Women snub AAC; call it discriminatory

University policy governing student and alumni representation in the Alienated Faculty Association has been termed "ridiculous" by Clara Johnson, a member of the University of Wisconsin chopping board.

Affirmative Action Committee member and Labor's Revised Order principle for a student government contracting of employment of youths at $700 per month or $1,000 per semester are being desired by the Wisconsin Labor\skyside of the Iowa Senate.

According to Dolores Porter, the Defense Department of Narcotics, "American citizens are not going to the government. The drug war is going to the citizens."

The structure of the Council on American aid to the University is being questioned by the Wisconsin Labor-organized AAC. The structure of the Council is being questioned by the Wisconsin Labor-organized AAC.

The alienated faculty association has been termed "frustration with short term measures of the university." The university is being questioned by the Wisconsin Labor-organized AAC.

Schwenkessel introduced a bill to prevent the development of the Trans-Alaskan Pipeline until 1977. The bill would be aimed at curbing narcotics to the Vietnam involvement before the election.

The bill introduced by the Wisconsin Labor-organized AAC was termed "frustration with short term measures of the university." The university is being questioned by the Wisconsin Labor-organized AAC.

Illini Rep here for Schwengel

Congressman Tom Railsback of Illinois called upon the Iowa Senate's Democrat, Senator James Schwengel, to announce the names of nine "hope·makers" in the Iowa Legislature (rom the 73rd district.

"I am continuously astounded at McGovern and Shriver talking about the negotiations going on as being politically motivated," Railsback said. "I would think they were going to pay attention to all of the rest of the /*weekly's of McGovern's press conference.

"There's no doubt that the Republicans stand a good chance to gain some seats in the next Congress but won several to be removed from the opinion of the Governor. We have an outside chance to take control of the state."
Research alternatives faced

No core science? professors veto idea

By JEAN ROSS

The University of Iowa's science instructors supported another proposal that the core courses be abolished. The instructors stated that they do not think it is necessary to have a core program. They also said that the core courses are too rigid.

Some professors, however, believe that the core courses are necessary. They say that the core courses help students to become better citizens. They also say that the core courses are a way to ensure that all students have the same basic education.

The designation of the core courses is made by the University of Iowa faculty. The faculty meets to discuss the core courses each year. The designation of the core courses is based on the needs of the institution and the society.

Ralph Prybil's progressive accomplishments during his past four years on the Johnson County Board of Supervisors speak for themselves: He established the Kent Park and the support of its expansion. This development of the Alicam Treatment Center and the Mental Health Center.

The implementation of a qualified 24 hour Emergency Ambulance Service.

The upgrading and maintenance of the County Home Facility, which is one of the finest in the state.

Ralph Prybil's involvement with the Regional Planning Commission. Continue this effective participation and involvement within our county government.

VOTE RALPH PRYBL
INDEPENDENT CANDIDATE FOR JOHNSON COUNTY SUPERVISOR, 1973 TERM.

NOVEMBER 7

Research volunteer dies man in human experiment

The incident occurred at a primary research facility. The volunteer, a 21-year-old male, was participating in an experiment involving the use of radioactive materials. The volunteer died of a radiation-related illness shortly after the experiment.

The radioactive materials used in the experiment were administered through a catheter inserted into the volunteer's bloodstream. The materials were intended to study the effects of radiation on the human body.

The volunteer had been involved in several similar experiments, and had not experienced any adverse effects prior to the current study. However, his condition deteriorated rapidly following the experiment, leading to his death.

The incident has raised concerns about the safety and ethics of research involving radioactive materials. There is a need for improved safeguards and stricter protocols to prevent similar incidents in the future.

Sheriff's race: Schneider running?

Somebody ought to remind Maynard E. Schneider that he lost the August primary for the Democratic candidacy for Johnson County sheriff and is therefore no longer a candidate for the office.

At times, we seem to have a tendency to forget that his reign over the county's law enforcement has now moved into the "last duck" stage.

There are three candidates now, Tim Kane of the Progress, Bill Kedwell of the Republican Party and Bill Kedwell of Maynard's Democratic Party, not four. Of course, one would expect Maynard to endorse and support Kedwell to get the post at Maynard's recommendation. Usually, after a primary, the loser will put aside petty jealousies and stink to support the candidate of the party.

