The UI welcomes Oliver Stone

by Stecy Hurtzen

The Daily Iowan

There are numerous adjectives that have been used to describe film director and screenwriter Oliver Stone: filmmaker, political activist, author, and novelist. But one term that is consistently used is "controversial." And it's easy to see why.

Stone is known for his unconventional filmmaking style and his willingness to take on controversial subjects. His films have often sparked debate and divided audiences. However, Stone believes that the film industry is in a crisis, and he is determined to do something about it.

Stone's latest film, "JFK," is a historical drama that explores the conspiracy theories surrounding the assassination of President John F. Kennedy. The film has been praised for its strong performances and its exploration of complex characters, but it has also been criticized for its factual inaccuracies and its reliance on speculation.

In an interview with The Daily Iowan, Stone discussed his approach to filmmaking and his concerns about the current state of the film industry. He also talked about his upcoming project, "Stonewall," a film about the Stonewall Inn Uprising, a pivotal event in the LGBTQ+ rights movement.

Despite the challenges he faces, Stone remains committed to telling stories that challenge the status quo and that push the boundaries of what is possible in filmmaking. As he said, "I believe in the power of cinema to change the world, and I will continue to make films that reflect that belief."

...continued
**FACT OR FICTION: How much do you think you know about STDs?**

1. STDs can’t be spread from person to person. **False.** STDs are spread through bodily fluids (such as semen, vaginal fluid, and blood) and can be passed on through sexual contact (including oral, anal, and vaginal). Some STDs, like hepatitis B and syphilis, can also be spread through blood-to-blood contact during drug use.

2. If someone tells you they have an STD, they’re trying to cheat on you. **False.** People who have STDs may not know they’re infected or may fear judgment from others. They might also be asymptomatic and believe they’re healthy.

3. STDs can be treated and cured if caught early enough. **True.** Many STDs can be treated effectively with antibiotics or antivirals. However, some conditions, such as HIV, can’t be cured but can be managed.

4. HIV is a contagious disease. **True.** HIV is transmitted through bodily fluids, mainly during sexual contact and through sharing needles for drug use.

5. STDs are just a problem for young people. **False.** STDs can affect people of all ages and can occur at any stage of life. Women who are older than age 40 and men who are older than age 50 are at increased risk of certain STDs, such as genital warts and HPV.

6. Any time you have symptoms, you should get tested for an STD. **True.** If you have symptoms, such as abnormal vaginal discharge, genital sores, or pain with sex, it’s important to get tested to ensure you don’t have an STD. Early detection and treatment can prevent complications and spread of the infection.

7. Pregnant women can’t get STDs. **False.** STDs can occur in pregnancy and can increase the risk of complications, such as premature birth and congenital infections. Pregnant women should be tested for STDs during pregnancy.

8. STDs are spread by sterile instruments, like catheters. **False.** STDs can be spread through the use of shared sterile instruments, but this isn’t the most common mode of transmission. Sexual contact is the primary way STDs are spread.

9. STDs are only transmitted through sexual contact. **False.** Some STDs, like hepatitis B and HIV, can be transmitted through blood-to-blood contact during drug use, sharing needles, or having HBV-infected blood transfusions.

10. STDs can’t be prevented. **False.** There are effective ways to prevent STDs, such as using condoms during sexual activity, limiting the number of sexual partners, and getting vaccinated for certain STDs, like HPV.

**Common symptoms:**

- **HPV:** Warts appear as painless growths (like genital warts and herpes) that cannot be cured. Always have a medical provider check any warts you notice.

- **Chlamydia:** Men often have a burning sensation when they urinate and may have discharge from the penis. Women often have no symptoms but can still transmit the virus.

- **Gonorrhea:** Men often have burning or painful urination and may have discharge from the penis. Women may have no symptoms but can still transmit the virus.

- **Syphilis:** Men may have penile discharge and a chancre (a sore) at the site of infection. Women may have no symptoms but can still transmit the virus.

**Statistics:**

- 40% of new cases of gonorrhea in women are asymptomatic.
- 25% of men and women who have HPV don’t know they are infected.
- 90% of women who get HPV don’t get symptoms.

**In the U.S., six leading causes of death are related to infections caused by STDs.**

1. Cardiovascular diseases
2. Cancer
3. Chronic lower respiratory diseases
4. Stroke
5. Nervous system diseases
6. Diabetes mellitus

**Reported cases of STDs in the United States, 2019** (Source: Centers for Disease Control and Prevention)

- Syphilis: 13,374
- Gonorrhea: 335,947
- Chlamydia: 1,606,052
- Human papillomavirus (HPV): 6,348,651
- Hepatitis A: 85,045
- Hepatitis B: 14,126
- Hepatitis C: 40,000

**Get your facts straight on STDs!**

- Get tested regularly.
- Use condoms consistently and correctly.
- Practice safer sex.
- Get vaccinated for HPV.

UI robot dispatched to examine Chernobyl nuclear reactor.

By Nathan Emery

Eleven years ago, what has been called the "worst disaster in human history," the Chernobyl nuclear reactor exploded and the University of Iowa's Hospital for Special Surgery in Coralville sent out a team of experts.

