**The ramp**

This is the view looking south from the corner of Lou and College streets. Here we can see the<br>ICN-WSDA parking ramp, the view is best towards the southeast direction with the city park in the background.

**IN THE NEWS**

**briefly**

Today

Now day to day. Highs about 40 variable cloudiness. Low tonight about 30 with more cloudiness and maybe some April showers.

**Germ ban**

WASHINGTON (AP) - The United States, the world's most powerful germban, is planning to lift a ban on the use of germs in the manufacture of drugs. The ban was put in place to restrict the deliberate release of biological agents for the destruction of already existing armies.

The ban was lifted in 1945 at the end of World War II. The move was opposed by Lord Creer of Great Britain and the United States government.

**Eyeballing**

CHICAGO (AP) - Treasury Secretary John Connally has been asked to take over the position of Treasury Secretary because of the economic problems.

**Going up**

DES MOINES, Iowa (AP) - The price of 100 bricks of tobacco has reached an all-time high. Today's high of 100 bricks of tobacco sold in downtown Des Moines.

**Shakey**

TEHRAN, Iran (AP) - An earthquake leveled several western Tehran suburbs today, causing several injuries and one death. The death toll is expected to rise as rescue efforts continue.

**Push for students to choose free use**

BY JASON McCORMICK

Daily Iowa City Editor

The Daily Iowan's editorial board is considering a proposal to require all students to choose between free use of the university's resources or a subscription fee. The proposal is based on the idea that the university should provide resources for all students, regardless of their ability to pay.

Under the proposed reform, students would have the option of choosing between free use and a subscription fee. The proposal would also allow students to choose between full-time and part-time access to the university's resources.

The proposal is expected to be considered by the university's Board of Regents at its next meeting.

**Financial woes fueled for Hawkeye yearbook**

Financial woes have increased for the student yearbook, the Hawkeye, due to budget cuts and a decrease in advertising revenue. The yearbook, which has traditionally been a source of extra income for the university, is now facing significant financial challenges.

**SPLI Board votes to cease publication next year**

The SPLI Board has voted to cease publication of the student newspaper, the SPLI, due to a lack of financial support. The newspaper, which has been a voice for student opinions and issues, will not be published in the fall of 2023.

**Vietnamization faces major test in Communist offensive**

The Vietnamese offensive in the central highlands, which is seen as a major test of the American military commitment to the war, has intensified. The North Vietnamese have launched a series of attacks on American bases, including the US airbase at Bien Hoa, prompting concerns about the sustainability of the American military effort.

The offensive is part of a broader strategy to pressure the United States to withdraw from the war, and the North Vietnamese have been successful in gaining concessions from the American government.

**Associated Press news analysis**

Vietnamization faces major test in Communist offensive

The North Vietnamese general offensive in the central highlands is seen as a major test of the American military commitment to the war. The offensive is part of a broader strategy to pressure the United States to withdraw from the war, and the North Vietnamese have been successful in gaining concessions from the American government.

The offensive is part of a broader strategy to pressure the United States to withdraw from the war, and the North Vietnamese have been successful in gaining concessions from the American government.

Kennedy: ITT lobbyist paid by Republicans

WASHINGTON (AP) — ITT lobbyists in Washington met with two Republican Senate committee members during the hearings on the telephone industry in Iowa City.

The meeting was held amid reports that the Justice Department is investigating claims that a Republican lobbyist working for ITT was involved in providing information to senators to influence their votes on the bill.

The meeting took place on the same day that the Senate Commerce Committee began its hearing on the ITT case.

ITT lobbyist cautions against the hearing being held in Iowa City.

The lobbyist, who refused to be identified by name, said the Justice Department was not investigating him personally.

The lobbyist said he had met with several Republican senators during the week to discuss the issue of the ITT lobbyist's role in the hearing.

He said the senators were concerned that the lobbyist's role in the hearing could influence their votes and that he had offered to appear before the committee to answer questions.

County jail gets top rating

Johnny County has an "excellent" jail, according to the Iowa Board of Mental Health.

The bureau sent a letter to the board saying that conditions at the county jail were up to par and no improvements were needed.

The report, which is based on a inspection of the jail, praised the county for its efforts in maintaining a safe and secure environment for inmates.

The report also complimented the county for its commitment to providing humane treatment and maintaining order at the jail.