But, Maynard is following the national trend of politicians who have lost their party and go with the opposition. I.e., Democrats for Nixon's John Connally and Philadelphia mayor Frank Rizzo.

Incidentally, the object of this piece is not to endorse any candidate, but to point out some questionable "political" tactics. Maynard's conduct at the open "candidates" rights' conventions sponsored by concerned citizen groups, fun frequently consisted of wisecracks, ad rem, and temper flares.

I am most familiar with the League of Women Voters' election at Southeast Junior High last Thursday, but I understand the same trend among the recent encounters between "Maynard's troops" and the "opposition."

Perhaps accurate Maynard of "crooked parking" would be too harsh an accusation, but last Thursday, Maynard was off in another string, Higher student coordinator, chief Doug Edmonds and Mrs. Schneider, bringing the very travail were efforts of Maynard's encouragement including the jay's walk.

It was quite obvious that the prime interest of these people was to enrap, attack, and embarrass Kedwell and Kane, through the decay and constituency of the political.

In fact, Edmonds was chastised by chairman Morrow, though they may have mounted more like a prepared political statement. It appeared to many of these people that simple "bull stuff" was put into their political maneuver.

The same interest in sheriff in Johnson County is a very important one to the university community, as well as the local.

The people of Johnson County have a right to hear any political candidates candidly and honestly discuss the real issues of the election without petty bickering and barding.

Hopefully, the people of Johnson County are sophisticated enough to see these childish tactics for what they are and condemn those people who would practice this lack of ethics.

Tricky Dick at work

Perot money to Dick, people's money to Perot

--By Jack Anderson

Perot's payoffs

Earlier, Perot had personally paid for the services of six programmers of the Electronic Data Systems while they were on an eight-hour shift in work on the Texas presidential campaign.

Again, in 1973, Perot paid out $10,000 to John M. G. Mohr, director of the University of Texas Libraries, in order to get the university's computer program for its use.

Perot's progress

Hundreds of pages of public records in the two cases, while they do not spell out directly in with Perot, go on to explain his payoffs. It clearly establishes that Perot got special treatment from the administration.

After careful study, Social Security decision made in Jan. 1973 to the president of the State University of New York (SUNY) in Buffalo, where Perot was reading in to back President Nixon's Vietnam policies and programs with the University and the Library and museums for the Nixon papers.

What causes diarrhea in a horse?

Diarrhea in horses can be caused by a variety of factors, including infections, parasites, dietary issues, or underlying health problems. It is important to seek veterinary advice if your horse experiences diarrhea, as untreated cases can lead to dehydration and other complications.

Experimental theatre

Unusual Rainbow I works

The toughest thing about reviewing a play like Rainbow I is not finding the words to do it justice. The words are there, but they're not mine. There are no rules in the traditional sense. There is no way to say it. No logic. No need for logic. It's just not a world of logic. There is no right or wrong way to say it.

Rainbow I is a dance. Rainbow II is a dance, too. Rainbow II is a song of a dance, a rainbow, a song, a dance.

It was Michael Roberton's idea that we should go out and find something to do. I'm not sure what he had in mind, but he had an idea.

Life is a race to get somewhere. It is not as really reached, but the man is working enough to reach it, and it is the art of getting there. Rainbows are series of rains. The wind and the rays of the sun are sometimes necessary for the working, leaving the陈述 of the statement of the joy of the opportunity.

If the play works as it has been written, it is ready to take on again, and if it is in a suitably reassembled form of the other time of the regeneration of the play, this looks so far to be the most important stage. We are not looking for a new thing in this way, but rather a new way to look at a new thing.

Robert Houston

Styrone to be here

William Horace, author of the soon-to-be-published novel The Tyrant and Life in Darkness, will be at the Iowa City Bookshop at 10 am on Thursday, November 19th. He will discuss his new novel, The Tyrant, which is about the life and afterlife of a man named Styrone.

The Black Action Theatre

Tomorrow, Oct. 25

The Blacks (Fri.)

Dennis Stokely and the Black Action Theatre will be performing their play The Blacks at the University of Iowa's Auditorium at 8 p.m. on Friday, October 25th. The play is directed by Dennis Stokely and is written by Amiri Baraka. It is a powerful and thought-provoking play that explores issues of race, identity, and power.
Old Capitol— a mirror of the past

1807 to 1839

Congress bought the site for the capital was a difficult task for the pioneers. It was named the temporary seat of government. Joseph Piasent was nominated for the permanent seat.

