**Council: City needs strong development**

By Howard Haye

Assistant City Manager

The well-being of Iowa City is inseparably linked with that of the University of Iowa. As the University's academic calendar takes hold at dawned UI, so too do the new faces, the new ideas, and the new opportunities that are needed for the U.S. Department of State. These faces and ideas are needed to develop UI's College of Engineering and to establish the university's social science programs.

The UI will be held at 3:30 p.m. at the UI Campus Center, Room 2A. The meeting will be open to the public.

EPA changes to local approach

By Jennifer Starling

The national agency responsible for protecting the environment will hand over some of its powers to states under the Reagan administration's new array of initiatives.

John Franko, administrator of the Environmental Protection Agency in Denver, said Tuesday during a visit to the city that the EPA will assume the status of an actor and set aside environmental standards in favor of a more active approach to making standards meet.

"WE'RE figurin out that the way we used to work, on a results - and good environmental results - seemed worse, " Franko said. The agency's new approach for EPA has been defanged, and not only for the good of the nation, but for the good of the Republic, Franko said.

Franko's speech, sponsored by the IEI Division of Sponsored Programs, attempted to explain the agency's new direction. The agency administrator insists standards governing clean air and water and land and waste will be set by the states and the local government.

The local government's program will be in place of federal standards as a local law, Franko said. By allowing the states and local governments to set their own environment standards, the EPA will be in line with the Constitution's "necessary and proper" clause that gives Congress the authority to make laws necessary and proper for carrying into execution the Constitution's provisions.

Franko presented the new approach as a win-win situation for the state and the federal government. By allowing the states and local governments to set their own environmental standards, the EPA will be in line with the Constitution's "necessary and proper" clause that gives Congress the authority to make laws necessary and proper for carrying into execution the Constitution's provisions.

The states will be able to move more quickly and more efficiently, he said. The states also will be able to act quickly on other areas, he said.

At the same time, the EPA's new approach will not mean a loss of power for the federal government. The EPA will continue to establish federal standards, but the states will be able to set their own standards in line with federal standards.

Franko said the new approach is a "win-win" situation for the state and the federal government. By allowing the states and local governments to set their own environmental standards, the EPA will be in line with the Constitution's "necessary and proper" clause that gives Congress the authority to make laws necessary and proper for carrying into execution the Constitution's provisions.

"We're figurin out that the way we used to work, on a results - and good environmental results - seemed worse, " Franko said. The agency's new approach for EPA has been defanged, and not only for the good of the nation, but for the good of the Republic, Franko said.

WASHINGTON (AP) — Former President Reagan was in good health on Tuesday, although his ability to communicate remained limited, aides said.

Reagan was speaking on the phone to a friend and was able to answer only yes or no questions, according to aides. Reagan has been in a coma since Saturday night, when he suffered a stroke.

Reagan, 93, is the longest-serving U.S. president and his stroke was the first to occur in his term. He is the second oldest living former president, after Jimmy Carter, who turned 93 in October.

Reagan's stroke was confirmed by his doctors and family members, who said he is in critical condition. The doctors said Reagan is being kept comfortable and that his condition is stable.

Reagan's family released a statement saying they are blessed with the love and support of so many people around the world, and that they are grateful for the prayers and good wishes they have received.

Reagan, who served as the 40th president from 1981 to 2001, was known for his strong leadership and for his ability to communicate with Congress and the public.

In addition to his political career, Reagan was a successful actor and was nominated for an Academy Award for his role in the film "The Best Years of Our Lives" in 1946.

Reagan was a member of the Republican Party and was the first president to serve two full terms as president.

The family said Reagan's wife, Nancy, and children are at his bedside and are receiving updates from his doctors.

Reagan's stroke comes as the country is mourning the loss of another former president, George H.W. Bush, who died on Friday at the age of 94.
Anti-Reagan speeches receive cheers of AFL-CIO delegates

WASHINGTON (UPI) — Construction union leaders cheered and whooped Tuesday at a Democratic National Committee meeting where Walter Mondale attacked presidential hopefuls Edward Kennedy and George Meek, said Tuesday.

Mondale, acting chairman of the Democratic National Committee, said the Kennedy-Meek ticket is "the group today," if it is one of the likely topics on the minds of the national committee's meeting.

Weicker called for the opposition to organize against Reagan's policies.

"For the first time we have evidence that the real, economic problems and personal survival in our country are being anticipated and understood," he said to a murmur of applause.

"He's been saving all the money, everything," Mondale added. "That's the man where the Goose Egg single is at.

He reminded the group that in his 1968 campaign, Reagan had the theme of 'jobs, jobs, jobs.' "In 1976, I'm going to say jobs, jobs, jobs, and he too failed," Mondale said.

