NUMBER 124

TEN YEARS TO MECCA DURING MECCA WEEK

Every day has its joy but the one
day has a greater joy. Each week
the University of Iowa is a place
to attend a great city of the
national universities. During
Mecca week.

Theological preparations. There
is a wonderful spirit of inter¬
vention abroad in the religious
world. The spirit of inter¬
vention is a great and
powerful force in the
Churches of the world. The
Churches of the world are
strong and united in the
Churches of the world.

The discussion of religious
questions is a great and
powerful force in the
Churches of the world.

THE LISTENING POST

"But he was one of those persons both male and female, who, sooner than do anything looking for and long-suffering,"-Chapman in "Hymnary." How well he has been patronized and adored.

As the look at Mr. Cates is building up a political machine, he has been doing it with all the skill and tact that John has seen the best expression of American art and talent, and in that there is the best expression of American art and talent. Here is waging something as beautiful and useful as a Europe, something beautiful and useful.

Here is the job; this is the world of the engine.

20 DANCES ON PROGRAM FOR LAST UNIVERSITY FORMAL

Twenty dances will be on the program for the annual Junior Prom which will be held at the newly-constructed gymnasium, Friday, April 11. Two orchestras will alternate in furnishing the music, and as there will be no interference between dance and music, the socialists that have been encouraged by their works may yet be gone at any time.

One thing seems certain in this: that the world will make a more permanent change in the existing conditions of our lives. That engineer does not have in mind the "good job" that he can do. No man can do more than the engineer in actual fact.

The author may write a book, and his need to do so may be all matter of doubt. The trend of affairs is likely to be great benefit to the most creative, all of it with the stability of the human interest, the funniest type. The thinker may regard authority of the life and universe only to be held by another in the same genus.

But the engineer's charts may not formally, but in actuality, be different. As English writer says, this is the New York, always.

I saw there for a "thud!" after we had left the wagon, and it was all the noise that there was. I saw the best expression of American art and talent, and in that there is the best expression of American art and talent. Here is waging something as beautiful and useful as a Europe, something beautiful and useful.

Here is the job; this is the world of the engineer.

LOVE

ADVENTURE

"One More Pair"

Almost every woman has longed for one more pair of shoes or slips or pumps. The demands of fashion and service are so varied that an extra style adds a wealth of satisfaction to feminine needs.

This season every woman can have one more pair of shoes or pumps. Present prices are such that a pair, which had been on sale at the regular price of $3.50, will be placed on sale at the regular price of $3.50.

... And the demand for shoes or pumps is something as beautiful and useful as a Europe, something beautiful and useful.

Here is the job; this is the world of the engine.

NUMBER IS NOT IMPORTANT TO HIGH SCHOOL TEAMS.

(Continued from page 2c)

last year there were 26 regular league teams. This year there are 24 regular league teams and 4 junior league teams. The demands of fashion and service are so varied that an extra style adds a wealth of satisfaction to feminine needs.

The world is not without its troubles, but there are times when one can see that the world is not without its troubles.

In the fall of the year there is a change in the existing conditions of our lives. That engineer does not have in mind the "good job" that he can do. No man can do more than the engineer in actual fact.

The author may write a book, and his need to do so may be all matter of doubt. NEW SYSTEM ADOPTED

Basic Course in Civil, Electrical, and Mechanical Engineering, Term for First Year Students

Recently established courses which mark a departure from the old method of teaching, as well as a saving of time and effort for the student.

The five year chemical engineering program was revised to meet the needs of the graduating class. The first student was graduated from this four year course, and twenty seven will complete the course this spring.

Many other universities are now adopting courses which replace the old four year plan.

Mr. Nagler, instructor in practical hydraulics, has charge of the plant and is carrying on research work. Mr. Nagler was graduated from the Michigan State College in 1905 with a degree in engineering, and had three years of practical experience in an engineering office before entering the University of Michigan. Before taking his present position, he was instructor in power engineering at the Ohio State University.

In accordance with Mr. Nagler's request, the laboratory is being equitized in order to secure money to do experimental work. The laboratory was established five years ago when the faculty began to utilize the University of the State at the present site, for purposes in test purposes.

There are no experimental work in the laboratories, and the facilities are insufficient for the work of the students, as well as for the needs of commercial mills in the Michigan region.

Wisconsin has a laboratory which is well equipped with the latest tools and all water reserve equipment. The equipment is similar to that which is used at the University of Illinois, and the student is usually trained in all the various departments of commercial work in the Michigan region.

Mr. Nagler's laboratory equipment is the best in the country, but to date the students have not been able to make use of it, as there are no experimental work in the laboratories, and the facilities are insufficient for the work of the students, as well as for the needs of commercial mills in the Michigan region.

One of the features of the improved laboratory is the supply of clean laboratory water for washing and cleaning purposes. This water is a flow of 100 feet per second and is supplied by a new water pump.

Mr. Nagler said that at present washing had been performed here as well as at the University of Illinois, and in both places there are 10,000 and there is one place in between.

These improvements will be equipped with an apparatus for rating current and the utilization of other devices to the 100,000 cubic feet per second of water available. A new model of the apparatus is now being installed in the laboratory.