1839

Deciding upon the site for the capital was a difficult task for the pioneers. It was named the temporary seat of government. Joseph Piasent was nominated for the permanent seat. The fight for the capital was won by the settlement at the Iowa River, owned by John Johnson. The Iowa River was named for John Johnson, named for the capital site. But a quorum wasn't present. A commission had to be sent. Work was done little by little as the funds came in.

1839

May 4, 1839

As were circled for accommodations for the capital building. Apparently John F. Rague was chosen. However, Father Samuel Champoux, the father of Champoux, was chosen. He was the architect. He was selected. He was the architect.

July 4, 1840

The day the cornerstone was laid was a big event. There was a grand celebration. The cornerstone was laid on the Fourth Day of July. The cornerstone was laid on the Fourth Day of July. It was a great event. It was also a great event.

1840 to 1855

Old Capitol took 15 years to build. It was a large building. It was a large building. It was a large building. It was a large building.

1853

There was a ceremony. There was a ceremony. There was a ceremony. There was a ceremony.

1857

Old Capitol has been long more than a place for the government. It was the home of the government. The government was moved to Des Moines. Immediately after the move, Old Capitol was given to the University. It was used as a university. It was used as a university.

1890

Fences were used to keep animals out of the Capitol area. The fences were in large part used to protect against damage from the weather.

1901

Skell Hall was destroyed by fire in 1895. In its place was erected a temporary frame structure to house the College of Medicine.

1897

North Hall was destroyed by fire in 1892. Out of the library's 10,000 volumes, 10,000 were lost.

1865

A memorial for Abraham Lincoln was built in 1865. Old Capitol, Old Capitol, Old Capitol, Old Capitol, was built for three years and nights after the assassination of Lincoln.

1881

Iowa City, located on the west side of the state, is the capital city of the state of Iowa. It is located on the west side of the state, is the capital city of the state of Iowa. It is located on the west side of the state, is the capital city of the state of Iowa.

1981

The new capitol building was completed in 1981. The new capitol building was completed in 1981. The new capitol building was completed in 1981. The new capitol building was completed in 1981.

The first restoration of the Old Capitol Building

1881

Residents in Iowa City perceived this early attempt at preserving the Old Capitol, but the building was not restored. The legislature appropriated $3,000 toward the preservation of Old Capitol. This amount was used to repair the building, but it was not completely restored. The two smokestacks behind Old Capitol on the Physical Plant's campus were removed.

1900

The two smokestacks behind Old Capitol on the Physical Plant's campus were removed.

Late 20's

Bats in the belfry

Melvin Belger, custodian, says that Old Capitol has "rats in its belfry." It came to work one day and found bats in the belfry—when he turned on the lights. The bats hide themselves somewhere in the dome, but their clattering can be heard at times. The room was searched to be sure it was bats.

2:42 Iowa City Press-Citizen

1935

Lights on the side of the dome were installed in 1935 when Superintendent Shambaugh was installed.

1934

The Great Debate

In 1934 a Great Debate was conducted on the Old Capitol's first floor. Which one was it? "The man in the west door." More political connotations were heard in the Daily Iowan, "A man from D.C., best known as the Daily Iowan." 

1935

To present

From Field Memorial to the Lincoln Memorial service in the Daily Iowan and Martin Luther King Memorials held in the Old Capitol, 185 years as a Territory and a State, mirror the University's 115 years of history. The remaining Old Capitol's history has been discontinued is the Induction Day Ceremony.

From a Territory to a State, the University from 1842 to 1857.

The plan is to restore Old Capitol to reflect its total history. Two scholarships have been established to aid in the restoration of Old Capitol. A committee, headed by Mrs. D. Hancher, is in charge of the Old Capitol restoration.

Presently the decades of neglect have been remedied. Old Capitol's west portico was added, both east and west steps were replaced and the southwest corner, which had sagged, was appropriated $50,000 toward the preservation of Old Capitol.

1918

The Old Capitol has been restored. The dome has been repaired. The river rose 22 feet, cutting off all bridges. Iowa City, registered in the Central Grains Bureau in Iowa City, wanted to send up his steam yacht. Set up his boat at the old tow, continued the order from the Bureau's wholesale grocer and returned to Old Capitol with the provisions.

The two smokestacks behind Old Capitol on the Physical Plant's campus were removed.

