Late Registrants To Report for Draft Or Be Deemed Delinquent

WASHINGTON, Oct. 17 (AP) - Officially delinquent in the draft registration, some 1,200 tardy men were told yesterday that they would be marked delinquent unless they report to the draft stations by noon today.

May Draft 800,000 by June

WASHINGTON, Oct. 17 (AP) - The May draft might include 800,000 men. If so, it would be the largest draft in American history. The draft board, according to a leading military newspaper, is ready to register an army of 800,000 men.

Expert on Destroyers Given New Position

BY THE ASSOCIATED PRESS

Britain elevated one of her youngest admirals, 26-year-old Lord Louis C. Trenchard, to command the new force. He was a brilliant former officer, who had served in the Royal Navy before the War.

The first-grade fleet went on stream yesterday, according to the Associated Press, and the ship was commissioned.

Young Admiral Appointed Head of Fleet

BY THE ASSOCIATED PRESS

He announced that a new force was being formed to deal with the situation on the European continent.

Joe Cannon, the first American admiral, was appointed head of the new force.

Wally Hunt, the 26-year-old admiral, was appointed head of the new force.

The new force, which was composed of the first-grade fleet, was commissioned yesterday.

A Century of Greatness — Live About

In 1919—very early in the new game of radio—some non-commercial station first put up the "air" from the University of Iowa. The first regularly scheduled program was started by an engineer named Albert Bean, who made his broadcasts from the Old Capitol building in Iowa City. bean was a part-time lecturer in electrical engineering and also taught the course in broadcasting at the university. He began broadcasting on the 100-watt crystal set at 1350 kilocycles, using the call letters "WUI" which were assigned to the university by the Federal Radio Commission. The station was called "Radio Iowa" and its program was played over the air by a loudspeaker in the Old Capitol building. It was the first regularly scheduled program in the United States and it started on January 19, 1919.

WUI was a small station with a limited audience, but it set the stage for the future development of commercial radio. It helped to popularize the medium and establish it as a viable form of entertainment and communication.

Of Tests and Troubles

WUI's early history was marked by setbacks and successes. The station faced many challenges, including limited funding and technical difficulties. However, it persevered and continued to grow, eventually becoming a major force in the radio industry.

Today, WUI is known as KVOE, the \"Voice of the University of Iowa.\" It continues to serve as a model for other radio stations and has been a leader in many important developments in the field of radio broadcasting.

A Man About MANHATTAN

Officiates—That Mancho Jumbo Nobody Could Understand—

By GEORGE TUCKER

There was a time, not very long ago, when the standard of radio was the man in the white suit who could be heard in every home. If you happened to be on an October day in 1919, you might have heard the voice of a man who was just beginning his career in radio. His name was George Tucker, and he was the first radio announcer in the United States.

Tucker was a man who could make people laugh. He had a way of taking everyday things and turning them into something funny. His jokes were clever and his stories were entertaining. People loved to listen to him and he became a favorite of many radio listeners.

In 1920, Tucker was hired by the new radio station in New York City, which was then known as the \"Voice of the People.\" He became the first regular announcer on the station and his popularity quickly grew. Tucker was a pioneer in the field of radio entertainment and his work helped to lay the foundation for the modern-day radio industry.

And there's a lot of beauty in the things that we see, as well. Here in Iowa, we have a lot of good country music and the air is filled with the sound of people singing and playing their instruments. It's a wonderful time to be in the state of Iowa, and I am sure that you will enjoy your visit here. Your host, the Governor of Iowa, Jerry Stem, and I, along with the people of Iowa, wish you a safe and happy journey.

Station WSUI Traces Beginning to Code Messages Sent Thirty Years Ago

By MARGARET KOHLEN
This is the story of a small, unique invention that developed into a thriving enterprise and a model for the future of broadcasting. The invention was the first practical system for encoding and decoding of messages using Morse code, and it was named the "Morse Code Dial." The system was invented by a graduate student at the University of Iowa, Carl Menzer, in 1930.

The invention began as a project for a course in electrical engineering offered by the Department of Electrical Engineering at the university. Menzer was one of the first students to enroll in the course, and he became interested in the possibility of improving the efficiency of Morse code communication. He began experimenting with various encoding and decoding techniques and eventually developed a system that could send and receive messages at a much faster rate.

Menzer's system was tested in 1932 and found to be successful. The system was named the "Morse Code Dial," and it was demonstrated to the public at that time. The system was further developed and improved over the years, and it eventually became the standard for Morse code communication.

The Morse Code Dial was first used in 1933 to send messages between the University of Iowa and the National Bureau of Standards in Washington, D.C. The system was subsequently used to send messages to other locations around the country, and it quickly became a popular method of communication.

The system was also used during World War II, when it was essential to send and receive messages quickly and accurately. The Morse Code Dial was used to send information about troop movements, enemy activity, and other important matters.

The system was further developed and improved over the years, and it eventually became the standard for Morse code communication. The system was also used in the development of the first radio teleprinter, which was used to send and receive messages through radio waves.

The Morse Code Dial was finally phased out in the 1970s, when it was replaced by more advanced methods of communication. However, the system remains a symbol of the ingenuity and creativity of the people who developed it, and it continues to be an important part of the history of broadcasting.
Can You Coach Students In Any Courses?

If you can, a small ad in The Daily Iowan school will bring your name before 500 students, who are anxious to become better students and coaches. The rates are reasonable. 2 line ads, $2.00 a month. 1 column wide by 1 inch $5.00 a month.

RUTH WILSON

No one can study and practice with WSUI. Jim has accomplished one mission, made another, done a third, and we always have a fourth one.

The versatile abilities of Jimy, known, learned, taught and tested by the high school journalism students in the nation, WSUI has fulfilled its primary objectives.

The main goal of WSUI was to be a communications school. The student papers were to be the platform. One of the most outstanding social studies in the nation, WSUI has fulfilled its primary objectives.

Ruth Wilson

High School Receptionist

F. Kenneth Stratton, Hansen Greet

"Good Morning, Welcome to the Iowa High School Press Association Conference.

The乳房 of the present meeting is the most important, and the one that you can always count on. The student papers, the three and a half hours, are representative of this.

The students will be Ruth Wilson, head of journalism at central high school, and Mildred Payne of Iowa State University.

The students will be Ruth Wilson, head of journalism at central high school, and Mildred Payne of Iowa State University.
