City on lookout for ‘Lady’

By ROLY BURKHARDT

A crowd of candidates hoping to fill the last Iowa City Council seat will be facing obstacles in their bid to win on Tuesday. With several candidates vying for the position, each looking to win the seat.

Prices take near-record leap

By ROLY BURKHARDT

Food and beverage prices are soaring, as the overall consumer price index rose 60.8 percent in a single year. Prices take near-record leap, according to the Bureau of Labor Statistics, which compiles figures based on a survey of consumer prices.

Illegal pesticide sale prompts UI study

By ROLY GRIFFIN

Federal prosecution for sale of restricted pesticides has prompted a study of the effects of pesticide use, according to the Environmental Protection Agency. The EPA, responsible for enforcing federal pesticide laws, has undertaken the investigation.

Commission: Woodfield’s owner guilty

By LIL BROWN

A man called in to say that a dog like Lady was reported missing in downtown. The owner, a man, said he was looking for his dog, Lady, who had a red collar and was wearing a sharpie collar. He was also carrying a brown bag, which he had left behind.

Commission: Woodfield’s owner guilty

By LIL BROWN

Amidst the hustle and bustle of the city, a man was spotted carrying a brown bag, which he had left behind. The owner, a man, said he was looking for his dog, Lady, who had a red collar and was wearing a sharpie collar. He was also carrying a brown bag, which he had left behind.

City manager: City will lose Eaton case

By ROLY BURKHARDT

Despite the efforts of the city manager, the lawsuit filed by Linda Eaton was dismissed. The city’s legal team will continue to fight for its rights.

UI receives increase on gasoline allocations

The Daily Iowan, June 13, breaking a trend until August 30, when we will add the first fuels to the day.

The Iowa City Council will make a special meeting to discuss the future of the gas allocation at the beginning of the fiscal year.

Joe Scherer

Oil spill cleanup delayed

Mexico City, Mexico (UPI) - Mexico's Environmental Secretary said today that the cleanup of the oil spill in the Gulf of Mexico, by which time the oil will have been reduced, should be completed within the month. The cleanup will take place in the next 30 days.

The Secretary of the Environment and Natural Resources, başkent, said today that the spill had been contained and that the cleanup process was near completion. The spill occurred two days ago and was caused by a pipeline rupture that led to the release of 4.5 million gallons of oil into the Gulf of Mexico.

The spill, which occurred near Campeche, is the largest in Mexican history and has caused widespread environmental damage. The government has declared a state of emergency and has mobilized resources to contain and clean up the spill.

Governor Santiago Allan, the governor of the state of Campeche, said that the spill had caused significant damage to the local economy and that the cleanup process would take several months.

Eaton

Last March the commission found the oil-burning heaters a fire hazard and prosecuted them against Eaton. After heated debate, the commission appeared to be on the verge of a vote to allow the two to fly in front of a second-story window. In the end, the vote was 2-2. Eaton was not allowed to fly.

*IF THEY GO on the month of the year, Eaton, & I will fly. * Eaton said. "I suppose we'll get a little bit of controversy now and in the end, the people have the last say in the end.""

---

Millard said he was going to appeal to the U.S. EPA in Washington, D.C., but the oil-burning heaters are still in place.

---

I didn't know it was illegal (to sell vaporizers)," Millard said, "but I didn't deep it was, just selling it. And if he had said I wouldn't have sold it.

---

...you can't do that. "I think he was a good man and I think the city has a pretty fair record. They only had to remove the vaporizers, and they didn't want to do that."

possible with plans take so long to be made. The UI should comply as quickly as compliance with very real possibility."

stantially not in compliance at the present time, John Houck, outward the director of the physical plant, said that there are "a very real possibility."

Houck said that there have been no temperature adjustments initially in the physical plant made at any UI buildings, pending compliance approval, and that "everythings hangs on the action of the customers.

Prior to the moving, the list of buildings to beespèred from the rule included all UI Hospital related buildings, dormitories, the UI Museum of Art, and areas housing animals, plants and sensitive research.

The last survival the moving essentially exchanged, with the addition of the UI Library System. Discussion regarding a speedy implementation of the regulation was conspicuously absent.

Houck himself said that, "Internally, we're not in a terrible trouble."

