NINE FOOTBALL MEN TO MEET GREAT SUCCESS

Nineteen of last year's "I" men in foot-
ball will be eligible for competition.
The new practices for the nine men
in the first team are: Coach C. D.
Larson, Jr. of Des Moines, and John
K. Church of Iowa City, the last
born, Vernon C. Bestall of Des Moines,
and Paul Minick of Des Moines.
Three of these men, Sutterfield, Wal-
dick, and Kriz are entering for the
season in Waterloo. Teammen. They

THE SALE CONTINUES FOR TEN DAYS, UP TO AND INCLUDING SATURDAY, JULY 22

THE QUIETNESS IS ALMOST UNBEARABLE DURING THE FIRST FEW DAYS OF QUADRANGLE SCHOOL, declared the matron recently. There is a spirit among the fellows during the year that is peculiar only to the dormitory. They feel at liberty to drop in on their friends to eat and drink, or perhaps to indulge in a game of 500. The fact that there are so many different kinds of work being done by the students makes it possible for them to find many things in different lines. If an engineer lives next door to a pro- tode through these two yet put together and discuss each other's work.

All through the building there is a feeling that everyone knows the other fellow. This is best shown by the fact that one of Quadrangle to another, even though he does not know his name, or where he lives.

Every year the proportion of freshman who stay at the Quad gets smaller because each man who scorns the year before is given the opportunity to reserve his room for the following year. There are several men who have been in there for three years and who expect to put in the rest of their school days there.

With the coming of the end of summer school a general cleaning up of the building will take place. This is far in advance of the regular time, and this year the only improvements the janitors are expecting are the replacing of some of the screens.

Let's Get a Cold Drink at RACINE'S

RAIN OR SHINE YOU CAN'T STOP 'EM

There are about 130 men staying at the dormitory, a majority of them being experienced sailors, with a few students from the regular year mixed in. In their contract there is a compact to the regular year men.

The sailor is not awakened in summer by the messmates pulling in after midnight after making a port of the mornings; the mates don't come around to knock you from a sweet dream, because there are only two and they don't often knock around to such a room at that early hour.
For Spare Moments of the Book Lover

Prof. Percy Ruth, of the department of English, recommends the following titles for the reading this semester. These are of the greatest need. Do you know the author?

1. Pickwick Papers
2. A Romance of Range Rock
3. Macbeth
4. Jane Eyre
5. Scarlett Letter
6. The Return of Native
7. Jane Eyre
8. A Wasteland
9. The Egypt
10. Lord Jim

New Blattert to Speak

Miss Helen Blattner, of the department of speech, will lead a round table discussion at 8 a.m., July 19 on "The Correction of Speech Disorders in Public School." The discussion will be held in room 301, science building and is open to the public.

Survey Determines Relation Between Run-Off and Rainfall

Prof. Floyd A. Nagler of the department of mechanics and hydrology, assisted by Everett F. Wiley and James F. Phillips, graduate students, are making a survey of the drainage area of Ricketts creek, the small stream that runs across avenue and Washington streets. The object of this survey is to chart the long term hydrologic record on a typical small midwestern drainage area. This study involves an accurate topographic survey of the drainage basin, a detailed soil survey and yearly crop survey, the location of eight standard United States rain gauges at different points in the basin, and the observation of ground water level in farms wells located in this district.

The rainfall intensity record is kept with the tipping bucket rain gauge located in the Hydraulic laboratory in Iowa City. The water surface elevation records are to be kept at the same point. At the lower extremity of the drainage basin a recumbent water surface gage will be installed sometime in the future to obtain a continuous record of the stream's discharge. The record will probably be checked by current meter gauging from the Rochester highway bridge at the point where it crosses the stream.

This survey will be carried on for an indefinite number of years. At the present time there are practically no records of this kind on any streams in the middle west. The information obtained will serve to indicate the discharge, water supply, and highway engineers. The state highway engineering department is interested in this project as a guide in designing road culverts and bridges to take care of the flood waters. The water supply engineers are interested in this survey as a basis for determining the amount of water which a small drainage basin can yield for domestic and industrial water supplies.

