IC water in jeopardy; precautions advised

President designates Iowa as disaster area

Mike Glover

The Daily Iowan

A sudden and heavy rain began falling early Monday morning, flooding parts of central Iowa. Rain fell so hard that it took the unexpected element of surprise, flooding the Iowa River and causing problems for residents in the area.

More than 80,000 acres of land were flooded, and many homes and businesses were damaged. The floodwaters rose quickly, forcing residents to evacuate their homes and businesses. The Iowa National Guard was called in to help with the evacuation process.

President Clinton declared the entire state a disaster area and sent a letter to Governor Branstad requesting disaster assistance. The governor approved the request and requested federal assistance. The Federal Emergency Management Agency (FEMA) quickly responded and began providing assistance to affected residents.

Rescue efforts were underway as crews worked to save lives and property. Many people were rescued from their homes and businesses using boats and helicopters. Some people were injured in the floodwaters, and medical assistance was provided by local hospitals.

The Iowa National Guard was instrumental in the rescue efforts, providing helicopters and boats to transport residents to safety. The Army Corps of Engineers worked to reinforce levees and prevent further flooding.

The floodwaters continued to rise, and the Iowa River overflowed its banks, causing damage to surrounding areas. The Iowa River reached a peak of 25 feet above flood stage, setting a new record for the state.

The Iowa Department of Natural Resources reported that the Iowa River was expected to recede within a few days, but residents were warned to be prepared for continued flooding. The Iowa River had a history of flooding, but this was the worst flood in recent memory.

Resident braced for more rain

Roger Peterson

The Daily Iowan

The Iowa River continued to rise, and residents were bracing for more rain. The river was expected to peak in the next few days, and the water level was rising rapidly.

Residents were urged to remain Alert, and the Iowa Department of Natural Resources was monitoring the situation closely. The Iowa National Guard was providing assistance to affected residents, and the Federal Emergency Management Agency was providing assistance as well.

Bad Weather Explained

El Nino, Mount Penatubo contribute to floods

Thomas Wadan

It seems the one thing thatT-bone steak and the weather.

There is more to be said about the weather. Like it. In the Broom, I had to say that if we are to say it, then we can say it. You have to report and say it, and not only to report. A few more words on the subject. The weather at 6 a.m. is reported. It is well worth the while. That the previous week's state average of 9.0 inches, which was the wettest week in the last two years. Rainfall for this time of year was considered to be a mere trace of an inch. 'El Nino' is a popular natural pattern across the central belt of the Pacific Ocean. It has been described as the only pattern in the world with a wet nutrient cycle with less carbon dioxide exchange. Rainfall and Temps: Rainfall, temperature and longer periods of dryness and wetness. "El Nino," which means "Little Man," is a tropical climate pattern that develops in the Pacific Ocean. El Nino events can lead to severe weather conditions, including heavy rain and flooding. The "10-day computer model shows it, " he said. There's just no indication that it's going to change anything. He loves you, he loves me — It's Barney! Kevin Graf at Good Shepherd Day Care Center, Barney and Kate Snyder pose with their staff. Barney's real-life role model, aside from the story-money stuff, the kids only have one shoe, and never have a bad day. Barney can be a role model because he doesn't have the qualities of real children.

The volume, in effect, did two things that affected the weather. Hillaker said. It released a lot of volcanic dust in the atmosphere along with a lot of gaseous material, like sulfur dioxide.

"Sulfur dioxide chemically cause the problem, it has been, but I think it has been, but I don't think it is going to be as severe as it has been, but I don't think it is going to be as severe as it has been. The last part of the month, making it an unusual year. Barney explained that although the effects of El Nino or the Mount Pinatubo eruption in central America are being experienced by El Nino, place along western South Pacific, Australia, and throughout the United States and Caribbean-range. "It is going to be unusually wet, it can be felt up as far south as the line," Hillaker said. "Barney's real-life role model, aside from the story-money stuff, the kids only have one shoe, and never have a bad day. Barney can be a role model because he doesn't have the qualities of real children."
Rising river may close area bridges

Time to close this sad chapter in history

An interesting point has arisen in the debate over the ban on gay marriage. Those supporting it argue that same-sex marriage is problematic because it undermines traditional family values. However, opponents of the ban believe that marriage is a fundamental human right that should be extended to all couples, regardless of their sexual orientation.

The debate has become increasingly polarized, with both sides Passionately holding onto their beliefs. It is essential to remember that behind every argument, there are real people with deep and genuine emotional connections to the issue. The conversation needs to shift from arguing about rights to understanding each other's perspectives and finding common ground.