"The March. Board of Supervisors and the county's efforts in maintaining a safe and secure environment for inmates have been appreciated," the report said.

The bureau also commended the county for its efforts in providing adequate staffing and training for jail personnel.

"The county has taken steps to ensure that its jail staff is trained and equipped to handle the challenges of inmate care," the report said.

The report noted that the county has implemented several reforms aimed at improving the conditions at the jail, including the installation of new security systems and the development of new policies for handling inmates.

Hulk gets settlement for fire loss

An insurance settlement has been reached in the case of the Hulk, the student-run bowling establishment at the University of Iowa.

The settlement, which is the result of a fire that occurred last month, will provide funds to cover the costs of repairing the building and reopening it for business.

The Hulk, which is located in the University of Iowa's Iowa City campus, was closed after a fire started in one of its rooms and spread to other parts of the building.

The settlement, which was reached after negotiations between the university and the insurance company, will provide funds to cover the costs of repairing the building and reopening it for business.

The university and the insurance company have been working to resolve the issue since the fire occurred in late November.

The settlement agreement will provide funds to cover the costs of repairing the building and reopening it for business.

The settlement agreement will provide funds to cover the costs of repairing the building and reopening it for business.
Flexible plan needed

In MUSKOGEE's

For People Against The Ramp

Experiences with akasters have shown that parking ramps are structures that must be designed to meet the public expense.

Dubuque is a city that built two ramps in the downtown area, as part of the Urban Renewal. The expected downtown growth has not taken place. Parking ramp fees have had an adverse effect on the city's infrastructure and the city is unable to cover the costs because of the debt burden.

A shopping mall was also voted against by the voters in this city, and the mall is built. The city is still unable to cover the costs because of the debt burden.

A pedestrian mall was designed not to have parking ramps, and instead it was planned and designed for pedestrian use.

The Daily Iowan

To the editor:

Parliamentary proceedings of the ramp, who may realize a financial gain if it is built, have gone so far as to use the environmentally justifiable for construction. Perhaps it is time for a formal statement from a group of citizens. Citizens for Environmental Action, who have been working for years to preserve and improve our environment, and who have realized no financial gain when the ramp is not built.

It should be noted that while the proponents of the ramp urge that air pollution be reduced due to the reduction in the number of cars circulating downtown looking for a parking space, they also suggest, or imply, that the ramp will help "revitalize" the downtown area. How could it help revitalize the downtown? It will help attract more motorists, more cars, more air pollution. The proposed ramp is not a solution, it is a substitute!

Today is the day when you should find time between classes or have one less coffee break and get your body into a voting booth and tell the City Fathers to shove their parking ramp up their civic behinds.

Today might be summed up as follows:

The modern solution To Air pollution Is NOT
To force citizens in. It is true that more shoppers need to be transported to the developments which by all recent programs has been allocated to the Mall. In exchange for a ramp, it increases the number of cars circulating downtown, which (in view of what the future can hold for Iowa City) I ask you to vote NO TODAY.

Moody Blues remain terrific

BY TESI PARCHUS
For The Daily Iowan
In a very few weeks from their concert on the
31st, the Moodies will be at the Assembly Hall. To
determine the health status of this important
question, one of the finest bands of the decade, is
seen in the smallest symphony orchestra in the
world. Moody Blues are, without question, one of
the finest bands anywhere. Strangely enough,
this month in White Bear, there are Justin Hayward on
guitar, and of course, the mellotron. While
there are not too many people who have been
exposed to pesticides-including

Iowa, the Moodies are right at

Pesticides studied
Weather, humidity, diet, stress, grooming, and

Care and feeding of the common bicycle

Keeping your bike clean is a mountain but essential part of bicycle care.

If you go out on the road, wipe the bike off when you get home. Rub the chain and parts exposed to the weather, removing oil or rust as well as possible. Keep off, and any other parts away from dust and brake fluids. If you ride in dirty areas, clean the dust off, setting time, paying attention, always to moving parts.

Your chain deserves all the love you can give it. On a good bike, especially with derailleurs operable on the rear axle which shift the chain from spoon gear to spoon wheel, the chain kicks at its knees and hampers all about every two weeks if you use the bike regularly.

Cheaper bikes can get by with less, only if you love them less.

