The construction of the Johnson County Secondary Roads Facility may include the installation of rooftop solar panels. The Johnson County Board of Supervisors discussed the project at their meeting Thursday with hopes to work on it and better sustainablity in Johnson County.

In March 2013, a fire destroyed the peninsula — a county building that houses county tracks, snow plows, and road pavers, among other things.

Now, the county is in the process of building a new, $1.6 million facility and looking for ways to make it more energy efficient.

“If this solar project was accepted, I think that this would just be a feather…”

A longtime resident of Iowa City received the highest recognition in her profession Thursday.

St Mary’s has donated to the institute to support its general research.

I believe that in this day and age, people need to keep in mind the moral dimensions of their church according life,” said Spiegel.

Although the institute follows the same values because of religious reasons, it contends that it has seen research that shows there may be disadvantages to using embryonic stem cells.

Of the $400,000 the institute has raised, Kamath said “class of half a bit more than half is earmarked for ALS research.”

Though most of the funds go toward ALS research, Kamath said, the institute works in four core areas: cancer, neurological diseases, diabetes and adult stem cell therapy.

Kamath said the institute also police itself in delineating a larger permitted budget to research issues opposed to administrative expenses.

From 55 to 60 percent of the money we get to research,” Kamath said.

According to the online annual report of the ALS Association, 28 percent of funds have gone to research, while the remaining 72 percent have been divided among administration, fundraising, public and professional education, and patient and community services.

Kamath says, “I think it would be very hard to pinpoint where (the funds) should specifically go, because there’s multiple research (studies) going on,” she said.

Kamath said he encourages people who choose to donate to ask themselves if the research they are supporting is something they are OK with, morally or ethically.

“It’s important to know where your money is going and what is being utilized,” he said.

BY ALYSSA GUZMAN

A medical research institute in Coralville, which aims to conduct clinical research for ALS without using embryonic stem cells, has raised more than $400,000 for research.

A longtime resident of Iowa City received the highest recognition in her profession Thursday.

ST SYRUPS has donated to the institute to support its general research.

I believe that in this day and age, people need to keep in mind the moral dimensions of their church according life,” said Spiegel.

The cohousing project asks for more land and reveals its building plans.

By RACHEL GREEN

The land that was purchased for the site of Prairie Hill is walking distance of the University of Iowa residence halls and campus. Construction on the community is expected to be finished and the house completed by the spring of 2015.

Many residents of the surrounding neighborhood who had concerns about the dangers of having the required 16 feet of street en face onto Benton Parkway were concerned that having a seven feet wide street would incite more accidents. Mary Keudson, who lives off the street, brought up a study stating the average accident rate on the street is two-and-a-half times more than the state average.

"Others propose that this was desired or discouraged because of the (street) that's 10 to 12 degrees on Benton," she said. "It's even more prevalent now, because of a new study that shows the high traffic on the street."

Many residents of the area also expressed concern over the additions to Benton Hill Park that Iowa City Cohousing hopes to have approved. It will include private homes for residents and a large common house, complete with a large dining room, kitchen, workshop, several apartments, and a workout space.

Several Iowa City residents who live near the Prairie Hills community are against the project. "I know my neighbor is not happy about the project," she said. "I don't want the (street) to happen," she said. "We managed to get everything we wanted."

Despite some negative feedback about the project, many of those who spoke up were happy that the park is still in an "active form," and that the community has given it all the attention it deserves.

Gayle Blevins, a former Iowa City, said a person "kept eyeing us" when the project was initiated. "She doesn't put any stock in that," Blevins said. "We have a plan in this project to lower our impact on the environment."

Del Holland, a member of the Iowa City Planning and Zoning Commission, said the board asked the Iowa City Cohousing Board of Managers for more land. "We're casting aside the veil of a new study that shows the high traffic on the street," she said.

"We're letting the people have a voice here," Blevins said. "I don't think we're an unstoppable force to be reckoned with."

"I knew her as a wonderful leader, and have gotten to high places of power realize we need that," said Lloyd-Jones. "A lot of women have been through the mill and have gotten to high places of power realize we haven't gotten there yet," Lloyd-Jones said.

"Women like Grant who have been through the mill and have gotten to high places of power realize we haven't gotten there yet," Lloyd-Jones said.
Opinions

I am shocked by how people (borders) are being perverted spread through the Hamas was able to expand and the consequence of the US' relation with Israel. booed Cruz off the stage, the group, whose mission is to raise awareness about persecuted Christians and Copts in the Middle East, gave Cruz off the stage as the addressed the “US’s relation with Israel.”

In the video that accompanied the Huffington Post piece, there is a conversation with a member of the audience, to which Cruz responds, “If you will not stand with Israel and the Jews, then I will not stand with you. Thank you and God bless.”

Amid cheers and boos, Cruz walks off the stage, as if the only thing he was missing was a microphone.

As a Jew and an American who staunchly supports Israel, I have been well aware that there have been attacks on American soil, even before the World Trade Center and Pentagon attacks. I am particularly appalled by the attacks on American soil, even before the World Trade Center and Pentagon attacks.

Unfortunately, back then, I was unaware of the media's blind eye. Media, Jews (around the world and those in the diaspora) are being persecute by Hamas, who is on the ground and without hesitation support attacks on Jewish institutions and the Jewish community.