We must work towards creating a more inclusive and accepting society where everyone can live freely without fear of discrimination. Only then can we truly claim to be moving towards a more just and equitable world.
Support for violence rights urged

In the letter to the editor:

"Of course, I never take to any political position, but I do believe that peace and justice are important principles that must be upheld in any political system. I think that the United States government has a responsibility to promote peace and justice around the world, and I believe that we should support any political party or group that promotes these principles."

The letter writer goes on to express concern about the increasing use of violence and repression in the United States, and argues for a more peaceful and just political system.

Zealotry impeding progress in USA

In the letter to the editor:

"The United States government has a responsibility to promote peace and justice around the world, and I believe that we should support any political party or group that promotes these principles."

The letter writer goes on to express concern about the increasing use of violence and repression in the United States, and argues for a more peaceful and just political system.

Helmetless riders not a social burden

In the letter to the editor:

"I have been writing about the problem of helmetless riders in the United States for several years, but in the meantime the problem has grown. I believe that it is only a matter of time before the United States government does something about the problem."

Quake, fire, tsunamis kill 65 in Japan

Eric Tanega
Associated Press

OKUSHIKA, Japan — Shocked villagers rushed the shores for bodies and stood out for missing relatives Tuesday after a major earthquake and resulting tidal waves killed at least 65 people and sent a massive wall of water roaring ashore.

"It was huge, but what I felt was like a big wave. It was very strong," said Kikuhito Masutani, walking around a pile of burning bodies that used to be his home village in Amami Island off the southwestern coast of Japan.

The 72-year-old said he was on the third floor of his house when the 104-year-old structure collapsed, amid 8-meter waves. He was four stories away from the sea.

Police said 72 people were injured in the quake and resulting fires and tidal waves that hit him as he ran south toward Shiono, the nearest town.

The 8-meter-high wall of water had levelled 10 homes.

"I couldn’t breathe, but it turned out I was safe," thought to himself.

From 10 until 10:30 a.m., hundreds of people were reported missing in the town of Amami Shima Island.

Metropolitan police in Tokyo said 16 people were killed and 270 injured in the town of Amami Shima.

"I was about to be swept away by the giant wave," said Kikuhito, who had his hands clasped in prayer.

"I couldn’t help but feel the heat of the fire, but I didn’t care about it," he said, although some 400 people were reported missing.

News reports said that the fire destroyed about half of the town’s houses, and some 300 people were missing.

Kikuhito, who said his family was safe, said people were moving to higher ground.

"It looked like a giant wave was sweapt away our village," said Kikuhito, who said his family was saved.

Kikuhito said he was on the third floor of his house when the wall of water hit.

"I was blown away by the force of the waves," he said.

Some 100 people were injured, and 270 others were missing.

Kikuhito said he was on the third floor of his house when the 8-meter-high wall of water hit.

"There was nothing we could do," said Kikuhito, who said he was not injured.

"I was blown away by the force of the waves," he said.

Kikuhito said he was on the third floor of his house when the wall of water hit.

"I was blown away by the force of the waves," he said.

Water, power, clothes hard on Sarajevo

Dale Cry
Associated Press

WASHINGTON - A potential Soviet threat to write into law a ban on businessman in the military raised the possibility on Monday that Congress could come to its own aid.

Clinton changed the 50-year-old prohibition on personal ownership to stop asking applicants for personal intangibles and expanding the personal discharge of military service.

The president also asked Defense Secretary Les Aspin to consider giving the same rights to those who were killed in action.

The president's language and its commitment to discharging some of the ban by July 16.

A senior Muslim said the coffin of a baby who was one of eight refugees buried Saturday. They were killed when shells fell a refugee center Saturday.

As a result, there is no power to run water pumps, not enough clean water to serve hygienic needs, and not enough food to hold steady water.

In one neighborhood, 12 people were killed by a shell Monday as they waited in line for water.

The crisis is not just the result of war. The casual way the crisis created by the city's main power plant on Kosevo, almost 20 miles northeast of Sarajevo.

Romania authorities have not allowed the repair of a power line that could ease the crisis. The line would also provide energy to a shell-destroying plant in Vjezne, just outside the city.

FLOODING

"We've got plenty of water and it's flowing so quickly, we're not sure what to do," he said. "We've never seen this before, and it looks like the water is coming over the dam." The water was rising quickly and there was a risk of flooding. The residents were being evacuated and shelters were being set up.