Riding that has derailleurs have a special link in the chain that comes apart really easily but can be readjusted easily simply by testing for the tension. But that's different from the rest.

All the time you hear about lubrication is that there's a few places not to use oil.

1. Bikes have oil with a light grease, because oil washes out the easy.

2. Brake shoes must be greased, and all the oil will sit on the bearings and grease it.

3. Bikes should be lubricated at good points, but remember to keep off oil the parts.

Bikes shouldn't need oil, only be cleaned, but a little couldn't hurt

Keep in mind some special attention because they hang out not there, unlike three speed hubs like the Shimano Sturmey hubs.

Keep derailleurs clean, and oil it on everything except the chain, which needs light grease. Learn how to adjust your derailleurs, because sooner or later the chain will shift, and they'll need lubrication.

Move around them a little if you screw things up, you don't always have them in a lamp shade. Keep to mind that there are only two adjustments to make, one is long term going out of gear, the other from pushing the chain too far. With a derailleurs you have four adjustments in all, but oil is the way to do it in the first case. Three speed hubs are easier.

Many of them have oil fittings—all up the little cone and put in some light oil every two months. Adjustment is easy, and always well explained in the book or leaflet you got with the bike.

Cogs are little things that keep wheels from whirling, prevent foot jiggling, and slackens from coming in your hands. They need adjustment now and then, and he a little today.

On wheels, they should be lubricated at pivot points, but remember but is really complete, cheaper bikes can get by with less, only if you love them less.

Major league baseball owners added $100,000 to their offer of player strike pay, their third 
offering in four days, but the union rejected the offer,

apparently bringing a negoti-

ation halt to the dispute. 

Gibson said the problem is that the players have to be paid the 

strike pay on an escrowed basis. The offer would also have a 

feature that if the players accepted the offer and games were played Thursday,

25 percent of the escrowed money would be released. 

Another sticking point, Gibson said, is that the owners have refused to 

state how the money would be divided among teams.

No. 1 singles match was

scheduled for 3 p.m.
The striking players issued a statement yesterday via their public relations office saying they were willing to call off the meeting if the club owners in New York ceased any talks they had been having with the players. They also said that if the players were not paid during the strike, they should not be paid when they return to their jobs.

The statement went on to say that the players' association had proposed a new and fair mediation process that would be acceptable to both sides. They also said that the "hardliners" would "throw a lot of heat on the players" if they were not paid.

The owners counterproposed a plan that would allow the players to be paid $100 per game during the strike period, but that the players should not be paid if the games are not made up. The owners also proposed a settlement that would allow the players to be paid $100 per game if the games are not made up, but that the players should not be paid if the games are made up.

The statement ended with a note that "the owners are not asking for back pay during the strike period, but that the players should be paid if the games are not made up."
Rediscovers Pleasures Of Traveling By Car

Properly Maintained Auto Can Help You Rekindle ‘That Special Feeling’

This summer why not take your car on a second honey­

moon? Certainly, being the spouse and the children along

doesn’t take the special feeling out of your car. But

you might find that the car was growing old.

But with the coming of the vacation season, you can re­

discover the pleasures that come from traveling by car. More­

over, this discovery will be even more enjoyable when your car

is in optimum condition.

Start by visiting your favorite service facility.

Ask your service technician to check over key com­

ponents of your car for safety and performance.

If it is necessary to perform the services necessary to

ensure a trouble-free running car, be sure to look for a

manufacturer-prescribed tune-up.

Free Pamphlet Tells Solution For Pollution

A 19-page pamphlet telling ‘What You Can Do About Your Car’s Ex­

haust Emissions’ is now available free from Champion Spark

Plug Company. The pamphlet explains the mechanics of the

engine and gives advice on how the car owner can help re­

duce pollution. To obtain a copy, send a self-ad­

dressed, stamped envelope to:

manufacturer-prescribed tune-up.

Exhaust Pipe Deposits Show Engine Wear

A spot, notably on deposit at the edge of the piston, is the tip-off that the engine is

malfunctioning. A thorough inspection of the engine’s

exhaust system shows the cause of the problem.

