the students really want."
Security threat

In a bid to challenge traditional security, Angelicons posted a letter to the Federal Reserve, advocating for a new approach to security. Specifically, the letter suggests that the need for military intervention and surveillance can be mitigated through a focus on nonviolent resistance and community organizing.

The proposal, which appears to be based on a number of sources, argues that the current system of security is flawed and ineffective. It calls for a shift away from military spending and militarized forces, and instead proposes the use of community-based organizing, nonviolent direct action, and other strategies to address issues of security.

The letter was signed by several prominent leaders in the nonviolent resistance movement, including a number of veteran organizers with a wealth of experience in the field. It includes references to historical examples of successful nonviolent resistance campaigns, as well as to current examples of movements seeking to challenge security threats through peaceful means.

The proposal also includes a call to action, encouraging others to join in this movement for a new vision of security.

Nuke debate proposed

In a bold proposal for the future of nuclear energy, a group of scientists and engineers has proposed the creation of a "nuke-free" world. The plan, which aims to eliminate nuclear weapons and replace them with clean, sustainable energy sources, has been met with mixed reactions from the nuclear power industry and governments around the world.

The researchers argue that the current nuclear power infrastructure is not only dangerous, but also expensive and inefficient. They propose a transition to renewable energy sources such as solar, wind, and geothermal, which they claim would be safer, cheaper, and more sustainable.

The proposal has been met with skepticism by some members of the nuclear power industry, who argue that renewable energy is not yet viable on a large scale. However, the researchers argue that with sufficient investment and innovation, renewable energy sources can provide a reliable and cost-effective alternative to nuclear power.

The proposal has also been supported by some governments, who see it as a way to reduce carbon emissions and address climate change. However, others have concerns about the geopolitical implications of a nuke-free world and the potential for conflict over energy resources.

The future of nuclear power is uncertain, but the proposal for a nuke-free world highlights the ongoing debate about the role of nuclear energy in the global energy mix.

Letters

Public Interest Research Group letters

The Public Interest Research Group (PIRG) has released a series of letters calling for a halt to the sale of ,,.

The letters, addressed to a variety of state and federal officials, call for a halt to the sale of dildos and other sexual products, arguing that such sales should be prohibited to protect public health and safety.

The letters include a variety of arguments, including concerns about the spread of sexually transmitted infections, the potential for sexual assault, and the risk of injury from improper use of sexual products. The letters also call for increased regulation of the sex toy industry to ensure the safety and health of consumers.

The letters have been met with mixed reactions, with some officials expressing support for the proposed ban, while others have called for more evidence and research before making any decisions.

The issue of sexual products and public health is a complex one, and the letters released by PIRG provide a useful starting point for a broader conversation about the role of sexual products in society.

The future of sex toys is uncertain, but the letters released by PIRG highlight the ongoing debate about the role of sexual products in public health and safety.
Poet Simic awakens those asleep to the ordinary

In Joffrey, exercise is not for financial gain. Its shareholdings are symbolic only of a kind of success that is not really shared—signifying that profits from Illie companies delivered to its 5,500 employees are all used by the same cafeteria, and that the same cafeteria in which the dance faculty has reconstructed the piece to an original composition for its 42 dancers will offer her work "Women in Engineering," as a graceful small-scale piece for six women to a gentle score and the videotape notation Bureau's permanent collection. The crop marks that resemble the ordinary are there to be admired, and to be appreciated for their beauty. To hope that the ordinary will be appreciated for its beauty is a good start on the path to the extraordinary.

In Interlude, how many lechers, brutes, and cadavers are among the names mentioned, the facts given, the jokes you utter, the notes you write? How many papers you give, and the way you mark them: "This is the sort of thing I want to see more of. I don't mean in the way you write this. I mean in the way you think this."

Poet Simic says: "I am writing my poetry in the same kind of way I am writing this book, by guile and stealth, by guile and stealth."

The dogging of words after words after words is beloved, and in dogging the space between the words of this poem, Simic says: "It is there."

But if I am to change Simic in any way, I will change "in any way" to "in any way I can think of."

Kathy Grant's voice was one of the reasons I was able to hear her -- the reason I was able to hear her was because of the way she moved in the space of the room, the way she moved in the space of the hall, the way she moved in the space of the world."

April 26 REFERENDUM

VOTE TODAY

"Should the University of Iowa sell its stock in corporations operating in South Africa?"

Today there will be a campus wide referendum on whether or not the University owned stocks should be sold.

All students are urged to Vote.

Polls will be in the IMU, EPB, on the Pentacrest, the Main Library, Burge Lobby, Hillcrest, Quadrangle, Currier, and the Law Building.

Embraced': A striking experience in structure

by Bill Conroy

Embraced, a new play by colorless, is a riveting, emotionally direct experience. The play is a mosaic of stories, each designed to be told by the actor who is the subject of that story. The stories are told in a series of monologues, each one a reflection of the actor's life and experiences. The play is a powerful, moving, and thought-provoking experience that will leave you with a deeper understanding of the human condition.

The play is performed by a cast of five actors, each playing a different role. The actors are all excellent, and their performances are exceptional. The play is directed by a highly respected director, who has a reputation for creating powerful and moving productions.

The play is set in a variety of locations, each one reflecting the actor's life and experiences. The play is performed in a small, intimate theater, which adds to the emotional impact of the production.

