NEW BLEACHERS ARE COMPLETED

The stadium on Iowa Field now has a seating capacity of 30,000. The new steel bleachers just completed have increased the seating capacity by 3,000. Work began early in the spring with the construction of a concrete wall on the west side which bridged the gap south of the knee to prevent the finding of Iowa Field and served as a base for the steel framework. Since then the work has steadily progressed. The first steel was set in place at the north end of the west bleachers as that twenty rows of seats were placed as a demonstration of the old bleachers.

The additional options include not only the bleachers built above the old ones, but also been added a section of forty more seats at the north end of the concrete bleachers. The steel is constructed in the west stands can be double-decked if necessary. The west side was finished in time for the Big Ten conference meet, which was held here on June 2 and 3. The east stands were given the last coat of paint on Tuesday of this week and temporary bleachers will be installed under the south end of the concrete bleachers. The steel is so constructed that the west stands can be double-decked if necessary. The west side was finished in time for the Big Ten conference meet, which was held here on June 2 and 3.

The east stands were given the last coat of paint on Tuesday of this week and temporary bleachers will be installed under the south end of the concrete bleachers.