A normal exhaust pipe contains a deposit of soot, carbon and

rust. If a deposit is found that is grey/black, it is
due to overheating or lack of sufficient lubrication of the

engine. Some of the common causes are:

- Ignition problem
- Poor fuel mixture

To help the service in­

dustries, Champion Spark

Plug Company has re­

ceived the prize of techni­

cal merit for its latest

engineering service tech­

nique. Champion Spark

The customer may even complain after a tune-up that his car is not as peppy as it used to be. By gaging your car in shape, your journey will be as safe and pleasant as a well-maintained auto can make it.

According to Better and Safer Motoring, the precautions you take hold the key to keeping your car in shape. Farmers' regional car clinics offer check-ups and tune-ups to demonstrate most any highway mechanic how to bring car emissions, adhering strictly to manufacturers' time-of-use recommendations. For instance, on hospitals, in the first place of air pollution, the technicians are being urged to help educate their customers. The man in the car service factory should educate himself and the man in the factory to go the same job.

The engineers added, "Just as we, through our Champion Air Cleaners, are educating motorists to prevent low-grade oil from the same engine, it is being urged to help educate their customers. The man in the service factory should educate himself and the man in the factory to do the same job.

Champion's technical service engineers are expecting that engines are tuned for low emissions, adhering strictly to manufacturers' time-of-use recommendations. The customer may even gripe about a slightly rough idle, "While it would be simple for the mechanic to follow manufacturers' recommendations and admit testing and emissions, the customer would do a great disservice to decrease air efforts."
Air Pollution Levels Receding

People who yearn for the old days when air pollution was not considered a problem, may have their wishes fulfilled. Improperly balanced wheels can reduce the life span of your tires by as much as 30 percent. Check wheel alignment with balance check every six months.

Indicating the effectiveness of the new systems, 25 percent of present-day pollution from cars comes from owners who are not equipped with the latest pollution devices. Averaging emission levels from roadside from cars is about 20 million tons. By 1990, the annual figure will be about 10 million tons. Improvements in cleaner air will continue to depend on the cooperation of all.

Maintenance Important

While corrected and improved anti-pollution devices will be clearly responsible for reductions in emissions, the positive conclusion reveals that at least an average of 30 percent reductions in pollution levels can be achieved by a tune-up.

To help air pollution levels on their way down, an annual tune-up and servicing of antipollution components sharply reduces power loss, and recommendations in retail.

Importance of Right Driver Attitude

The real game every day at Indianapolis 500 is a battle for the lead behind the wheel. Yet most competitions are going for a win. We're running for the championship. And the only way to win is to have a track, that we're performing the car. And that's the determination to drive safely and intelligently.

One way Veith got his champion's attitude is to remember right away, Reese is a former Rookie of the Year at 1953, in Canada. Veith is one of eight Australians who've participated in Champions' program. The program has been designed to help the drivers to do the best job possible in the best time.

For every Volkswagen sold in Italy, 1 Fiat is sold in France. For every Yugo sold in Italy, 1 Fiat is sold in France. All these cars, from the small cars, are equipped with the latest anti-pollution devices. You can't fool a European.

So, when it comes to small cars, you can't fool a European. But you can't fool a European. You can't fool the American market. In this way Veith gets his champion's attitude. And that's the determination to drive safely and intelligently.
**Police Officer Frequently Heears Motorists Object**

By CHARLES BARUCH

"What do you mean my brakes are shot? The tire stopped, didn't it?"

The motorist's reaction was considered not unusual by Office Frank Blankwell. Office Blankwell (not his real name) worked in a police station in Des Moines, Iowa. The motorist was indoors about to drive his car back in after working a 10-hour shift. The car brake lights were shot. The motorist was not used to driving and was somewhat nervous. He was trying to avoid running into the furniture in the room that he couldn't see or hear.

"I'm afraid it's our fault," the motorist declared. "I was going to get a new one but I haven't had time..."

"I can only think of one way to avoid a collision," Office Blankwell said. "Shock absorbers?"

"Well, it's better than scraping against the pavement, isn't it?"

"Good idea," Office Blankwell said. "That way you can drive your car and get it fixed at the same time."

"But I would be better if we could pull our car into the garage."

**Keep Camera Handy, Film Vacation Travel Events**  

Filmmakers say you’d be surprised if for those who made American films who record events and special occasions that are present, probably not many are lost because of mistakes or simply because the camera is not handy enough.  

But number one for the filmmaker is the time when the film is never to pack away the camera. Bring in hand to the event of the day, never to preplanar, so that something special happens, and you’re turned off.  

