Hurricane Goes Toward Coast

Identify Body
As Missing
Attica Widow

ATTICA, Iowa (AP) - The inventor turned body of a woman found at Attica, N.Y., has been identified as that of Mrs. Belle Burton, 61, of Atlantic, Iowa.

Mrs. Burton's body was found May 30th by New York State Police. The body was identified by a fingerprint in the workshop of the woman's husband, who was found dead in the same workshop.

The fingerprint was compared to a photograph of the woman's hand and was found to be a match.

Mrs. Burton's body was found in a room of the workshop where she had been working. The workshop is owned by her husband, who was found dead in the same room.

The woman was identified by her fingerprints.

An examination of the body revealed that it was that of a woman who had been working in the workshop. The body was found in a room of the workshop where she had been working.

A Moral Crime—

One of the moral aspects of prejudice and discrimination is that they are so difficult to prove.

A criminal lawyer doesn't have much of a case in court unless he can give the jury facts against the individual being tried.

So, the way with discrimination and the sociology holds true because discrimination is an effect of a cause—private attitudes.

The case in mind is one of those, the Eugine Peterson problem in Iowa City, Peterson, a former army lieutenant, and his wife, tried to find an apartment here that he could move into in September.

After a lot of being turned down everywhere they went, Peterson was told and discouraged. He reported that Iowa City landlords shouldn't be a Nigger.

What makes Peterson's dilemma as typical as it is that he could never really prove the prejudice or the reasons for the discrimination.

The landlords or apartment managers would tell him that they personally would never rent to Negroes but that their "other tenants wouldn't like it."

The fact that he would be told was alight with the message of the place but that the owner wouldn't go for it.

On the other hand, the landlord would find a convenient excuse for backing out without admitting his prejudice.

The only conclusion to be drawn is that people generally are afraid to admit their prejudices and attempt to hide their discriminatory practices.

Because discrimination is a moral infraction of the law and not necessarily a criminal offense, the case is not a

A criminal lawyer doesn't have much of a case in court unless he can give the jury facts against the individual being tried.

"The great fear in the West is that the owner wouldn't go for it.

The tenements are reserved. It is almost a forgotten man, pleading for social gains."

Yanks Drop Orioles 5-4, 12-6
To Lead American League

NEW YORK (AP) - The New
York Yankees dropped a
doubleheader victory
Saturday and tied (121-12)
to take over the lead in the American
League pennant race.

The Yankees salvaged their
winning streak, starting a three-game sweep
of the last-place club in the first game, and
bounced Cleveland off the summit in the
second contest, one of their nine losses to the
North leaders.

The doubleheader gave the
marginal New Yorkers a ball–
game lead over the Chi­
cubs.

2 Men Sentenced For Drunk Driving

Philip W. Karmel, 27, of 351 W. 8th, was sentenced to 90 days in the Iowa City Workhouse for a charge of driving while intoxicated. A North Okoboji, Iowa, man, John A. Francis, 26, paid a $25 fine for a charge of driving while intoxicated.

Karmel was given a $250 bond to provide money for his personal recognizance. He was charged with operating his automobile in an intoxicated condition.

Both men also had their licenses suspended for 15 days.

Karmel was released on bond, wait a week until his case goes to the Iowa City Workhouse and Francis was released on $25 bail. Francis was charged with operating his car while under the influence of alcohol.

For summertime comfort and convenience, we depend on electric appliances more than ever this year. We mean it. We're depending more and more on electric wiring, too. Here's your wiring system been improved to accommodate the appliance you've added over the years?

Have Your Wiring Checked

Before Adding Seasonal or New Appliances

When summer temperatures soar, many appliances work overtime. This means heavier load on your home wiring system. Where there are plenty of circuits with large enough wires — voltage drops, motors heat up, and appliances grind away longer than necessary. Unless these near their limits, it is necessary to hook up additional appliance cables and add more ampacity to the circuit to assure safety.

On the average, about one-third of all household wiring systems can be improved.