LETTERS TO THE EDITOR

Editorial wrong on e-cigarettes

The Editorial Board Sept. 13, opposing the proposed restrictions on e-cigarettes in public indoor areas is (mis)informed. I am advocating for the public health and safety of all citizens. I am not advocating for “any” indoor areas, but I am advocating for indoor areas in which people are at risk of exposure to the hazards of e-cigarettes. I am advocating for indoor areas in which people are at risk of exposure to the hazards of e-cigarettes.

The Editorial Board states, “The public health and safety of all citizens are at risk of exposure to the hazards of e-cigarettes.” The public health and safety of all citizens are at risk of exposure to the hazards of e-cigarettes. The public health and safety of all citizens are at risk of exposure to the hazards of e-cigarettes.

READER COMMENTS

That may sound obvious but in reality it is not. E-cigarettes, also known as electronic cigarettes, are handheld devices that simulate the act of smoking. They are not as harmful as regular tobacco cigarettes.

SPORTS 7

Women's tennis heads to Minneapolis and unique doubles

By IAN MURPHY

Changes to the Gopher Invitational will mean changes all weekend for the Iowa women's tennis team.

Rather than a traditional singles tournament spanning three days, each day of the Gopher Invitational will feature a unique doubles draw played out before singles play begins for the day. Head coach Katie Dougherty said the new format will allow the team to explore different combinations.

"The format is such that we're going to get an opportunity to see a bunch of new doubles teams," she said, and she plans to use different combinations.

"We get to flip them around a little bit," Dougherty said.

Today's three pairings include senior Marven McCulloch and junior Annette Dohanics, senior Shalby Talcott and Katie Zordani, and senior Eileen Silver and freshman Montana Crawford. McCulloch and Dohanics were the winning team from last weekend's Northwestern Invitational and are the highest seed entered in the tournament.

For singles play, the tournament will feature a bracket of five brackets. Talcott and McCulloch, along with Zordani and Crawford, will compete in the the Minnesota Flight Singles. Dohanics and Zordani will compete in the Gopher Flight Singles, Silver will be in the Marven Flight singles bracket, and Crawford and Silver will compete in the St. Cloud flight. Sophomore Aimee Tarun and Freshman Anastasia Belokon will not be entered in today's doubles bracket or on the singles brackets.

Among the 11 other teams competing are Northern Illinois University, Milwaukee, South Dakota, South Dakota State, Drake, and Iowa State. Other competitors include Northern Illinois University, Milwaukee, South Dakota, South Dakota State, Eastern Michigan, and Kentucky.

The Hawkeyes have been successful in recent years at the fall tournament. Last year, McCulloch and now-graduated Ruth Reesburger finished second in the traditional doubles tournament, although McCulloch wasn't pleased with the outcome.

"We should have gotten first," she said.

In 2012, Dougherty won the Marven Singles title, giving unde- medicated. Between the doubles and singles, Dougherty said the season-opening tournament will be a chance for the players to show the work they've put in this summer and fall.

"It allows us to put the coach's thoughts and strategies to the test," Dougherty said.

"It's a good way to show myself and the team and what we've been working for," Tarun said. "It's a good opportunity to show how well we can play together as a team and how well we can do as a team, definitely help us become stronger and better."
Harriers set for big test

The Iowa men’s cross-country squad will host the 8K Big Ten Preview on Saturday at the Ashton Cross-Country Course.

Men’s tennis set to open fall season

The Michigan State men’s tennis team begins the fall season — today — with a practice match in Evanston, Ill., against Northwestern. Both the Big Ten match and the ITA match will be played at the same time and place.

Rahmon Harris, Alex Conran, Jack Jaworski and the rest of the Wolverines will face-off against conference competition.

Matt Rogers, Dominik Franks, John Niles, and the rest of the Wolverines will face Iowa, Iowa State, Iowa, Indiana, and Northwestern.

By Courtney Borumann

The outcome of Iowa’s matchup with Pittsburgh will likely be decided on the ground.

By BYRON HAHN

Iowa’s matchup with Pittsburgh on Saturday should be a bruising match-up.

“Big Ten football, bruising. Whatever cliché label is put on it, its gladiator meets the nation’s best running defense — Iowa — against one of the most potent rushing offenses in the nation.”

The type of opposition that the Hawkeyes face off against college competition is as close to what they will see in the Big Ten.

For freshmen Theodorou, Silverstein, and Lefteris Theodorou will travel to West Lafayette, Indiana, where players will face off against college competition.

The Iowa women’s golf team is set to begin the 2014 fall season today — half of its 12-team lineup will be headed to Radrick Farms Golf Course.

For the younger guys, it’s going to be a test of what the top level looks like,” Iowa Athletics Department released this statement Thursday.

Now changed to “We need to just relax,” Iowa middle-linebacker Quenton Antonelli said Thursday: “Go ahead, line up, Connor — before I start to get running. Have a race to the football. Who’s hitting him first? Obviously I want to be the first.”

As Antonelli said, Pittsburgh running back James Conner is at the center of the Panthers’ rushing attack. He’s averaging 183 yards per game, fourth in the nation. His 67 rushing touchdowns lead the nation.

The Hawkeyes won’t be helpless. Instead, they counter Pittsburgh’s bruiser mentality with a frontline well known for stopping the run, one that has allowed just 65.7 rushing yards per game this season. They haven’t allowed a rushing touchdown for anyone with knowledge of Pittsburgh.

The outcome of Iowa’s matchup with Pittsburgh will likely be decided on the ground.