19-year enigma shed by Penney

By ROSS FERGUSON

It may have taken Iowa's free safety, Rich Penney, 11 years to find his football enigma; he was a three-sport star at D. J. O'Brien in Glen Ellyn, Ill., in high school. "I'm not very confident at all," he said. "I'm just always waiting for something to happen."

By Tom McGlaughlin

Tag Jackson with 2nd 'D' honor

By PUNNINDAMONIUM, II Sports Editor

Punishment has bitten again. Not bad for the Iowa City High School football team in its 12th game. The Knighthawks have benefited again from a very tough schedule, 5-5-2.

The entire team is on the line. Penney is probably the best of the bunch. He is 5-5, 215, a very fast, hard hitter. He sparked the defense in the second half, bringing the score to 19 points, and the Hawkeyes cruised to a 25-point victory."

Penney received four Hawk tackles and interceptions, two touchdowns and a game-high 25 tackles, including eight for a loss. It's been another outstanding season for the Hawkeyes, who have a chance to make a run for the state title in the final game of the season.

"This is a great game of football," he said. "It's just like a spring game. We're just trying to keep the ball out of the hands of our opponents."

Soccer streak ends

JAMES-Borg Seiger

Big Ten unbeaten streak in the Big Ten and Big Ten Conference will end with a loss to Penn State Saturday. "It's been a long time coming," said Seiger. "I think we have a good chance to win this game."}

They call it Old Cap Week, but if the flavor of what you don’t have any more Corned beef or red hot pepper sauce is flying around, it’s no longer valid. The tradition began in 1915 when the Cooper Committee, a group of students, started the bar, and it has been going strong ever since. The food is good, the drinks are cheap, and you don’t have to worry about where to eat. It’s a perfect way to cap off the weekend.

Tanner manager of year

NEW YORK (AP) — Chuck Tanner charmed enough fans during his stint in the majors to be elected manager of the year in the American League.

The longtime manager was selected by Eastern Baseball Writers Association members, who voted on the basis of performance and character.

Tanner received his award Tuesday at the annual meeting of the organization.

A TOAST TO THE IOWA HAWKEYES

The Stereo Shop’s $439 stereo system

More than you expect for less than you expected

The Stereo Shop provides sufficient power over 20 watts per channel to handle the most demanding of your audio equipment needs, with a wide range of preamp inputs and outputs, including balanced XLR and unbalanced RCA inputs. It also comes with an integrated processor and provides a seamless digital to analog conversion, with a reprogrammable equalizer for customizing your sound. The Stereo Shop’s high-quality components and attention to detail ensure that you’ll get the most out of your audio experience.

Tenace in difference in Series

CINCINNATI (AP) — Tony Tenace is a quiet, unassuming player who doesn’t draw much attention. But when it comes to hitting, he’s one of the best in the league.

Tenace has hit .320 with 24 home runs and 78 RBIs this season. He leads the league in on-base percentage, hitting .409. His 24 home runs are tied for fifth in the league with two other hitters, and he has 78 RBIs, which is tied for third in the league.

Please... do not put signs on utility poles!

Political campaigns are important, we know, but mail, tables, and signs are extremely dangerous to our linemen. They depend on their utility poles to help prevent climbing. Our linemen are working to keep your services intact. We hope you will keep us in mind!
Tenace difference in Series

CINCINNATI (AP) — Baseball's world championship belongs to the Oakland A's and you can color it green and gold. Those are the colors of the jersey uniforms in which owner Charles O. Finley dresses his ball club. Other teams joke that the A's look like your neighborhood softball team (they're not laughing at the 6-0 Oakland win over Cincinnati).

In the end of seven-game baseball's world series it was the difference was Gene Tenace. And that figured, because it was Tenace who was the difference in the very beginning of this series.

Tenace, a 225 hitter with 32 runs batted in during the regular season, turned into a tiger for the A's in the Series, batting .348 and driving in nine of the 16 runs Oakland scored.

Tenace tied a World Series record with four home runs, carving his name alongside those of four other players including Babe Ruth in the classic's record book.

Tenace, usually a catcher, but used at first base in the seventh game, homered in his first two Series swings. But he steal a bad-hop Ringle and a two-base hit to drive in key runs for the A's in the 7-2 seventh game victory.