Researcher unveils 'tested' device allowing communication with dead

WASHINGTON (UPI) — It is now possible to communicate with the dead through electronic instrumentation and psychic energy, and this may have a practical application in such fields as combos, communications, and medical research, according to the late Dr. George Mark, who directed a $15,000 research project, introduced at a science conference at a work center here.

"There is an existence probability of a paranormal plane that would allow the living to see us as well as speak to us," said Dr. Mark.

The conference was attended by members of the scientific community and their wives, a dozen of whom were asked to demonstrate their abilities.

The group made up a small knot of people who believed in communicating with the dead.

The group looked into conventional scientific issues, "to conduct their own research after studying his findings.

"I call him an 'applied science' to bring people to the thinking in a scientific test, to do something constructive to the present and future of people," Dr. Mark said.

The conference was held as a part of a convention in London, the speaker presented his thesis.

"Because he's left behind, and the possiblility of a communication between the living and the dead is now possible," the speaker said.

"In 1980, he said, "the possibility of communication is now possible," the speaker said.

"I believe the possibility of a communication between the living and the dead is now possible," the speaker said.

"In 1980, he said, "the possibility of communication is now possible," the speaker said.

"Our findings to every conceivable test to find that the possibility of a communication between the living and the dead is now possible," the speaker said.

"We are so 'far out' of our proper y understanding, our understanding of the possibility of communication between the living and the dead is now possible," the speaker said.

"Our findings to every conceivable test to find that the possibility of a communication between the living and the dead is now possible," the speaker said.
Westinghouse presents policy proposals

A plan to provide Johnson County voters with a hand-marked voting system, including a hand-marked voting system, a scanner, and a tabulation system. The plan was presented by the Johnson County Board of Supervisors. The plan was developed in response to the findings of a report from Westinghouse Information Services, which recommended a new system to be considered by the board with the hope of implementing it for the November 18 election.

Shocking

A day early emergency treatment at Mercy Hospital in Cedar Rapids, Iowa.

Radioactive materials were found in a paper bag at the hospital.

Mendelson, Michael, who works for the Department of Radiation Safety, said he was able to remove 80 million dollars in materials from the bag.

The bag contained a small amount of radioactive material.

Monday, that the decision initially was made.

Johnson said that the decision was made to remove the material from the bag.

Many of the officials who were present at the meeting said that they were shocked.

“Tm, the decision was made to remove the material from the bag because it was found to contain radioactive material. It was determined that the material was not hazardous and that it was safe to remove it,” Johnson said.

In other news, the Iowa Board of Education announced that they would be considering the option of providing free breakfasts to all students in the state. The board is expected to vote on the issue at their next meeting.

Toxic

The vaginal tract is a wall, a wall that provides a barrier between two different environments. It is a wall that protects women from infection and allows them to have healthy babies. It is a wall that can be damaged by tampons.

Tampons are inserted into the vagina, a small, narrow opening in the body, to absorb menstrual fluids. The tampon is made of cotton or other absorbent material and is inserted into the vagina, where it absorbs menstrual blood.

However, tampons can cause problems if used incorrectly. If tampons are inserted too far into the vagina, they can cause pain, discomfort, and even infection.

Johnson said that she thinks that the decision to remove the material from the bag was made because it was found to contain radioactive material.

It was determined that the material was not hazardous and that it was safe to remove it, Johnson said.

In other news, the Iowa Board of Education announced that they would be considering the option of providing free breakfasts to all students in the state. The board is expected to vote on the issue at their next meeting.

continued from page 1

The medical community is not sure why this happens. Some researchers believe that the immune system is not functioning properly, and others believe that the body is responding to a harmless substance.

Some women are more likely to develop the disease than others. This is true for many reasons, including age, race, and lifestyle.

Researchers are trying to figure out why some women develop this disease and others do not. They are working hard to develop a vaccine that can prevent this disease.

In other news, the Iowa Board of Education announced that they would be considering the option of providing free breakfasts to all students in the state. The board is expected to vote on the issue at their next meeting.

Preserving farmland

Iowa County has the chance to participate in a pilot federal program designed to help farmers make intelligent land-use decisions. County supervisors have said they need more information and land-use rules that they can turn to, but the offer to put part of the program in an area that should not be made.

The program is sponsored by the Iowa office of the U.S. Soil Conservation Service. It is intended to help the SCS that the best way of implementing the recently passed Agriculture Protection Act, among others, is to work with the states to preserve the nation's prime agricultural land.

If accepted by county supervisors, the program will inject exactly which areas in the county are best suited for agricultural land use, and which should be better adapted to industrial or residential development. A two-phase study will be initiated, beginning with a written statement of the county's land-use decisions. A final report will be prepared that can determine the benefits of participating in the program.

The results will provide county planners and supervisors with valuable information about which land-use decisions can be based on the findings of the land-use decisions in the county.

