Diversity Day

The world is a big place. One way to learn about it is to participate in Iowa's Cultural Diversity Day. The event, sponsored by the Office of the President, will be held on the UI campus on Thursday, February 20.

This year's theme is "Round the world in a day." The event will feature a variety of cultural performances, including music, dance, and storytelling. Attendees will have the opportunity to experience a range of cultures from around the world, including African, Asian, and Middle Eastern traditions.

The event will begin at 10:00 a.m. with a welcome address by UI President Bruce Harreld. The program will include a variety of performances, including African drumming, Indian dance, and Chinese calligraphy. The event will conclude with a reception at 6:00 p.m. in the Union ballroom.

For more information, please visit the Diversity Day website at http://www.uiowa.edu/diversityday.

Have you loved your potato, lately?

Chad Graham

The symptom was located by the Iowa State Biomedical Research Institute. The symptom is caused by a reaction to the potato. Students and teachers, according to the Idaho Nutrition Department, have noticed an increase in the number of students who have reacted to the potato.

Superman still has super sex life

NEW YORK (AP) — Christopher Reeve, who starred as the Man of Steel in four films, said in an interview with the Associated Press that he is planning to move his family to the East Coast.

"I"m really looking forward to spending more time with my family," Reeve said. "I want to be able to spend more time with them, and not have to travel back and forth to the West Coast."

Just when you thought Iowa City water was safe...

Stacy Forrest

Environmental groups are reporting a recent spike in the public's fear of nitrate levels in drinking water, particularly after recent media reports of infant deaths. The Iowa City Public Utilities Department has issued a statement reassuring the public that the water supply is safe. However, some residents are still concerned.

"The purpose of the report is to let the public have the facts on the probability of Congress having intentions to make the water safer than there is," Ed Moreno, superintendent of Iowa City Water Division, said.

The report stated that nitrate contamination over the federal standard of 10 parts per million in drinking water is the result of modern agriculture practices. The new practices are a danger in the public water supply. According to the Clean Water Act and the United States Environmental Protection Agency, the nitrate levels are a potential problem that can cause infant deaths.

"We've identified nitrate contamination as a significant problem," Moreno said. "This allows them to add nitrate as a hazardous substance to the list." The EPA released a list of different contaminants that made hazardous substances on January 20th, including nitrate.

"Our system is designed to provide a clean water supply," Moreno said. "In 1990 and 1995 Iowa City had experiences when the nitrate levels went above the standard. Moreno said the drought of 1989 and 1990 brought high levels of nitrate in the water from the run off of exposed manure areas." Moreno said.

In the droughts of 1988 and 1989, the rain will wash the nitrate into the surface water, which is then contaminated with higher nitrate levels. "In the 1988 drought, we saw the nitrate levels peak," Moreno said. "And then, it started to rain, the levels became significant." Moreno said.

While the city has high levels, the water treatment plant measures to prevent future occurrences. The facility is a daily test of the nitrate level. Right now, the nitrate levels are between two to three, which is 10 parts per million, which is the EPA standard for 10 parts per million. This level is the International Health standard at 0.4 parts per million, which is considered safe.

In Iowa City, the Iowa Water Division is the primary source of public water for the city. The water, which contains high levels of nitrates from the run off of exposed manure areas, is given to infants under 6 months old. "The report stated that nitrate contamination increased at a time when the baby was at a risk of nitrate contamination," Moreno said. "This allows them to add it as hazardous substances to the list." Moreno said.

In Iowa, the Iowa Water Division is responsible for the water supply. "As of now, the new procedures are in place for the water supply," Moreno said. "The procedure is to test the water for nitrate contamination. This allows them to add it as hazardous substances to the list." Moreno said.

Moreno said if people don't take the water seriously and they raise the rain, the water will wash the nitrate into the surface water, which is then contaminated with higher nitrate levels.

Satellite on a string
A tiny satellite, attached to the space shuttle Columbia by a thin cord, is expected today to become the first mini-mote in the universe to be launched into space as the shuttle nano-carrier.

Potential uses of space tether:
- As a method of generating power
- To force satellites to and from a space station
- To improve observatories so that they can be confined or generated artificially

Deployment boom
Elbow-level strength is added so that the satellite will not hit the shuttle when released.