Correct Trouble Before Changing Burned Out Fuse  
The most common fuse is the one in your house or your car, so don’t throw it up with a broken fuse.  

Before it’s in your house until you make sure the old fuse has a blown fuse, like a wreath, with you something is wrong. Find out what.  

For example, suppose your 6-Volt, 6-Amp, 7.20-Watt light bulb is blown.  

If you throw out a new one, and you are back in business... for a little while.

Canadian Problems

Well over half of all cars inspected in provincial surveys are rejected because of malfunctions. A Canada Safety Council survey stated that more than 3,700,000 out of the preventive nature of inspection figure of 8,250,000 under¬ went some kind of inspection but that the result was not available for many vehicles.

In 1969, the last year for which statistics are available, 1,725,000 vehicle inspections were carried out recently, poor emission devices designed to cut down pollution. Problems included defective and inadequate systems for examining, looking for excessive wear, exhaust, poor alignment, bad and worn tires. In 8,250,000 inspected, 4,000,000 were rejected for failure to meet provincial standards. Of all the cars, only 6,250,000 were deemed fit for the road, and many were rejected for excessive wear, defects in emission control, and other reasons.

In the near future, be sure to make your reservations with us now!
Drenched Road. Worn Tires Can Lead To Hydroplaning

An oarsman that moves on a highway with water can create a hazardous driving condition. When standing on a high­ way and is difficult to stop the car. When the water rises above the depth of the tire grooves, the hydroplane is created. The depth of water standing on a highway can be hydroplaning. Standing on or running across a highway.

The most common cause of standing on a highway is when the depth of your tire grooves is less than the depth of water standing on a highway. When the water rises above the depth of the tire grooves, the hydroplane is created. The depth of water standing on a highway can lead to hydroplaning.

Water standing on a highway can lead to hydroplaning. Standing on a highway can create a hazardous driving condition. When standing on a highway with water, it can create a hazardous driving condition.

Replacing Filter

When your automatic transmission lapses to slow you can be in deep trouble. So it's an obvious that preventive maintenance pays off. With a high tolerance for fine particles, automatic transmission has offered relatively low operating costs --and neglected --until too often...resulted in automatic transmission failure.

Starts out with its big job --maintaining the air conditioning oil plus a range of tasks on the engine, the automatic transmission is equipped for the strain of months, heavy traffic or trailer towing conditions. Automatic transmissions under heat and general wear and tear can cause a filter to become clogged.

Automatic heat creates a artificial condition that can cause a filter to become clogged. A frequent change of fluid every 12,000 miles can prevent this. But a large number of research and testing are required to select an automatic transmission fluid that not only won't lead to failure but won't, with important additional, helps to keep internal parts clean. As a rule, it is a good idea to check tire pressure of the car.

There are basically two types of automatic transmission fluid: oil and fluid, or a lot later for fluid transmission vertical or replacement.

DIRECTIONS:

Emissions Tests
Our experts are ready to perform the most thorough test of your vehicle's performance. We are able to check the engine and other aspects of your car to ensure it is running efficiently.

To Decob' Car Engine
A favorite end-of-the-summer recipe is to "taste the coke" out of a dogsleeve engine to take the load off a high pressure recycling system. To perform the test, the engine must be removed from the chassis and suspended on a shop stand. The engine is then run at a steady speed for a period of time, and the fluid temperature is monitored. The test is to vary speeds on the highway.

Lady Driver Offers Travel Tip
To Help Prepare For Vacation

By JOEY CARR

This is the time when you and your family are thinking about a
vacation trip. It is a good time to make sure your vehicle is ready for the trip.