The United States department of agriculture is cooperating with the department of mechanics and hydrology in performing the experimental work.

FOUR BEGIN SECOND TERM REGISTRATION JULY 20

Registration for the second session of the University, commencing July 20, and ends on the following Saturday, shall be in all respects similar to the one used for the first session, and may be made at any hour during the day, in the left stairway at the south end of the building. Students shall bring their cards and secure your tuition card. In the case of those who are unable to come themselves, they may have the permit to register cast.

Upon receiving the tuition card, the student is required to pay the fees at the secretary's office. After getting your tuition card, you must plan your path of study and secure a schedule of courses and then your section registration coupons shall be furnished accordingly.

HYDRAULIC LABORATORY WILL BE VISITED ON EXCURSION NEXT WEEK

Next Wednesday at 4 o'clock an excursion open to all students will be taken to the hydraulic laboratory and the hydraulic power plant. The first building to be visited will be the hydro-electric plant at the foot of the University Dam. The equipment consists of one fifty-foot inch cement water turbine which is capable of developing 150 horsepower when there is at least ten feet fall over the dam. The wheel consists of four with a generator which furnishes the University with light and power at 200 volts pressure. The plant continued in operation twenty-four hours of the day except in the spring when high water may erode the dam or during a very dry season when the flow of the Iowa river is insufficient to drive the turbine. It takes 924 cubic feet of water a second to drive the whole plant. The flow of water in the Iowa river sometimes gets as low as eighty cubic feet per second in the summer, while in flood times the river may discharge as much as 3,480,000 cubic feet per second, which was the discharge in 1910. For 96% of the year, however, the flow of water in the Iowa river is less than the capacity of the plant. As soon as appropriations are available the University expects to double the capacity of the plant. The second building that the visi tors will inspect is the hydraulic laboratory. The power plant of this laboratory has the largest capacity of any kind of hydraulic machine ever especially adapted to large scale water or sewage treatment. In this building the various water sewage devices will be demonstrated and a large centrifugal pump will be seen in operation. This pump was given to the university by the Good Pump Co. of Seneca Falls, N. Y. There is also installed in the building a fifty-one-inch McCormack water wheel, the lowest of any laboratory in the country.

In the canal approaching the building the visitors will see the experimental apparatus used last year in testing designs for hydro-electric develop ments on the Cedar river at Rochester. In the canal, the water will be interrupted in such a manner that the potential difference between the water surfaces will be a certain amount and the current is so regulated that the water pressure can be varied from zero to the highest attainable. The total water per second over the dam is then available for the development of power. The three objectives of the experiment were to test the efficiency of a water power plant during the flood stage of a stream. Before leaving the building all the stu dents will be taken to the record gauge station where two-keeping continuous record of the flow of water to the Iowa river. All the electric car is employed in this operation to aid the work. Prof. F. T. Nay of the hydraulic depart ment says that all students who de sire to ride in the car may do so.

Townsend's attic, which has occupied the building at 22 south Clinton for the last forty years, will move to another location during the vacation.

ANNOUNCEMENT

Professor F. E. Pierce of Yale University, who is one of the English department of the University of Wyoming, and who has come to speak with the University of Wyoming for the closing year at seven o'clock. "The Spirit of Those United States towards Religion" is the subject of his address, and his delivery is attended with a cordial invitation to all who may hear him. Robert Bender is in charge of the service.

LATE AUTO SALE POSITION AT UNIVERSITY OF WYOMING

Donald V. Lord, instructor in the Department of Philosophy and Psychology, has accepted a teaching position at the University of Wyoming for the coming year. He is to take the place of Dr. Dewey, who is now the head of the department at the University of Wyoming.

Mr. Lord will take all of the classes formerly conducted by Dr. Dewey, but he will be able to find an assistant in the department. An advisory committee will assume this responsibility.