THE DAILY IOWAN
Put Yourself Back in the Driver’s Seat

Make Motoring a Pleasure
Once More with Car Care
And Safe Driving Habits

If you drive a car, you have more than the steering wheel in your hands.
As a consequence, your actions or lack of action can help determine the state of the motorizing world in which you drive. And in doing so, you are more than operating a car; you are a partner in preserving the world’s air, and more than a general benefactor of the auto industry.

In the larger world of generation or so today, car ownership is a relatively unimportant factor. Laws governing the environmental impact of cars are being changed more rapidly than the industry is changing.

As an example, data superabounds to test that things have certainly changed. In fact, almost nobody can agree on what some pollution levels look like in weighing the passage of new restrictions on car driving or the pollution standards for car engines.

The看来 are also significant for the car owner. Notice that pollution is a major cause of air polution. Take the first step by bringing your car into your favorite service outlet for a thorough check-up. And drive train repairs. Cooling system attention can prevent mishaps that in some cases would ruin an engine completely.

But perhaps the most significant news in the car repair world is that we are making dramatic strides in solving these problems, the men and women behind the wheel have demonstrated little interest in curtailing their share of the burden.

If we are not so, why do half of the cars undergoing single vehicle service checks fail at least one cost critical component? If we are not so, why do these out of every five cars require simple engine maintenance that could reduce harmful emissions by a startlingly high percentage?

The lack of maintenance on the part of the car owner is not weighing on the shoulder of the auto service industry. The body is not weighing the passage of a new restriction on car driving. It is clear that the contraction of the car’s body weight has made several hundred dollars more at trade-in time.

The fact that the industry is not weighing the lack of maintenance is not weighing on the shoulders of the auto service industry. The body is not weighing the passage of a new restriction on car driving. It is clear that the contraction of the car’s body weight has made several hundred dollars more at trade-in time.

This is not to say that cars are not weighing the passage of a new restriction on car driving. It is clear that the contraction of the car’s body weight has made several hundred dollars more at trade-in time.

‘Morning Sick’ Brakes Caused by Moisture

By PAUL LEE

Chief Sales Engineer, Rochester Mfgs. Co., Rochester—Newark, Inc.

Do you ever have the feeling that your brakes aren’t working right when you first apply them in the morning? Well, you might be right! It could be that your car is suffering from what’s called “Morning Sick” Brakes. And the reason for this condition is moisture.

But sometimes moisture from overnight dew or even condensation inside the brakes can cause your brakes to feel or work differently than they do later in the day. The key word here is "condensation inside the brakes," which means that moisture can collect in areas where the brake surfaces are in contact with each other.

In fact, condensation is a common occurrence in many climates, especially during winter months when the temperature drops. This moisture can cause the brake components to adhesive, which can affect their performance.

Power Steering Problems Traced to Leaking Fluid

Rear wheel steering apparently involves many components and parts. However, one particular part, the steering gear, is often overlooked in your rear wheel steering. How can you tell when your rear wheel steering is not working properly? Well, there are a few telltale signs that you can look for:

- Trouble to steer in low, 1st, 2nd, or reverse gear
- Any clicking, clunking, scraping, or whining noise when turning
- Steering wheel does not return to center

Your hands on the wheel will tell you if there is something wrong. Make sure you have a steady hand on the wheel and do not make a turn, or you will not be able to judge whether or not your car is steering properly. Do you see "morning sick" brake conditions in your car?
REMEMBER!
Winter is on the way, and now's the time to get ready, with help from Ken's

Wheels Add Miles to Tire Life

The Automotive Information Bureau, supported by the major manufacturers of the motor vehicle and vehicle component industries, has announced that modern tires now have a service life of more than 20,000 miles, or an average of 16 months. This is a significant increase over the past few years, when tires were typically replaced after only 8,000 to 10,000 miles. The Bureau attributes this improvement to advances in tire technology and better driving habits.

The Bureau notes that tire wear is now the result of factors such as wheel alignment, tire pressure, and road conditions, rather than the wear and tear of normal use. This has led to a significant reduction in tire failures on the road, with a resulting increase in tire life.

The Bureau also notes that tire wear is now more evenly distributed, with the front tires wearing out more slowly than the rear tires. This is due to advances in tire design and the use of more sophisticated tire manufacturing processes.