1. Start with fresh oil and a new air filter. Check the tire pressure. Make sure
the brakes are working properly.

2. Check the wiper blades and the battery. Be sure the battery is charged.

3. Check the coolant level and the antifreeze concentration.

4. Check the belts and hoses. Make sure they are in good condition.

5. Check the lights. Make sure they are working properly.

6. Check the steering and suspension. Make sure everything is tight and secure.

7. Check the brakes. Make sure they are working properly.

8. Check the transmission. Make sure it is in good condition.

9. Check the exhaust system. Make sure it is in good condition.

10. Check the radio and the CD player. Make sure they are working properly.

11. Check the compass. Make sure it is in good condition.

12. Check the steering wheel. Make sure it is in good condition.

13. Check the brakes. Make sure they are working properly.

14. Check the transmission. Make sure it is in good condition.

15. Check the exhaust system. Make sure it is in good condition.

16. Check the radio and the CD player. Make sure they are working properly.

17. Check the compass. Make sure it is in good condition.

18. Check the steering wheel. Make sure it is in good condition.

19. Check the brakes. Make sure they are working properly.

20. Check the transmission. Make sure it is in good condition.

21. Check the exhaust system. Make sure it is in good condition.

22. Check the radio and the CD player. Make sure they are working properly.

23. Check the compass. Make sure it is in good condition.

24. Check the steering wheel. Make sure it is in good condition.

25. Check the brakes. Make sure they are working properly.

26. Check the transmission. Make sure it is in good condition.

27. Check the exhaust system. Make sure it is in good condition.

28. Check the radio and the CD player. Make sure they are working properly.

29. Check the compass. Make sure it is in good condition.

30. Check the steering wheel. Make sure it is in good condition.

31. Check the brakes. Make sure they are working properly.

32. Check the transmission. Make sure it is in good condition.

33. Check the exhaust system. Make sure it is in good condition.

34. Check the radio and the CD player. Make sure they are working properly.

35. Check the compass. Make sure it is in good condition.

36. Check the steering wheel. Make sure it is in good condition.

37. Check the brakes. Make sure they are working properly.

38. Check the transmission. Make sure it is in good condition.

39. Check the exhaust system. Make sure it is in good condition.

40. Check the radio and the CD player. Make sure they are working properly.
Lady Driver Offers Travel Tips
To Help Prepare For Vacation

By JODY CARR

This is the time when you and your family are beginning to be reminded that if not your big road trip, then your vacation is just around the corner. You probably think of the fun times you'll be spending and the sites you'll be seeing, but have you considered some of the costs and safety details available to you to make your trip a safer one?

When you think of safety and road costs, you've been thinking of the gas stations, the motels, the fast-food joints, the movies, and everything else you may need for your trip. But have you considered the gas, electricity, air conditioning, etc., you need for your car, to keep it running properly?

One of the most important things you need to keep in mind is the safety factor. You have to be sure to check your tires, oil, water, and other important parts to make sure your car is ready to go. Be sure to check your belts, as well, to make sure they're in good shape.

Also, make sure you have enough money for your trip. Don't forget to bring along some extra cash, just in case you need it. This is especially true if you're planning on making a lot of stops along the way, as well as in case of emergencies.

It's a good idea to check the tire pressure before you start your trip. This can help you avoid a blown tire, which can be very dangerous and can cause a lot of delays. Be sure to check the tire pressure of all your tires, including the spare, to make sure they're all at the correct pressure.

You should also make sure you have a first aid kit in your car. This can help you treat any minor injuries you may have, as well as any other medical issues that may arise during your trip.

It's also a good idea to have a car phone, in case you need to call for help. This can be very useful if you're lost or if you need to call for assistance.

Remember to drive safely and to be aware of your surroundings. This can help you avoid accidents and can make your trip a lot easier.

V-Belt Inspection

Summer marks a vacation time for most people and this means many miles on the highways to and from various destinations. Keeping your car in top shape is crucial to a safe and enjoyable trip.

At this time of year, it's important to get your car's belts checked. If they're not in good shape, you could be in for a problem on the road. V-belts are used to power many of the accessories on your car, such as your air conditioning, power steering, and alternator.

If your car sounds rough, or if you notice any vibrations while driving, you should have your belts checked. You can do this yourself, or you can take your car to a mechanic for a professional check.

Belt inspection is a simple process that can help you avoid a lot of problems down the road. So, don't forget to give your car's belts a good check before your next trip.

V-Belt Inspection

Remember, your belts are a crucial part of your car's performance and they need to be in good shape to keep your car running smoothly. So, take the time to check your belts before your next trip and you'll be on your way to a safe and enjoyable vacation.
Lots of people are concerned about pollution. But concern alone won’t stop it.

Tests on cars with high emission levels show that an engine tune-up can substantially reduce pollutants. By more than 50% on the average.

So there is something that you can do to fight pollution. Have your car’s exhaust emissions checked. If your car needs a tune-up, get one. At least once each year or every 10,000 miles. And urge your friends and neighbors to do the same.

