A Simple Problem in Arithmetic

1. If an aspiring young man marry a charming young woman and they set up housekeeping when he is 25 years of age, and they pay out for house rent an average of $300 a month, how much will they have spent for this item by the time he is 45 years old? What will they have to allow for the money at the end of this period?

(a) Life is age in years at end of period.

(b) Length in years of rental period.

(c) Rent for each month.

(d) Multiply by 12 (No. months in period).

(e) Pay out for rest each year.

(f) Multiply by No. years in period.

(g) Total cost of rent in 20 years.

(h) $7,200

2. They will have nothing to show for it at all.

Moral: Don’t make a mistake. Start right by finding out all about the DUAN-AF-FREE-SERVICE DEPARTMENT. Don’t rest—build.