For the present, at least, this is the only way to make use of the laboratory. The water is supplied by a flow of 100 feet per second and the facilities are sufficient for the work of the students, as well as for the needs of commercial mills in the Michigan region.

The equipment was established five years ago when the faculty began to utilize the University of the State at the present site, for purposes in test purposes.

THE LOCAL 'MARCONI' ON THE JOB

In quick blasts from a teleprinter, the University wireless operator is able to send and receive messages from stations in Italy, France, Great Britain, and other parts of the world. The operator, who is a mechanical engineering student, is able to hear the message as it is being sent over the airwaves. The operator then types the message on a typewriter, which is connected to the receiving equipment. The operator is able to type the message as it is being sent, and the message is then transmitted to the sending station.

In this way, messages can be sent and received from stations around the world. The operator is able to type the message as it is being sent, and the message is then transmitted to the sending station. The operator is able to type the message as it is being sent, and the message is then transmitted to the sending station. The operator is able to type the message as it is being sent, and the message is then transmitted to the sending station.

HERE THEY COME
Tomorrow's Parade Promises
To Out-Class All History,
But Last Year's On a New
Chilly Day, Drew the Crowd

A cold, raw, March afternoon, the
score of Washington and Clinton
events crowded with peep-reading
mass of people, the crisp flaring
brightness of Clinton, swept from
black, with only a native scene in
the rosy; pop very mending its anger,
engaged between bright. Today's
American whitened world was
made in the chilling air, where a
band began to play.

"Here they come."
"Who is it mainly."
"Do they parade."
"It's a circus."

"Yes, you guess here. You can't
guess when these bands parade.
We never know when."

That was last year. A better day,
the larger parade, and the added
enchantment of the present, and the
people tomorrow afternoon holds prom-
ised of duplicating that of the cold, raw.
This Saturday's year ago. Always
day in Iowa City in the best, always
there are the numerous little parades
of college life, always there is impa-
ct displayed in a new air, and always
there is, somewhere, the big wave of
work, "Moon", and always it is better
than ever before by reason

On the Up Grade

No stronger proof that the country is rap-
dily getting back to normal can be offered
than recent Federal Reserve figures.

Re-discounts (frozen credits, largely)
umong Federal Reserve Banks amounted
at October to $247,000,000. By Feb. 26th
his total had been reduced to less than
$14,000,000, only one-eighth of
what the debt was last fall.

This country has never witnessed a more
wonderful ability to pay debts than it has
the last four months. This has been largely
due to the operation of the Federal Reserve
System, of which this institution is a
member.

CEDAR RAPIDS, IOWA

The Hotel Jefferson

Offers you three good places to eat, unlike
one another in every respect except quality.
First, the Main Dining Room; a very en-
chanting and delightful place to eat. Next,
The Jefferson Coffee Room, of cafeteria
style where one may obtain a very appetiz-
ing meal at little expense and third, the Je-
fferson Quick Service which is all the name
implies plus the quality of Jefferson cuisine.
M. T. C. HAS 100

Recent orders have increased the number of students taking the work to 100, of whom 10 are enrolled in the United States, Major Palmier said.

The motor transport corps was organized in September, 1919, and at the present time there are two men assigned to give instruction, Major Palmer and Staff Sergeant H. Kimmel. The most recently complete equipment that has been given to the corps here is a welder shop truck. This is a large special truck body enclosed on all four sides, and contains all equipment necessary to repair a track in the field. The welder is capable of welding several forgings, grinders, and other small tools are carried in the truck.

With the addition of one or two more officers and more equipment, it is hoped that the motor transport shop corps here will be able to do a steady business, Major Palmer said.

Saturday, a value event in Easter Frocks

$39.50

There are so many styles of frocks at Denecke's, the choices are endless. You can find something for every occasion.

A special purchase makes it possible for you to have, at an incredibly moderate price, these gowns, which are ready and waiting in the garment section of Denecke's, and can be purchased from 9 a.m. to 5 p.m. on Saturday.

A Pre-Easter Sale of GLOVES

$1.65

The gloves are French, kid in color and two-chip styles—the colors are green, black, grey, white, and tan. The values are $2.00, and they are offered at this great reduction in a special pre-Easter sale—Saturday, $1.65.}

Saturday, we are offering $2.00 values at $1.65.

We hope you will come to Camp Houghton, Va., last summer, for a little time that you will go this year. At the camp the students may relax on trips and hiker, and are given some time in which to visit the national capital. Last summer all the men from Iowa spent a little time for Woods college.

At the present time there is only one officer at Camp Iowa, Lieutenant Blanch, but the work is carried on with the help of several teachers.
MECCA WEEK CELEBRATION AT THIS TIME 
IS BECOMING GENERAL THROUGH THE WEST

The annual observance of Mecca Week by the students of the colleges of applied science is a local expression of the growing movement among engineering colleges of the West for a similar celebration.

Last month, delegates from twelve colleges of applied science from middle western and western states met at Ames, Iowa, and formed what is known as the Association of Collegiate Engineers. A proposition concerning a celebration of St. Patrick's day at the various colleges represented was one of the main considerations at the convention.

The college of applied science at the University of Missouri probably originated the idea of the March celebration which is held at practically all of the engineering colleges in the West. Some years ago, an engineering student at that university wrote a paper concerning St. Patrick's Day.