Shuttle crew begins testing text
Marius Dorsey
Associated Press
CAPE CANAVERAL, Fla. - Friday, January 19, 1996
Cape Canaveral's shuttle astronauts blazed out into orbit Thursday to attempt a space-age version of Benjamin Franklin's experiment - unveiling a satellite on the end of a 20-foot cord.

Franklin pioneered the idea in 1752, when he used a kite to demonstrate that lightning is electricity. The shuttle astronauts hope to show that electricity can be used as a means of communication and power.

"The shuttle orb (1), its craft above the Earth's magnetic field, electrically collects small particles from the sun's corona, and, with its antennas, sends them to Earth's atmosphere where ground stations can receive that data," said Dorsey. "It will be a wonderful day when we have those little bits of information in orbit."
**Campaign '96**

**New-negative ads widen GOP division**

John King

Associated Press

WASHINGTON - It was two weeks ago when New Hampshire's primary and Pat Buchanan was going to make news, shaking the Republican presidential field in a way his Iowa debate appearance had not.

The wisdom of the decision to revisit Bush as an unknown entity dealt that Buchanan says in his campaign managers' script: "He's my old friend doing this to me?" Buchanan asked a student: "It's hard to understand just how different that Bush has left us.

The wisdom of the decision to turn Bush as an unknown entity dealt that Buchanan says in his campaign managers' script: "He's my old friend doing this to me? Buchanan asked a student: "It's hard to understand just how different that Bush has left us.

In the final days of the New Hampshire campaign, Buchanan launched ads criticizing Dole and Bush in the race and for the Senate majority leader that he fired with his move to the right.

"I'm not going to sign off and Bush says outside jobs," Buchanan said.

As he campaigned through Arizona, he suggested that Bush and others who say Buchanan are taking the party at risk.

"I've always supported the Republican cause," Buchanan did. "I'd tell you, the same making is as.

**World Reactions**

Buchanan-Hitler comparisons fill European media

Hillery Apollon

Anadolu Agency

The victory of "America-first" Senator Bob Dole over Pat Buchanan in New Hampshire's Republican primary set off alarm in Europe, and the Edinburgh Scotsman said bluntly: "It is my old friend doing this to me."

In the final days of the New Hampshire campaign, Buchanan launched ads criticizing Bush and Dole in the race and for the Senate majority leader that he fired with his move to the right.

"I'm not going to sign off and Bush says outside jobs," Buchanan said.

As he campaigned through Arizona, he suggested that Bush and others who say Buchanan are taking the party at risk.

UNION WORKS FOR QUALITY

By Mike Evans

Working for quality education is an integral part of the mission of the Iowa City chapter of the American Federation of Teachers, Iowa Education Association. Our union represents approximately 2,000 teachers in the three school districts comprising the Iowa City Community School District. The Iowa City chapter is one of the first in the state to gain representation rights in a school district.

As part of our ongoing efforts, we are demanding improvements in the following areas:

1. **Class Size Reduction**: A reduction in class size from 20 to 15 students would allow our teachers to provide effective instruction and support the needs of all students.

2. **Safe and Supportive Learning Environment**: Ensuring the safety and well-being of our students is a top priority. We are advocating for additional security personnel and resources to create a safe learning environment.

3. **Professional Development**: We are pushing for increased opportunities for professional development and collaboration among teachers.

4. **Technology Access**: Access to the latest technology is crucial for modern education. We are demanding greater investment in technology infrastructure.

5. **Classroom Resources**: Adequate supplies and materials are necessary for effective learning. We are fighting for increased financial support for classroom resources.

We believe that these improvements will not only benefit our students but also our teachers, fostering a more engaging and effective learning environment for all.

"I see a pretty homogeneous state, unlike the counties where there is a few people left out and a lot of," Holstein said. "But there is a concentration among the states with the smallest minority populations. So many people haven't been exposed to the cultures of diversity."

The day also will be an opportun­ity to create awareness about certain cultures. Byrne-Hart said, "As the many small groups have discovered, there are no longer will be a cover charge to get into the bar. Yet people will still need to use the machine, so we will also install some air-conditioning."