If he were aware of the problem and the committee has been informed as early, he said, everyone is agreed that the rule itself is the problem. Why the apparent lack of openly administrative action? Not proceeding with open public apology is said to create confusion in both equity counsel and is fees tolled by the Department of Energy.

At some point following the discussion of the meeting, the list of proposed equipment included in the Boulder Department for approval, the physical plant will then make modifications in the existing facilities.

It is unfortunate that the wheels of administration power by lawsuits are especially effective, though the UI is making its own plans to take long to be made. The UI should comply as quickly as possible with the 39 degree guidelines.

BARBARA DAVIDSON

refugee exodus

who will take responsibility?

Last weekend's International Conference on the Flight of the VIetnamese Refugees has made some progress toward laying what Carter described of the Philippines called, "a wound of conscience of our world."

The 56 participating nations pledged to take 28,000 refugees this year. The most drastic action taken was President Carter; he directed the number of refugees to be taken in by the United States from twenty to a total of 50,000. Other resettlement programs have also been set up for the first time in the United States.

Vietnam has apparently agreed to try to stop the flow of refugees for a month to allow for the establishment of refugee processing centers within its borders. Both offers are definitely within the limits of the visas category, under normal circumstances few would find closing national borders and concentrating camps anything to their advantage.

It is to be hoped these are not normal circumstances. Almost anything which makes the rate of the refugiate in and out of the United States is upheld and it has been an observed practice for years to escape at 30,000 to 40,000 per month since May.

The government of the United States, whose colonial and neo-colonial activities did much to cause and exacerbate the problems in Vietnam, bear a heavy responsibility and they should assume it.

Slow university progress on energy guidelines

The UI Energy Conservation Committee met for an hour and a half Thursday afternoon to review guidelines for and progress toward compliance with President Carter's guidelines regulating all thermal equipment. As far as the committee is aware, an overall time of five years has been established to come up with a formula whereby the UI could comply as quickly as compliance with very real possibility.

The regulations have been in effect since July 16; any violation of the regulations would result in a 25 cent charge per month, per month. In the case of a heat control of 140-145 degrees, the charge would be 25 cents.

Upgrading of UI computer system begins
The old 3.5-inch magnetic disk will be replaced by a 5.25-inch disk which will allow the Wang Computing Center's 3200 kilowatt punches per second computer to replace it, according to Anne Johnson, acting director ofpatient Care Services.

"Old Hard," as she jokingly refers to the puncher, will be replaced next week. The puncher is 13 years old and has a capacity of 100,000 punch cards per hour.

Johnson said the new machine will have a capacity of 300,000 punch cards per hour and a memory capacity of 1,000,000.

"We're quite excited that the old machine will be sold for $300 and that we can bid for the machine if we need it," Johnson said.

Hagedorn wants a field her team can call home

By DOUG BEAN, Sports Editor

The Iowa softball mound is a far cry from the wide-open field where Hagedorn grew up playing baseball.

In fact, the Hawkeyes have never had their own field. In June, the NCAA granted the intercollegiate softball program the much-needed go-ahead to proceed with plans to build a facility on the west end of campus, a project that will cost more than five years before it sees the light of day.

But even without a home, Hagedorn has been optimistic about the future of the program.

"I Standings..." she said. "It seems to materialize," she added.

And Coach Jane Hagedorn knows what she's talking about.

Her team has never had a home of its own, nor has it had a chance to make a name for itself until this spring.

"They have always been a hard-working team, and they have always been a competitive team," Hagedorn said. "They've just been fighting to get a chance to play on the road.

"They have always played the best of anyone else, and they've always been a hard-working team. And now they have a chance to play at home."

The program, which began in 1980, has played its entire schedule on the road this year.

"I'm excited about the possibility of having a home," Hagedorn said. "It's been a long time coming."

The program has been trying to get a home for years, but the university has been hesitant to commit the money needed to build a facility.

"It's been a long time coming," Hagedorn said. "But now we've got a chance to play at home."

The program has been relying on the support of the fans and the community to keep it going.

"We've been able to keep it going because of the support of our fans," Hagedorn said. "They've been a big part of our success."

The program has been able to attract players from across the country, and they've been able to compete with the best of the best.

"We've been able to attract players from across the country," Hagedorn said. "We've had a lot of success with our players and our coaches."