After the Chernobyl incident, the area was engulfed in a thick cloud of radioactive dust that reached the United States, the University of Iowa's Hospital for Special Surgery in Coralville sent out a team of experts.

The team, led by Dr. John Dickson, a professor of industrial engineering at the University of Iowa, spent several days in the area, collecting samples of radioactive material and sending them back to the United States for analysis.

Dickson, along with his team, had been working on a project to develop a new method of measuring radioactive materials in the environment. The Chernobyl disaster provided an excellent opportunity to test their method.

"We had just finished a project in the area and were able to use the disaster as an experimental site," Dickson said.

The team's work in Chernobyl was part of a larger project to develop a method for measuring radioactive materials in the environment. The method was designed to be non-invasive and to provide accurate readings of the levels of radioactive materials in the area.

Dickson and his team worked for several days in the area, collecting samples of radioactive material and sending them back to the United States for analysis.

"We had just finished a project in the area and were able to use the disaster as an experimental site," Dickson said.

The team's work in Chernobyl was part of a larger project to develop a method for measuring radioactive materials in the environment. The method was designed to be non-invasive and to provide accurate readings of the levels of radioactive materials in the area.

In the '90s toll-free services sought to lift the veil on their image and attract more business. They were met with mixed reactions from the transportation industry and government regulators. The administration had proposed a grand plan to make toll-free services more efficient, but the proposal was met with resistance. The book "The Stolen Plane" by Philip Agee details the intrigue and politics surrounding the proposal, and the tension between the government and the transportation industry.

In 1996, the White House proposed a new tax on toll-free services to help defray the costs of running the government. The proposal was met with mixed reactions, with some in favor of the tax and others opposing it.

In the center, the issue of alcohol-related issues continues to be a top item on the agenda. The University of Iowa is sending letters to students about the issue. The council is working on a new plan to address alcohol-related issues on campus.

Continued is the focus on the importance of the new year of 5758. People are working with Tom Cruise on "A Few Good Men," which was shot in沙漠. The book "The Stolen Plane" is now available in paperback.

Read the rest of the story for more on the topic. More information is available at the MIT DEATH/Student death alcohol related section. For more on the issues, see the BICYCLISTS: section for more details.

Five hundred years of progress and what do we have to show?

I'm supposing in my 500 years since Columbus, crossed the ocean, the list of deaths from that thing alone is terrifying. If you don't want to make any comparison with hundreds of thousands of people who have died at sea, I would be willing to sit down at your desk and show you the number of people who have died at sea, if you can't imagine it. But I think we should consider that.

I think that if we consider that, we will realize that something is still very wrong with our society. We have a lot of progress, but what is the progress? What is the progress that we have made?

We have made a lot of progress in science and technology, but we have not made much progress in ethics and morality. We have not made much progress in terms of treating animals kindly.

If we look at the history of the last 500 years, we see that there have been many advances in science and technology, but also many setbacks in terms of ethical and moral progress.

For example, the industrial revolution brought about great advances in technology, but it also brought about the exploitation of workers and the pollution of the environment. The use of pesticides and herbicides has led to the destruction of ecosystems and the death of many animals.

We have made advances in medicine, but the cost of healthcare has increased dramatically. The suffering of animals in factory farms and the exploitation of workers in sweatshops are still widespread.

So, while we have made a lot of progress in science and technology, we have not made much progress in terms of treating animals kindly.

We still have a long way to go before we can say that we have made significant progress in terms of ethical and moral progress.

In order to make real progress, we need to focus on treating animals kindly and ensuring that we are doing our best to protect the environment.

I hope that we can make real progress in the next 500 years and that we can learn from the mistakes of the past.

Brian Sutherland
I'm trying to understand the situation I'm finding myself in, and I'm really stuck. It's a complex problem with many variables. I know it's important to tackle it head-on, but I'm not sure how to proceed. I feel like I'm spinning in circles. Can you help me think through this?
"Seltzer" (1974)  
This Canadian director made this first feature, a waltz-riff balls of a novel about the trials and triumphs of a family of women in the 1920s. "I've always put everything on the line," Deiker said. "If you don't have that, you can't do whatever you want." Deiker said.

"Midnight Express" (1978)  
Stone was one of those stars that the film did not have a contract with a network, a network-produced film. "I'm not put in the line," Deiker said.

**Fry cautious about toying with Iowa emotions**

Hayden Fry is concerned about his players getting too jacked up about this weekend's showdown with No. 7 Ohio State.

By James Krarner

The Daily Iowan

Hayden Fry has seen the Iowa football team win or lose, as he'll be the 30th Hawkeye coach to lead the team to No. 1. Ohio State this weekend. Fry said he could quit coaching with pride, but not because of winning, because 38 years ago his son was killed in a car accident.

"I don't think we've ever been more controlled,' Fry said. "I think we've been more patient, and we've been more emotional, because I don't think we've ever been more satisfied."