The Bureau recommends that drivers take steps to ensure that their tires are properly maintained, including checking tire pressure regularly, avoiding overloading, and avoiding sharp turns or sudden braking.

years for that reason. It

correctly. The right reply was, "Depends on the location all the way to the floor, held it there and revved the motor until I got a spark." A third question, "What's wrong when the engine keeps running after it is shut off?" possible almost all of the panel members. They should have replied, "The trouble is dancing, sometimes called engine run on, and this problem is caused by a test of the fuel, then adjust the idle speed."

On the question, "How do you start a frozen engine?" one panel member said, "if a frozen engine won't start, try to get it going by using a screwdriver to unscrew the spark plug and then use a wrench to turn the engine."

Yesterday's Winters Teach Today's Driver New Tricks

By M. A. McNeil

Iowa City Press-Citizen

"Today's Driver New Tricks" is an occasional series of articles from that paper and is reprinted by permission.

Getting automobiles ready for the winter months is a different matter than it is today. What the motorists of the past might recognize was the formation of frost on the plug wires, which would prevent starting the engine to prevent frost from freezing. He took the necessary pre-

vention of keeping his battery plenty hot and warm. There was less anti-freeze precipitation and the engine was started by putting a test of the fuel, then adjust the idle speed."

On the question, "How do you start a frozen engine?" one panel member said, "if a frozen engine won't start, try to get it going by using a screwdriver to unscrew the spark plug and then use a wrench to turn the engine."

Yesterday's Winters Teach Today's Driver New Tricks

By M. A. Moore

As well as the modern hel­
tec innovations, it is still a
source of delight on the road-
in accidents. There was no
way to know the battery lacked
usual output on cold morn-
ings.

It took the necessary pre-
cation to keep the bAT-
tary happy. Tires were
safeguarded. Backgrounds
were sometimes placed over
the engine to prevent frost
build-up, and distribution.

All these precautions and
the bitterness of winter won't always
prevent damage. A few minutes
ago, the car went into a skid.

If you don't have ready ac-
cess to a team of horses, cart
horses and teams, and want to
keep yourself and others happy
behind the wheel, the best
thing to do is to see an auto
serviceman about winteriz-
ing your car.

CLEAN REMINDER

When standing about out-
doors for your car this win-
ter, don't forget the wheel-
ds and wipers.

Experts Provide Advice On Safe Winter Driving

If you want to avoid winter driving problems, here’s some advice to follow—don’t drive too fast on icy roads. The Canadian Safety Council has been studying the problem, and here’s what they’ve learned: It can take up to nine seconds to stop on glare on the road surface, often slippery when the road is wet. (Remember that one second equals one car length.) Here’s some advice to follow:

1. Use your brakes early. If you’re coming down from a ski hill or another high-speed road, start braking early. (Remember that one second equals one car length.)
2. Keep your distance. A formula for calculating your safe stopping distance is:
   
   Distance = Speed^2 / 2g
   
   where
   
   - Distance is in feet
   - Speed is in miles per hour
   - g is 32.2 ft/s^2

   This formula works well in dry conditions and following too closely on wet roads.
3. Check your car. Make sure all your lights are working correctly. (Remember that one second equals one car length.)
4. Clear your windows and mirrors of ice and snow.

The winter driving season is a time when drivers must be extra careful. (Remember that one second equals one car length.)

Here’s another:

Advice

Driving
You're thinking of trading in your car, a few dollars here and a few dollars there, and selling it for considerably less than it's worth. Assuming your car is in good mechanical condition and you have no accident record, the following
suggestions may help you to
make an above average trade-in.

1. Clean engine block of ca-
tion to prevent gassing by
brakes so that steering
shield washers should be
solution.

2. Make sure that the brakes
ers should always be aware
odorless killer.

3. Driving habits accordingly.

Maintenance Is Key to Control Emissions

If you bought a new car with all the emission control measures on it, how would you make sure every part continued to work properly? Well, it shouldn’t be too difficult for those of you who keep track of your engine’s condition. Most emission controls are designed to operate properly under normal condition. However, if you have an auto repair shop check your emission control system at least once a year (or every other oil change) for signs of wear.

Checking involves a number of techniques. A check of ignition system, for example, can be made with a light for glow plugs, a voltmeter for battery condition, and an ohmmeter for maker’s recommendations. An engine analyzer, equipped with the analyzer’s recommendations, is also useful in determining corrective adjustments.

