GOALS OF THE PLAN:

RECRUITMENT
Attract high school students less likely to be high-risk drinkers in college.

EDUCATION
Support students with alcohol education and alternatives.

ENFORCEMENT
Protect students, the UI, and the community by helping high-risk drinkers.

ACCOUNTABILITY
Hold high-risk drinkers accountable — possibly remove students from the UI.

A grant provides $15.7 million in funds for construction.

For years, the University of Iowa has struggled with ongoing drinking issues and a party-school reputation. Today, the university is unveiling a strategic plan in hopes of fixing the problems once and for all.

By NINA EARNEST

A grant provides $15.7 million in funds for construction.

In just three years, 15 percent fewer University of Iowa students will be binge drinkers. At least, that’s one goal of university officials under a new, aggressive plan to reduce harmful student drinking and rid the UI of its party school image.

The Alcohol Harm Reduction Plan — expected to be presented today at a UI Faculty Senate meeting and obtained in advance by The Daily Iowan — is the result of nearly a year’s worth of meetings by a 26-person committee. It is the final draft of a document that has gone through numerous revisions.

President Bruce Harreld, in his address to students last fall, said that he expected the university to make a change.

“I think the question … is whether to accept a grant or not,” he said.

For the final draft, however, the committee, appointed by UI Vice President for Student Services Tom Rocklin, removed certain ideas, clarified others, and laid out a set of four goals to begin tackling the university’s alcohol problem over the next three years.

Previous versions, obtained by the UI Faculty Senate will discuss today.

An international flavor
Karen Wachsmuth's outreach programs provide opportunities for UI students as well as for the Iowa City community.

BY SAMANTHA GENTRY

A conductor who previously had taught the con-
mort through music now reaches Iowa City through her passions and her music. Wachsmuth has only arrived at the University of Iowa about a year ago, but she is making a big differ-
ence. She has worked with all different groups and has started the International Programs.

Wachsmuth has been working with Study abroad and the International Student and Scholars Office and has started several programs. She is working with the community through promoting the culture.

Wachsmuth also helps with the Office of Academic Analytics and Programs and the International Community. Wachsmuth is a living legend in the Iowa City community. Mayfield cites students who are interested in international studies. Wachsmuth is a student at the University of Iowa and is involved in the community.

Wachsmuth started working with the International Community last year. She is working with students to help them have more opportuni-
"It's really about being a resource to the students," Wachsmuth said. "It's really about being a resource to the students."

Karen Wachsmuth

Karen Wachsmuth works with the University of Iowa and the Iowa City community and is a “connector” between the two. She is a music lover and is interested in other countries and languages.

"It's really been about languages, teaching or what country they are from. International students parti-
ticipate in the various events," Wachsmuth said.

"Sometimes, schools ask me some questions for different occasions depending on what country they are teaching or what country they are from," Wachsmuth said.

Wachsmuth said that the Iowa City School Board members visited the school.

"The school was one of nine socioeconomically isolated as having an ethnically and socioeconomically isolated as having an ethnically and

More education, awareness needed on cyberbullying

Before the advent of the Internet, when social networks such as Facebook and MySpace were still a thing of the future and cell phones were big, bulging devices for the privileged few kids could escape the bad, bully-hunting by running back to the comfort of their homes.

But with digital devices now readily available, virtually no person is safe, and almost anyone can be a target via the cyber world — the increasing awareness of cyberbullying — and the profound isolation that can ensue for its victims, is not just a phenomenon that has emerged over the last decade. The presence of this threat has been so severe that efforts to conquer cyberbullying and protect against its effects must be sophisticated.

In the past, if you were a victim of bullying, the only means of redress that existed were the power of the legal system and the threat of a lawsuit. However, today, cyberbullying can put people in contact with a bullies in a way that was never before possible. The spread of the Internet and mobile devices allows people to be bullied by people they have never met.

In addition, social media platforms allow bullies to systematically target their victims and to fabricate false information about them. This can lead to a cycle of harassment and manipulation that can have devastating effects on the victims' mental health.