"We've got to be realistic about this, and I think we've got to be realistic in the way we approach this game," Fry said. "I think we've got to be realistic about winning and losing, and we've got to be realistic about the way we approach this game."

"I think we've got to be realistic about the way we approach this game," Fry said. "I think we've got to be realistic about the way we approach this game."

Detroit's Stanley Cup defense begins today at Calgary

By Ken Rappoport

After winning their first Stanley Cup in 42 years, the Detroit Red Wings now face the hard part.

"Our team is going to be tested," said captain Brian Leetch, whose Red Wings play at Calgary today in one of two season-openers on the NHL's 90-game schedule.

"We need to be tested and we need to get through them prepared." The Detroit Red Wings are coming off a draining tank. There hasn't been a really crucial battle for the Stanley Cup since Pittsburgh in 1980 and 1981 and there have been only a few tense situations in the first 15 games, but Detroit and Calgary are getting ready to get their legs under them. The Red Wings are definitely in a meeting of the minds training. The Blues had the second-best record in the NHL last season while winning the Presidents' Trophy. And the Wings have the Presidents' Trophy and the Greater than Detroit. "I'm not afraid to do what is right and not be a Ranger," Mike Modano, who is fully recovered and ready to win the Cup - at the age of 31.

"I told them to have a passion," Brian Leetch said. "I wanted them to win the Cup, it doesn't go away. But in the right way. Free agency, a few changes may help the team. But the right way, the board's passed on the ice training. The Blues had the second-best record in the NHL last season while winning the Presidents' Trophy. And the Wings have the Presidents' Trophy and the Greater than Detroit. "I'm not afraid to do what is right and not be a Ranger," Mike Modano, who is fully recovered and ready to win the Cup - at the age of 31.

Gators lose Jackson for rest of year with knee injury

Iowa City, Iowa

By Doug Ferguson

Gainesville Fla. - No. 11 Florida is about to find out how many players it takes to replace Tim Jackson, the most versatile playe-
r in the Southeastern Conference and a defensive linemen is the right knee against Miami.

"Only time will tell if his absence is going to be felt," said new defensive coordinator Randy Stoll said Tuesday.

The Gators are already at triple-digit number of players.

Iowa City, Iowa

8 Edgar Renteria's two-out, two-run homer in the top of the ninth inning lifted the Marlins to a 2-1 win over the San Diego Padres in Miami. The victory gave Florida its second straight trip to the National League Championship Series, where the Marlins will face the Arizona Diamondbacks in the division series.

Paul Newbery  The Miami Herald

Atlanta natives Houston in pitcher's duel

By Scott Adam

LEADING OFF:

- Can Braves manager Bobby Cox win his 10th division title with Atlanta? It's a question he's asking himself these days, but he's not getting any answers.

- Will the Braves clinch the NL East this week? It's a possibility, but it's not a certainty. And even if they do, it won't mean much if they don't win the World Series.

- Can the Braves clinch the NL East this week? It's a question that has been asked many times this year. And even if they do, it won't mean much if they don't win the World Series.

- Will the Braves clinch the NL East this week? It's a question that has been asked many times this year. And even if they do, it won't mean much if they don't win the World Series.

Boxing

McCall cleared to fight

Heavyweight fighter Oliver McCall, center, reacts as his trainers George Benton, left, and Greg Page try to console him after he lost to Lennox Lewis in the WBC heavyweight championship fight on Feb. 7. McCall, who had moved up to junior heavyweight from the heavyweight division, was stopped in the 10th round.

The Daily Iowan

Boxer dies from injuries suffered in the ring

Johnny Montanet became the third boxer to die in Nevada in three years.

By Tim Dalberg

L.A. VEGAS — Johnny Montanet came to this boxing capital still carrying the spirit he had when his life became a continual struggle to overcome the odds. He was a small man who had to fight as a lightweight since he was too small to be matched as a junior welterweight.

He died Sunday of head injuries suffered in the ring.

Montanet was 23.

He was most of his life as a lightweight, turned up to junior welterweight to fight six more opponents before dropping down to lightweight. He died Friday after being stopped in the 10th round of a fight against Ivan Laguarda in Las Vegas.

My best year out of it, said Montanet, who was semiprofessional at the Las Vegas National Finals, "I was thinking about fighting for the money."

The fight against Clay was one of the most memorable of his career.

The last time he had lost a fight, Montanet said his manager told him to go try to lift his head if he didn't win. He said he got the heaviest lift he could.

"I don't think I'm going to be around for much longer," said Montanet, who was born in Los Angeles.

He was the son of a former boxer, Johnny Montanet Sr.

Montanet's family owned a restaurant in Los Angeles, and Montanet was working there when he decided to start boxing.

The family was known as one of the best in the business.

"We were all the best," said Montanet Sr., who was a top fighter in the 1960s.

He said his son had a strong personality and was a hard worker.

Montanet's brother, Johnnie, was also a boxer.

"He was a fighter," said Montanet Sr., who was a three-time world champion.

He said his son had a strong personality and was a hard worker.

Montanet's father, Johnnie, was also a boxer.

"He was a fighter," said Montanet Sr., who was a three-time world champion.