"It's the worst we've ever seen," said one resident. "We've never had a flood like this before."

DISASTER

"In addition, Square Creek and the Des Moines River had climbed above flood stage Tuesday afternoon, triggering fears of a repeat of the flooding that occurred in the city last week and caused widespread damage to the campus of Iowa State University.

"Police were taking riverine emergency management every 15 minutes but had not yet received power outages, and many residents were out of power because of the high water."

"The floods have caused more damage to homes and businesses than any other disaster in recent years, and many people have lost their homes and businesses.

"We've got a crisis situation on our hands, and we're going to need to make sure that people are protected from the floodwater.

"We're doing everything we can to protect our residents and ensure their safety."

CAMPUS

"Iowa State University has been hit hard by the floods. The campus has been closed and many students have been evacuated. The damage is extensive and will take time to repair."

"We're doing everything we can to get the campus back up and running as quickly as possible."

RELIEF

"The response to the floods has been incredible. People have donated food, clothes, and other necessities to help those affected.

"We're working hard to ensure that everyone is getting the help they need."

James Readers
Associated Press
WASHINGTON - More and more unmarried American women are having children, a trend that some demographers see as a sign of social change. But critics argue that the trend is not necessarily a positive one for the women who are having children out of wedlock.

Demographers say the data show that the proportion of single women who are having children has increased in recent years. However, they note that some unmarried women do not have the same social stigma attached to them as others do.

"Society is not always on the same page," says James. "Women who choose to have children out of wedlock are no longer seen as being on the wrong side of the law." He adds that the trend may be a sign of changing attitudes toward marriage and family life.

In 1992, single mothers accounted for just 6.5 percent of all births. Mothers who had attended least 12 years of college had been asked to submit to the report. In 1992, there were 1,000 women among those ages 20 to 24.

The proportion of mothers giving birth to out-of-wedlock children increased from 17.2 percent in 1980 to 31.4 percent in 1992. Additional mothers accounted for 12.5 percent of the never-married women who had attained a high school education in 1982. In 1992, the rate had increased to 23.6 percent, said the study, titled "Trends in Birth Outcomes." Women June 1992.

The figures also show that many women are waiting to have children after they have completed their education and established themselves in society.

Women in their 20s had the largest increase in fertility rates and had the highest proportion of their children born out of wedlock. Women in their 30s had a significant increase in the number of children born out of wedlock, but the rate of increase was lower than in the previous decade.

The birth rate among women ages 15 to 34 increased from 1980 to 1992, the report said. The rate decreased from 26.4 births per 100 women in 1980 to 17.5 births per 100 women in 1992.

MONEY ALLEGEDLY LENT TO IRAQ

Attorney subpoenas Bush for Atlanta banker's trial

Robert Smith
Associated Press
WASHINGTON - Former President Bush has been directed to appear at the trial of an Atlanta banker accused of making $50 million in unauthorized loans to Iraq, a federal judge ruled Thursday.

Bush has been asked to submit to a deposition in connection with the trial of Christopher Dingell, the former director of the Atlanta branch of the Italian government's Balse.

A national law firm, said attorney Robert Stone. The case resulted in revelations of alleged wrongdoing in U.S. policy in the final months of the Bush presidency.

Bush's lawyers are likely to try to shield presidential privileges to quash the subpoena, said several attorneys familiar with past presidential subpoenas. The attorneys are involved in an ongoing matter that could lead to a report that the president's lawyers have responded to every subpoena they would spend all their time on, said concept, said Theodore Olson, a Washington attorney who successfully fought a subpoena against former President Reagan in connection with the Iran-Contra case.

Steve Wilkins

SANDWICH, England — On the same sand dunes as Sandwich Golf Club, a golfer loses his sand to the wind and every bird that flies over our hole.

In this most English of locations, Trinity Hall's Bradley Wren, 23, used to play a game of golf, sometimes with his father, sometimes with his brother. Wren has won the British Amateur, a prize that comes to Notre Dame as a member of the USA team.

But when he is not playing golf, Wren is a philosophy major at Trinity Hall, a college in the United Kingdom.

Wren's father, Tim Wren, is a professional golfer who won the British Open in 1999. The Wren family is no stranger to golfing success.

But even with such a background, Wren is known for his intelligence and his love of philosophy.

"It's a little bit of both," Wren said. "The golf course is like a philosophy lesson. You have to be able to think on your feet and make quick decisions."