Moreover, cyberbullying can be more invisible than traditional forms of bullying, as it can occur anywhere and at any time. It can also be more difficult to detect and address, as it may be difficult to gather evidence of the bullying behavior.

However, there are ways to combat cyberbullying. The first step is to educate people about the problem and the risks it poses. This can be done through classes, workshops, and seminars. It is also important to create policies that protect people from cyberbullying and to hold perpetrators accountable when they engage in such behavior.

In conclusion, cyberbullying is a serious issue that must be addressed. We must work together to create a safer, more inclusive online environment for everyone.

Opinions

The benefits of WikiLeaks

WikiLeaks has revealed a number of significant stories in recent years, most notably the United States and the United Kingdom. WikiLeaks has exposed a large number of documents that have revealed the way our governments work. These documents have been published on the internet for everyone to see.

WikiLeaks has been the subject of a lot of criticism. Some people say that it is dangerous to release such information. They argue that it is a threat to national security and that it can lead to diplomatic problems. However, I think that the benefits of WikiLeaks far outweigh the risks.

WikiLeaks has exposed the way our governments work. It has shown us that they are not always acting in the best interests of the people. It has also shown us that they are not always acting in the best interests of the country.

WikiLeaks has also shown us that our governments are not always truthful. It has revealed that they have kept secrets from the public that were important. It has also revealed that they have lied to the public.

In conclusion, I think that the benefits of WikiLeaks far outweigh the risks. It is important for us to know what our governments are doing, and WikiLeaks has helped us to learn that.

More education, awareness needed on cyberbullying

No sympathy for shattered bars

Not many months ago, an A 1741 Guarneri violin — in fact, one of the very few left in the world — was auctioned at Christie’s for...
LEVEE

CONTINUED FROM 1

The city would pay the difference, said Rick Rose, the director of Iowa City’s Public Works.

The city can decide to organize all three, or a mix of the three levee projects, Davidson said. Candidates also have to decide whether to build the 100-year or 500-year flood- proof levee.

Construction of a levee or roadway — along the Iowa River — would require a road to run along the top of the levee and solve the “very careful engineering,” Davidson said.

But estimates for a levee on the Taft Speedway prepared for a 500-year flood plus 3 feet is $11.7 million.

Councilman Susan Mims asked Davidson if the city is committed to building the levee if the council accepts the grant money.

There is a chance the city could keep the funds if it doesn’t do the levee, she said, as the preliminary design, but it’s not a certainty. The city would likely have to return the remaining money if the levee is not built.

“I’ll run into something that really changes what your application said and you wanted to do (or) there is a chance that we would be able to keep the funds we had expended up until that point,” Davidson said.

More asked if there were other options instead of an earthen levee, but Davidson said the grant had to be approved for any future levee construction.

“We go down this road,” said Rick Rose, the director of Iowa City’s Public Works.

The decision to build a levee or roadway — along the Iowa River — would require a road to run along the top of the levee and solve the “very careful engineering,” Davidson said.

Heslam Trophy finalists named

By JOHN MARSHALL

Auburn quarterback Cam Newton and Oregon running back LaMichael James have both earned their share of national attention this season. Newton, a junior, has led the Tigers to the SEC West title and the No. 2 ranking in the BCS standings. James, a senior, has reportedly shown improved play in the past four games, and the Ducks are fourth in the BCS.

Newton and James were among the finalists for the Heslam Trophy, which is named after the late C. Kenneth Heslam, former president of The University of Tennessee. The trophy honors the best college football player in the nation who displays the qualities of strength of character, leadership and academic excellence.

Newton and James were joined by a third finalist, Oregon quarterback Darron Thomas. The other finalists were Alabama wide receiver Julio Jones, Nebraska running back Ameer Abdullah and LSU defensive end Claire Weatherspoon.

The Heslam Trophy will be presented to one of the four finalists during a ceremony at the BCS Championship Game on Jan. 9 in Mercedes-Benz Superdome in New Orleans.