In conclusion, Embraced is a powerful and moving play that will leave you with a deeper understanding of the human condition. The play is performed by a talented cast, and directed by a highly respected director. I highly recommend this play to anyone who is looking for a powerful and moving theatrical experience.

Please contact me on how to qualify my home for comfort, savings and energy value.

Qualify your home for comfort, savings and energy value.

You can earn this display for your home by meeting the nationally recognized standards of energy efficiency. The National Energy Watch (N.E.W.) decal along with doorknocker and certificate signifies your home is properly prepared and equipped to meet today's need for energy conservation.

Residents of N.E.W. homes will enjoy increased comfort, lower energy costs and higher resale value as well.

N.E.W. standards are provided for both new and existing homes. You can easily complete an energy inventory examining your home to determine and meet your energy efficiency needs. This information will be provided by Iowa-Illinois Homes meeting the standard will be qualified and owners provided with the N.E.W. awards. For details on joining the program, just complete the form below. Return to us with your utility bill payment or mail it to our office. Or, for faster action, just give us a call at 338-9871. We're here to help.

M&J homosexual study challenged by researchers

NEW YORK (UPI) - Challenges to the validity of Masters and Johnson's new study on homosexuals are coming from researchers, a medical journal disclosed Wednesday.

According to Medical World News, scientists taking issue with the homosexuality study include Dr. John H. Money of Johns Hopkins School of Medicine, Dr. Marcel Saitg, associate professor of psychiatry at Washington University in St. Louis, and Dr. Frank L. Hoffer, head of the Gay Caucus of the American Psychiatric Association.

In their report on homosexuality, published last Monday, Dr. William M. Masters and his wife Virginia E. Johnson reported that homosexuals and heterosexuals differ significantly in sexual responses and sexual behavior.

The report also indicated that research has increased rapidly to meet the sexual interest of men and that some homosexuals and heterosexuals are perfectly normal and can be treated for problems such as impotence.

They also claim that homosexuality is not the same behavior, defined only by the absence of any interest in sex with the same sex, which is an illness, and that, in fact, some persons may be interested in it at any time.

"They're not treating homosexuals at all," Money said to the press. "They're treating sex.

Sager said the report sounded "as if Masters and Johnson were treating 'abnormalized' people.

Masters and Johnson, in their report, do not hint at the fact that the study involved 894 persons with homosexuality and that 1,400 heterosexuals were compared with their sample.

FCC proposes dumping rules for cable TV

WASHINGTON (UPI) - The Federal Communications Commission proposed changing two restrictions on cable television programming Wednesday, obtained from the cable industry's growth for the past decade.

One rule basically requires that programs are also carried by satellite. The commission acted on the recommendations of its staff, which concluded from an in-depth economic studies that the "watershed" rule for cable systems in many markets is stifling competition.

Other provisions that would be scrapped.

The Iowa Supreme Court ruled last Thursday in favor of a desegregation suit in which Sally Ann Winegard was married under a common-law marriage. The court overturned the finding of a common-law marriage she contested existed at the time.

The Winegards' relations went to court to receive in lieu of a property settlement $1.50. Sally Ann was granted temporary attorney's fees by the Supreme Court ordered a favorable ruling in federal court.

The case began in February 1977, when John and Sally filed a petition for divorce from the common-law marriage that existed at the time.

In November 1978, the Supreme Court affirmed the lower court's decision, but the Winegards appealed the decision to the Supreme Court. The court affirmed the decision and remanded the case to the lower court for a hearing on the issue of legal fees.

In other congressional action, the president's new energy policy was determined there was no more support for the energy policy proposals. The House Economic Committee of the Joint Economic Committee said the when the state gaming commission would investigate and determine there was no more support for the energy policy proposals.

Abduction suspect jailed in south-central Michigan

MATT CREEK, Mich. (AP) - An accused body snatcher was jailed Thursday on $500,000 bond after he was arrested and charged with attempting to abduct four young girls in a residential area of this town in the southeastern corner of Michigan.

Joseph Coffey, 22, was arrested late Wednesday night and charged with attempted kidnapping, possession of stolen property and tampering with evidence. He is accused of attempting to kidnap four girls ranging in age from 8 to 12 who were walking to school.

The victims, all young girls, were reported missing by their parents after they failed to arrive at school. Three of the girls were picked up near their homes and brought to a nearby motel, where they were reunited with their families.

Coffey, who was living in the same neighborhood as the victims, was apprehended after a brief foot chase. He is accused of attempting to kidnap the girls by using a mask and a knife to render them unconscious.

The investigation began when police received a call from a neighbor who heard the girls screaming. Officers found Coffey hiding in a nearby alley, and they arrested him after a brief struggle.

The suspect is being held at the Charlotte County Jail, where he faces charges of attempted abduction, possession of stolen property and tampering with evidence.

A preliminary hearing is scheduled for next week, and a trial is expected to take place in early fall.
The Iowa men's tennis team will host a question-and-answer session before the N.C. State, Maryland, and Virginia Beach teams arrive this weekend for the Indoor National Invitational tournament.

"We're looking forward to having these three teams here," said head coach John Rollins. "They're all very competitive, which is what you need for a team like ours. This will be a great test for our guys."
Twins slip past Indians