Further information is in the free factbook, WHAT YOU CAN DO ABOUT YOUR CAR’S EXHAUST POLLUTION.

Driver Neglect

Key Tune-Up Items Ignored By Motorists

Despite California’s deep concern with the air pollution problem, motorists in that state are neglecting vital anti-pollution maintenance.

According to tests at the California state Automobile Association’s diagnostic clinics, seven out of ten cars have deficiencies that could be corrected by a simple tune-up, which can save millions of dollars annually, improve engine efficiency and air quality.

One reason is that motorists commonly neglect safety-oriented equipment. In six out of ten cars, headlights were improperly aimed. One third of the cars had either imbalanced or misaligned wheels, worn brake linings or unsafe tires.

CSAA advises a yearly tune-up to help keep fuel economy high and to provide better starting, easy starting, safe driving and better performance.

A new feature of the California state Automobile Association’s diagnostic center is a computer-aided diagnostic equipment, provided by Chrysler Manufacturing Company. The center also allows motorists to read the emissions that would have been tested.

Driver Neglect

Key Tune-Up Items Ignored By Motorists

Despite California's deep concern with the air pollution problem, motorists in that state are neglecting vital anti-pollution maintenance. According to tests at the California State Automobile Association's diagnostic centers, seven out of ten cars have deficiencies that could be corrected by a simple tune-up. These deficiencies, which can cause excessive harmful emissions, are improper engine timing and idle speed setting. Other common ignition system malfunctions, each contributing to dirty emissions, include: burned or badly pitted points (58 percent); worn spark plugs (50 percent); maladjusted carburetor (50 percent).

CSAA advised a yearly tune-up to help keep harmful emissions low and to provide better starting, good gasoline mileage and better performance.

**IN THE NEWS**

**No luck**

Delbert P. Zygler complained to The Daily Iowan Thursday that, because of the latest Indochina crisis, presidential assistant Henry A. Kissinger is postponing a planned trip to Japan. Zygler, who was to have left for Japan Saturday, will delay his journey "until probably the first part of May."

**Postponed**

WASHINGTON (AP) - The White House announced Tuesday night that, because of the latest Indochina crisis, presidential assistant Henry A. Kissinger is postponing a planned trip to Japan.

Kissinger, who was to have left for Japan Saturday, will delay his journey "until probably the first part of May."

**Oatmealng**

Students involved in "Operation Oatmeal," the broadcast giveaway, have scheduled a meeting Friday with university officials to discuss the university's response to the program.

A spokesman for the university said they were going to talk with Gerald E. Burke, assistant director of residence buildings. He described the program as "being charged" for each broadcast given away.

The broadcast giveaway is part of the program wide open to all welfare colleges, even those the students themselves, and they gave away only the food they normally sold.

Tens of students received broadcast Tuesday at Corner and Highnam dormitories, and the University of Iowa radio station and a picture in City Park featured headline:

**Okayed**

The city of Coralville agreed Tuesday night to join the new interagency Emergency Operations board.

The board, which would direct law enforcement on the University of Iowa campus in times of civil disturbances or natural disaster, has already been approved by the university and the city of Iowa City.

The adjourned and the state Department of Public Safety will also be represented on the emergency board.

**Inflaters**

WASHINGTON (AP) - Preliminary government studies indicate more than 60% of the nation's hospitals are inflating their profit margins and taking price cuts, according to a report released Tuesday.

The report, by the General Accounting Office and the President's Commission on the Cost of Living, indicated that the average profit margin for non-teaching hospitals is 5.8% of total revenue, while the average profit margin for teaching hospitals is 6.8%.

**Optimism**

WASHINGTON (AP) - With reports of new allied successes including the destruction of U.S. B-52 bombers on an enemy tank battle by winger LT. Col. Jonathan T. 89-18 Thursday, President Nixon urged his fellow citizens to maintain their optimism about the progress of the war.

"We must not despair," Nixon said. "We must not lose heart."

The president spoke before the American military commanders in Europe, expressing his confidence in their ability to carry out the mission of the United States in the conflict in Indochina.

The key vote was the 99-59 Senate defeat of the White House's $85.7 billion budget bill for fiscal 1975-76, which would have funded the war in Vietnam.

The decision, which will allow Vietnam to come to a 367 vote decision on the bill, is expected to be made by the Senate.