Newton, James and Thomas will be honored at the award ceremony, and each will receive a crystal bowl. The winner will receive a crystal trophy.

Newton is a three-time All-American and a Heisman finalist. He is one of three finalists for the Maxwell Award, which is given to the nation’s top player.

James is a three-time All-American and the only finalist for the Walter Camp Award, which is given to the nation’s top offensive player.

Thomas is a three-time All-American and a Heisman finalist. He is one of three finalists for the Johnny Unitas Golden Arm Award, which is given to the nation’s top senior player.

The Heslam Trophy is the highest honor a player can receive in college football.

Will Iowa beat Missouri in the Insight Bowl?

No

The Hawkeyes are heading to Arizona to play in a bowl game. They still need to decide which national championship game they want to be in before the season started.

Indeed Iowa is heading to the Insight Bowl after it ended the season on a three-game winning streak and finished with a mediocre 7-5 record. The Hawkeyes' opponent is the Missouri Tigers, who finished the regular season at 10-2. The Tigers' 10-2 record consists of one Big 12 Conference title and a non-conference win over the Ohio State Buckeyes.

Missouri has started on both sides of the ball with solid offense averaging 35 points per game while a stingy defense gives up an average of 18.4 a game.

The Tigers only loses both came on the road (Texas, Texas Tech), and both games were close. Consequently, the majority of starters are expected back, which potentially be a national champio

n team from four seasons ago. Missouri has to be facing fac

ing the tough Hawkeyes in the Insight Bowl, considering it's one of the best defensive lines the team has faced so far. The 15 Hawkeye veterans that have started in each of the last 33 games of the season could have a real impact in the contest. Their experience and leadership will be critical to the outcome of the game.

Offensively, Missouri will have to deal with the Hawkeyes' stingy defense. The Tigers are averaging 15.6 points per game, which will be a challenge for the Missouri offense that is ranked 29th in the nation in points scored.

The 15 Hawkeye veterans that have started in each of the last 33 games of the season could have a real impact in the contest. Their experience and leadership will be critical to the outcome of the game.

The Insight Bowl will be held on December 29th in Tempe, Arizona. The game will kick off at 7:30 pm CST and will be shown on ESPN.

The Hawkeyes are currently ranked #14 in the AP Poll and the Coaches Poll. Missouri is ranked #19 in the AP Poll and #20 in the Coaches Poll.

The game will feature two of the best defensive lines in the nation. The Hawkeyes' defense is ranked 16th in the nation in total defense, while Missouri's defense is ranked 10th.

The offense for both teams will also be a key to the game. Iowa has a balanced offense with a solid running game and a strong passing attack. Missouri's offense is led by quarterback James Franklin, who has completed 69.5% of his passes for 2,795 yards and 19 touchdowns.

The Insight Bowl will be a key game for both teams as they look to secure a spot in the Sugar Bowl or the Fiesta Bowl.

The Hawkeyes (4-4) don't look to when they touch the floor.

“I don’t think anyone really asks to be on a relay — you just have to prove yourself,” junior Duncan Partridge said. “It’s still another game” was one typical answer from freshman Jonathan Dejongh when asked about any rivalry.

“It’s still another game” was one typical answer from freshman Jonathan Dejongh when asked about any rivalry.

“Typically during dual- meet competition, there will be only two relay winners — the 200 medley and the 400 free. In the medley relay, each participant swims a different stroke, starting with back, then breast, fly, and finally free. The Iowa coaches tend to choose their fastest swimmers for each stroke during the medley relay, junior Paul Gordon said. “The difference between a medley relay and free relay is that we have guys like Sean Hagye, who could do breaststroke or backstroke,” Gordon said. “We’ve got guys who are versatile, whereas in a few relay the order only depends on how you think your opponent will be swimming.”

Because the Hawks face teams that aren’t events instead of individual races, the races often move quickly in the water as they compete.