County supervisors would be under no legal obligation to act on the findings of the study, but the finality of the finding will make them more likely to be asked to consider these decisions.

Land-use planning in Iowa County has long been considered an important consideration, particularly in the more densely populated areas. Participating in the SCS program will give county officials a quick and easy solution. However, the program can help ensure that the land-use decisions that must be made will be based on the best possible information. County supervisors should at least be interested in taking advantage of the offer.

Export implications

According to Iowa Secretary of Agriculture Robert Leonard, creating a "green market" for Iowa farmers may prove to be of great benefit.

Farmers have exported over $7 billion in agricultural goods during 1981. The lands where these products are sold cover 110,000 acres in every county in the nation.

Though this may seem like a large amount of land, the state reminds us that the cost of fostering a "green market" for Iowa farmers may prove to be of great benefit.

Information from these alternative sources may, in some cases, be useful to the farmers in selecting alternative sources of income. For instance, a knowledge of the availability of alternative sources of income may be useful to the farmers in selecting alternative sources of income.

Iowa's agricultural products help keep our steady income stream. Iowa's farmers have a direct line of communication in land-use decisions. In the past, this line of communication has been heavily relied on by the farms of the state. In the future, Iowa's farmers may need to look for other sources of income. Iowa's farmers may need to look for other sources of income.

Iowa's farmers have an important role to play in land-use decisions. In the past, Iowa's farmers have been heavily relied on by the farms of the state. In the future, Iowa's farmers may need to look for other sources of income. Iowa's farmers may need to look for other sources of income.

Applying for the Daily Iowan:

Apply now!

The Daily Iowan is now taking applications for editors and reporters for the summer and fall semesters. Editors must be on-campus students, qualified to write and familiar with the workings of a daily newspaper. Reporters must be hard-working and enthusiastic, with a commitment to accuracy and good writing. Journalism experience is preferred, but not required. Telling applications for:

Managing editor
News editor
Metro editor
Assistant for university news
Assistant for feature
Wire editor
Photo editor
Sports editor
Assistant sports editor
Editorial page editor
Letters editor
Reporters and writers
Copy editors
Graphic artists
Photographers

Work for an award-winning newspaper! Pick up applications in Poynter 111 or 206N, Communications Center. Deadline: Friday, April 8.

Augusta National course preview

Augusta, Ga., off - Profile of the Augusta National course will be on page 108 of The Daily Iowan on April 9. Buddy Lewis of Des Moines will be on hand to describe the 6,891-yard, par-72 course and to give advice to golfers on the strategy required to play it for low scores. The course is closed this week.

Masters

The Masters Tournament begins tomorrow with a first-round pro-am round followed by four days of competition. The 43rd Masters Tournament will be held April 16-18, in conjunction with the 13th Annual Coors Intramural Sports Festival and the 9th Annual Riverfest. There will be three divisions in the Intramural Sports Festival: men's, women's and co-ed. The Festival will be held at New Ulm Field in downtown Iowa City on April 16-18, and Coors Intramural Sports will sponsor the Riverfest this year. The Coors Intramural Sports Festival has medicine ball games and other activities, with $800 in cash prizes distributed at the close of the Festival. For further information on the Coors Intramural Sports Festival, call 320-6926.

NCAA Intramural Sports Festival

The Coors Intramural Sports Festival will offer a cross country tournament set for April 15, 4 p.m. to 6 p.m. on the old University of Iowa golf course, with parking at the old football stadium. The Festival will be open to all participants, including non-students. For further information call 320-6926.

Cheever's newest borders

By T. Johnson

Cheever's newest borders are found in his new short story, "A Lesser God," which examines the world of the deaf.

The novel, "A Lesser God," is a satirical look at the lives of the deaf, who are often misunderstood and underestimated by society.

Cheever, known for his linguistic prowess and ability to capture the essence of the American experience, has crafted a work that is both poignant and humorous.

The story follows the lives of two deaf women, one of whom is a struggling actress, and the other a successful businesswoman. Through their experiences, Cheever explores themes of identity, acceptance, and the challenges faced by those who do not conform to societal norms.

Cheever's writing is characterized by its precise language and keen observation of human behavior. In "A Lesser God," he uses a mix of humor and tragedy to highlight the absurdities of the world around his characters.

The novel is a testament to Cheever's ability to create complex, multi-dimensional characters. Each of the main characters is richly drawn, with their strengths and weaknesses clearly defined.

"A Lesser God" is a powerful exploration of loss, love, and the human spirit. It is a story that will stay with readers long after the final page is turned.

Cheever's latest work is a reminder that, even in the face of adversity, people can find beauty and meaning in their lives.
Brahms began the massive piece in 1857 but not completed all but the soprano movement. The performance of the text, "German Requiem," is thy victory? "Death, where is thy sting? Grave, where is thy pow'r?" No Memberships
