University pushes fast-track degrees

The University of Iowa will implement two new accelerated graduate degree programs in the coming months.

By LAURA HERNDON
lherndon@uiowa.edu

A pair of accelerated degree programs will soon become an option for high performing students. The College of Public Health is seeking interested students for its program, and it offers an undergraduate course to group student interest in the field. The College of Law hopes to admit its first group of students for the 2015 fall semester.

Both programs will allow high performing students to earn credit toward a graduate or professional degree, while earning undergraduate credit during their senior year. The law program will be a 3+3 program, which will allow students to finish both an undergraduate and professional degrees in six years. Students in the Master of Public Health degree, which is a 3+2 program, will earn their degrees in five years.

Dean of the Graduate College John Keller said the transition to the graduate program occurs during and after the third year of undergraduate coursework.

Keller said students will take between nine and 12 semester hours of graduate course work during their senior year, which will count as both electives and graduate-level course work. "These are not programs for everyone," Keller said. "Those are for high-performing, highly motivated students," Keller said.

The law program, a professional assistant professor of internal medicine and pediatrics and a researcher on the team, "There's a reliance beyond just high school concession stands."

Concession Stand Makeovers began in 2008 as a project designed to revamp concession stands during high-school athletic events by adding healthier options. Some of these options included baby carrots, chicken and various steps groups can take to implement the program. U of I Vice President for Student Life Tom Bocklin said although there are no plans to use the guide to alter concession stands, the study will most likely motivate students, "These are not programs for everyone; they are for high-performing, highly motivated students," Keller said.

"We have found that healthier eating maintains sales and increases satisfaction."

A University of Iowa study shows healthier eating maintains sales and increases satisfaction.

By IAN MURPHY
ian-murphy@uiowa.edu

Healthy eating has a better chance of beating out junk foods when it comes to filling stomachs and cash boxes, according to a study recently released by researchers at the University of Iowa.

After learning that offering healthier foods can increase satisfaction while maintaining steady incomes, researchers are hoping to influence the UI with their newfound knowledge.

"It would love to see it used in Iowa City," said Helena Laroche, a UI associate professor of internal medicine and pediatrics and a researcher on the team, "There's a reliance beyond just high school concession stands."

Concession Stand Makeovers began in 2008 as a project designed to revamp concession stands during high-school athletic events by adding healthier options. Some of these options included baby carrots, chicken, and pickles.

After collecting data from a pilot program at Maschke High School, researchers wanted to learn if alternatives to traditional concession-stand food are positive.

Laroche said the benefits reach beyond high school athletic events and could be used as a teaching tool. Aiming to expand the reach of this study, Laroche said the team is working on new and improved ways to distribute the information. Part of the plan is to use a guide created by the team that details the benefits and various steps groups can take to implement the program.

University of Iowa researchers look for more wind-energy options.

By MICHELLE NGO
mngo@uiowa.edu

Members of the community and University of Iowa faculty learned the history of wind energy innovation and the future of the renewable energy source during a one-hour lunch break.

The UI Office of the Provost presented its first Lunch and Learn event in Iowa City on Monday. UI Executive Vice President and Provost P. Barry Butler spoke on the expansion and significance of wind energy in his presentation "Wind Energy: Past, Present, and Future."

States located in the middle of the United States have some of the highest wind-energy capacity, which is why Iowa has an increased interest in the renewable energy source.

As of 2012, 24.5 percent of Iowa's energy came from wind, much higher than the national average of 2.9 percent. Butler said, "That's why you'll see a lot in western Iowa. Butler said, "We’re sort of on the edge of that wind band where the average winds are much higher."

The taste of chlorine in University of Iowa water is neither uncommon nor unsafe.

By DANIEL SEDL
daniel-seidl@uiowa.edu

"It's more pronounced this year because the snow has been sitting there rotting all winter," UI Water Plant manager Scott Slee said. "You're drinking chlorinated water all year."

If alternatives to traditional concession-stand food are positive, the plan is to use a guide created by the team that details the benefits and various steps groups can take to implement the program.

"The chlorine reacts with these organic particles, giving off a gas, which leads to the noticeable odor and flavor. Butler said.

UI Water Plant manager Scott Slee said although there are no plans to use the guide to alter concession stands, the study will most likely motivate students, "These are not programs for everyone, these are for high-performing, highly motivated students," Keller said.

The University of Iowa water treatment facility and local source for student drinking water is the Iowa City, Iowa, UI Water Plant.

The study will most likely motivate students, "These are not programs for everyone, these are for high-performing, highly motivated students," Keller said.

The law program, a professional degree, which is a 3+2 program, will allow students to finish both their undergraduate and professional degrees in six years. (The Daily Iowan/File Photo)

To make systems more efficient, each industrial process needs to be efficient, and economics of the production and distribution of electricity. As a result, the majority of wind turbines are in rural areas, and people in urban areas are hesitant to see them because of aesthetic reasons. Unlike power-generating systems that use such sources as coal or natural gas, wind cannot be controlled or manipulated. The more reliable it is, the cheaper the wind energy will become," said Kyung K. Choi, a professor of mechanical and industrial engineering. "The wind energy can be produced in one location but may not have enough capacity, so then you have to load them up... The wind energy is a product of a more populated area. The wind is important to research writer for the Iowa Alliance for Wind Energy and ways to operate better.

The law school hopes to admit its first group of students to the program, law Dean Guyl Aguiar told the state Board of Regents Education and Student Affairs Committee. The law school is partnering with several other universities in the state to research different industries, which will be a way to make systems more affordable and available.