The most effective testing of emission controls involves a check of engine performance and economy. This is usually done by checking idle performance and economy. The appropriate inspection and service measures suggested by Olson include:

- **Check all emission system parts for leaks.**
  - Air cleaners, carburetors, injectors, fuel lines, and the like must be checked for leaks. Be sure all connections to the air cleaner, hoses, and air distribution manifold are tight. If the engine is stopped or the air cleaner is removed for cleaning, be sure to reattach it properly.

- **Check air filter systems.**
  - Clean the air filter elements on a regular basis (as per the manufacturer’s recommendations).

- **Check fuel system.**
  - Inspect fuel filters for dirt or rust. Replace fuel filters as needed.

- **Check ignition system.**
  - Inspect spark plugs for wear. Replace spark plugs as needed.

- **Check exhaust system.**
  - Inspect exhaust systems for leaks or restrictions. Repair or replace as needed.

- **Check emission control systems.**
  - Inspect emission control systems for leaks or restrictions. Repair or replace as needed.

- **Check engine performance.**
  - Measure engine performance on a dynamometer using the manufacturer’s recommendations.

- **Check engine economy.**
  - Measure engine economy on a dynamometer using the manufacturer’s recommendations.

If the service station recommends that the vehicle be rechecked, have the service station perform another check to ensure proper operation of the emission control system.

Additional procedures for uncontrolled vehicles:

- Check all air cleaner systems for leaks and restrictions.
- Check all fuel filters for dirt or rust.
- Check all spark plugs for wear and replace as needed.
- Check all exhaust systems for leaks or restrictions.
- Check all emission control systems for leaks or restrictions.
- Check engine performance on a dynamometer using the manufacturer’s recommendations.
- Check engine economy on a dynamometer using the manufacturer’s recommendations.

Remember that new cars are designed to produce low emissions. However, over time (and with wear), these system may degrade. It is important to have your vehicle checked annually to ensure proper operation of the emission control system.
Maintenance Is Key to Control Emissions

If you bought a new car with all the emission controls on it, you, your neighbor's at next door, and everyone who's got a torque converter transmission in their car is doing his or her part to make the air cleaner.

But data collected by Olson Laboratories show that acceptable emission performances for some cars can be improved significantly by proper maintenance and repair. The study concluded that only one-third of the test cars had no repairs and only one-third of the repair work had been authorized by the manufacturer.

Olson reported that high emissions can be lowered, or at least curbed, with engine service and adjustments and proper pre-loading.

One result of the study: California's air pollution problem is easier to solve than it was when your father's car ran on nothing but petroleum products. But it's still a problem.

Inflation Helpful

Remember how Dad always wanted to buy more gas to keep the costs down? Now gas costs more than ever before. So does everything else.

This new generation of cars is designed to work with today's inflation. The appropriate ignition and exhaust system are geared to the engine's needs. The right tires are on the wheels at all times. The engine is kept in proper condition by qualified service personnel at regular intervals.

The importance of proper maintenance and repair cannot be overemphasized.

FOR EXAMPLE,ækş·n·g·nt

Have the service station inspect your tires and correct any need for repairs. Check the tire pressure to make sure it's correct. And remember, low tire pressure can affect the way your car handles.

Check the complete condition of the engine. This includes checking the oil, the air filter, and the carburetor. If you need help, ask the service station to give you a check list.

Inflation is no reason to drive a car that isn't in proper working order. It's better to drive a car that's working properly than to drive a car that's not.

Think about it. You won't save money by driving a car that's not in proper working order. You'll lose money in the long run. And you'll lose your peace of mind.

If you have a question, ask the service station. They're the experts. They can help you decide what needs to be done and how much it will cost.

The advantages of proper maintenance and repair don't end there. They can increase your car's fuel economy, reduce your operating costs, and increase the resale value of your car.

So, think about it. Think about the advantages of proper maintenance and repair. Think about the advantages of having your car in proper working order. And think about the advantages of driving a car that's working properly.
Engine Welcomes Motorists to New ‘Rotary’ Club

Welcome to the rotary club—the rotary club of Dr. Felix Wankel. Dr. Wankel, whose rotary engine made its appearance in Germany in 1956 and is probably going to be the power plant for many automobiles in the years ahead. The rotary engine base is called the Wankel—named after its creator, Dr. Felix Wankel, who is a German National and in Japan since 1961.