In addition to removing the air-conditioning, the bar also will remove the wall that will separate the front bar from the wall. The bar will need to be lifted, the walls will need to be fixed and the windows will need to be cleaned. "It's going to be a lot of work, probably," Holstein said. "But we're going to do it because it's the right thing to do."

The bar will still be the busiest bar downtown. "We're going to keep doing the same thing," Holstein said. "But the students exploded in our face this week and our girls did," Holstein said. "At Easter, Bodensteiner said." "It's connected to some things, but in the future, people are going to be able to study it and learn from it."

"We really don't have that big of a problem with swearing anymore," she said. "The few times the kids do do it, I always tell them to do it when they're angry."
The two teams last met Jan. 18, at Carver-Hawkeyes Arena with Iowa coming out on top 85-78. But then Division was without its most potent weapon, point guard Kwiatko Gauss. When the two will have to approach the game completely different from a defensive standpoint. "It's a scoring threat," Iowa guard Moodie Jasper and "I don't think he's on the top of his game. I know he's played Iowa away, it seems like they get real fired up when you visit them in the gym," said Beason.

"If we can get on (Gauss) early in the game and hit him, I think we have a shot," Iowa guard Davis. "Their offense is pretty solid, which is why you need to get up at least two or three 3-pointers."

The Hawkeyes start slow at Big Ten meet

Mike Trigell

The Daily Iowan

It's up to us to start at the right level this weekend, Iowa head coach Jon Bashoff said at a press conference this week. The Hawkeyes hosted Travels to Madison, Wis. for the 1996 Big Ten Indoor Track Championships.

This two-day meet starts at 8 a.m. on Saturday with the women's 5000-meter run and the men's 3000-meter run. The final meet will be at 4 p.m. on Saturday with the men's 5000-meter run and the women's 3000-meter run. The Hawkeyes will look to make a strong showing in Madison. Bashoff said, "I'm not sure what kind of a meet it will be, but we'll see." The Hawkeyes finished seventh overall at last year's meet. Illinois, the defending Big Ten champion, is expected to repeat. Illinois and the host Badgers are both top ten teams in the nation. Although Bashoff is optimistic, he said he is looking for a strong showing in Madison. The Hawkeyes have finished in the top ten of the Big Ten in the past two years. Bashoff said, "It's going to be tough. We need to be prepared for anything." The Hawkeyes have their sights set on finishing in the top ten of the Big Ten.

The Iowa women's gymnastics team will look to improve their chances of winning the Big Ten title. The Hawkeyes finished eighth in the Big Ten meet last year. Bashoff said, "We want to improve our chances of winning the Big Ten title. We need to work on our floor exercise and our balance beam routines." The Hawkeyes have been successful in the past two seasons, finishing third in the Big Ten meet last year and fourth in the Big Ten meet the year before. Bashoff said, "We need to work on our floor exercise and our balance beam routines. We need to improve our chances of winning the Big Ten title." The Hawkeyes have their sights set on finishing in the top ten of the Big Ten.

- BETTER HURRY!

We have only five positions available for our next training class!
The Daily Iowan

Before there was Prozac, some psychologists used a 1,000-watt light bulb and colored plates to treat mental illness.

A flashy contraption called the Spectro-Chrome is part of two exhibitions in the UI Hospitals and Clinics Medical Museum. "Order and Disorder: Unter Dame Anna's Crab Traps 1870-1970" and "Order and Disorder: Unter Dame Anna's Crab Traps 1870-1970" feature preserved brains donated to the UI Department of Anatomy. The exhibit also features original anatomical drawings of the brain.

A man sits in front of his TV set. The focus of the meeting is a 5-foot bulletin board covered with a brain. The skull of a vengeful Army veteran turned into a masterful monsters and convincing spaceships - explored.

The UIHC Medical Museum exhibit of Order and Disorder features a psychopath who was used in the early 20th-century to study mental illness. The psychopath was used to measure bumps on the head based on the theories of Franz Joseph Gall, the founder of phrenology.

Theories of Franz Joseph Gall, the founder of phrenology, include preserved brains donated to the UI Department of Anatomy. The exhibit also features original anatomical drawings of the brain.

"We usually narrow a few quick decisions," said Dr. Stinson. "They are too interesting because they are so interesting."

"We want people to see the brain," said Dr. Stinson. "We want people who want to see the brain."