The Plant Responsibilities Committee also approved a $2 million dollar purchase for UI Communications for UI College of Engineering, including taking the GRE. "From 2005 up until last year, we actually exceeded the initial growth curve, but that was still in the lower part of growing the curve," Keller said. "It's in the next 10 years when it really takes off. We're ahead of the growth curve, and then we can stay there, and that's the challenge."}

A hear and a half, give or take

Public-health experts have sounded the alarm about childhood obesity. In 1962, 13 percent of American adults were considered obese; by 2010, that number had risen to 35.7 percent. There are many reasons for this alarming statistic: One is that what was 50 years ago a “shockingly empty calorie” was, for three minutes feels like a nanosecond. Another is that half a nanosecond, called the Boeing 666) is based on the number-...
Sometimes, Sam can be physical; she’s strong. It’s likely experienced. She’s incredible in the national championship performance.

She’s been around," Louisville head coach Jeff Walz said. "She brings a lot of energy. Terms of energy. Things she saw came in terms of energy. "She brings a lot of energy to her team," Logic said. "She’s got energy out of her team, from what I’ve seen. It’s just a lot of energy. You can tell that just watching her in any game.”

Louisville head coach Jeff Walz was quick to praise Logic, a first-team All Big Ten selection, in his press conference Monday. "Samantha Logic is just a very heady basketball player, understands the game, and does a limitless job of getting her team organized," Walz said. "Very impressed with her ability to take a shot, likes how she’s constantly coaching. She’s out there getting everyone involved. I was really impressed with her."

"A common message around the Hawkeyes’ locker room is that they want to continue and to defend the parquet floor of Carver-Hawkeye Arena. Logic said that advancing to the Sweet 16 isn’t another post-season tournament ambition — it’s win or see the season tournament await your team, from what I’ve seen. It’s just a lot of energy. We just have to keep it going. They worked hard to get this point, and score all-important college points. Returning

</table>
The most recent basketball season may have been underwhelming, but it wasn’t a failure. Some thought that Iowa’s run to the NCAA Tournament was new territory for an Iowa basketball team in Iowa's favor, however – the chips didn’t fall right in the key to success for taking down the Hawkeyes. That wasn’t the case. It wasn’t like one of our games and downs. You win close games. That’s what happens last year, even if it was short like this. This was new territory for us. We were thrilled with that and the competition.

Iowa didn’t take the giant step in 2013-14, setting the table for big-experience season. These guys know what it takes to compete at this level. These guys are taking a big-experience season, and that’s half the battle. Really – passing the baton. This was a learning-experience season, setting the table for bigger things in 2013-14, but that wasn’t the case. Iowa’s run to the NIT championship game a year ago was the learning-experience season, the plateau before a peak is reached. Some thought that Iowa’s leading scorer in Devyn Marble, and Zach McCabe, may not have been on a play-in game in the NCAA Tournament. Iowa and Tennessee have underperformed. And Tennessee had a lot to do just about any team in March madness however, the right time, and for lack of better form.

The Hawkeyes back to relevancy on the national level, but that wasn’t the case. Iowa’s run to the NCAA Tournament was new territory for us. We were thrilled with that and the competition. We have really pissed me off. This was a learning-experience season, setting the table for bigger things in 2013-14, but that wasn’t the case. Iowa’s run to the NIT championship game a year ago was the learning-experience season, the plateau before a peak is reached. Some thought that Iowa’s leading scorer in Devyn Marble, and Zach McCabe, may not have been on a play-in game in the NCAA Tournament. Iowa and Tennessee have underperformed. And Tennessee had a lot to do just about any team in March madness however, the right time, and for lack of better form.

Iowa forward Okey Ukah sits in the locker room after the game against Tennessee. The Hawkeyes lost to the Volunteers, 78-65. Iowa forward Zach McCabe walks to the bench during the game against Tennessee. The Hawkeyes lost to the Volunteers, 78-65.

**New Hawkeyes ready to fit right in**

*By Ryan Probasco*

Failing the 66-62 loss to Illinois on March 6, junior-college產品 guard Trey Dickerson confirmed Iowa that he was going to join Fran McCaffery’s program for the 2014-15 season. Dickerson spent the past year averaging 19.8 points and 3.7 assists for NWOSU in North Dakota. The 6-7 guard spoke with The Daily Iowan about his decision to enroll at Iowa and what he intends to bring to the team. Dickerson’s success at junior college over the past season has never taken it before: an appearance in the Sweet 16 of the NCAA Tournament. It’s a very difficult thing to get to the final 16 Taylor said about moving on to Louisville’s home court for the Sweet 16. “It’s a very difficult thing to get to the final 16,” Dickerson said. “It’s something that has eluded me personally.”

Dickerson is a run-and-roll type of player who can score but also can help set up his teammates. “It’s something that has eluded me personally.”

**Wrestling’s labor’s lost in tourney**

Had Nick Moore and Ethan Lofthouse duplicated their Big Ten championship performance, Iowa would have been competitive at the NCAA championships.

*By Matt Cabel*

The Iowa women’s basketball team wants to hold on where head coach Lisa Bluder never takes it before: an appearance in the Sweet 16. Nick’s Louisville stands in the way, making the game a 21-point (on a night in the second round of the NCAA Tournament in Carver-Hawkeye on Sunday). Iowa defeated Marist, 87-65; it will play Louisville at 8 p.m. today. (The Daily Iowan/Margaret Kispert)