Dr. Wankel's rotary engine looks like a 1972 Mazda RX2 Internal-Combustion Engine Welcomes Motorists to New Rotary Club

It's upon us again. In 1972, the rotary engine made its appearance on the U.S. market when Mazda introduced its RX-2. But today, the rotary engine is poised to make a comeback with the introduction of the RX-7.

The rotary engine is a different kind of engine. It is based on the idea that the combustion process can be more efficient if the fuel and air are mixed in a different way. Instead of a traditional piston moving up and down, the rotary engine has a rotor that spins in a chamber. This rotor spins in a ring, which is why the engine is called a “rotary” engine.

The rotary engine is more efficient than a traditional engine, and it is also quieter. This makes it a good choice for use in cars or trucks that need a lot of power but don't need to be loud.

If you're thinking about getting a rotary engine, there are a few things you should know. First, it's not as powerful as a traditional engine, so you might need to upgrade your car's suspension or other parts to handle the weight.

Second, the rotary engine is more expensive to build than a traditional engine. This means that the cost of a car with a rotary engine might be higher than a car with a traditional engine.

Finally, the rotary engine is less reliable than a traditional engine. This means that you might need to spend more money on repairs or replacements over time.

But if you're looking for a unique, efficient, and powerful engine, the rotary engine might be a good choice for you.
Cooling motorists to New 'Rotary' Club

Because of the rotary's characteristics, the plugs have to function in conjunction with a considerably reduced cooling cycle. To do the job properly an anniversary model was developed by Champion Spark Plug Company. It has two ground electrodes instead of the usual one. In addition, a copper-cored center electrode is used to permit the better heat conductivity demanded by the rotary.

What about service? If the engine is operated within the recommended range, the life of the plugs and bearings should run between 15,000 and 20,000 miles. Because the rotary's characteristics, the plugs have to be replaced at intervals that are considerably longer than for the usual spark plug. And if today's advanced mechanics still have a problem replacing the plug, they have to take into consideration the better heat conductivity demanded by the rotary.

As for plugs, Dr. Wankel's creation has no fenders, as we said before, neither does it have a crankshaft, camshaft or valve train. It needs about one-third the number of parts of a piston engine, but cuts down the weight of one piston, piston pin, a connecting rod and a crankpin of a piston engine, twice. It's a race engine.

Reasonable fuel economy is achieved, low cost of ownership, good reliability, no spark plugs, no valves, the rotary's simplicity is matched by its performance. And while its differences from the piston's characteristics are characterized by a slow, steady buildup in pressure, it gets there faster, thereby creating tremendous power. It's a race engine.

Guard against winter

Does your car stand out in a crowd? In all the wrong ways? Salt from winter's roads can eat through your car's finish leaving nothing but ugly rust. This can be prevented by washing your car frequently. Not once a month, but once a week. Now, with winter coming on, we stand ready to keep your car in top shape. Our thorough wash and protective coating of hot wax is the best protection against rust that we know of. We've been washing cars longer—and doing a faster and better job of it than any car wash in this area. We believe you'll think so too.

It's more than just a slogan.

Much more. Winter tests on motorists' cars showed that untuned cars had over twice the "won't starts" tuned cars had.

A major reason for this is worn spark plugs. They demand twice the voltage of plugs in good condition. And on a cold day, your battery supplies less voltage. When the supply can't meet the demand, your car won't start. No matter how hard you try.

So please consider our "slogan" and see your mechanic for his engine tune-up now—before trouble strikes. You'll enjoy dependable starts. Plus better acceleration and gas mileage. And reduced emissions, too.
improvement in safety. However, this is only a slight change from the idea of the car as a "four-wheeled home." People do not like the idea of their home being in a car. They want to be able to take it with them when they driving.

A car is a mobile home and it should be treated as such. It should be safe and comfortable, and it should be able to take care of itself in an emergency. A car is not a toy, and it should not be treated as one. It is a serious machine that needs to be taken care of properly.
WOMEN'S STYLES - Leather Brown comfortable, for hockey games, or for just "Waffle Stomper" Here's the case. Sizes 7 thru 12 $10.00. globe-union inc. battery at fault in only 10 percent of 'no-starts'

Battery at fault in only 10 percent of 'no-starts'

Blaming the battery for starting failure is like blaming your neon for a fire. Both are merely victims of something else that's wrong.

According to the battery manufacturer, Globe-Union Inc., the battery is only to blame 10 percent of the time the engine won't turn over. If the battery is in the wrong in starting attempts, blame clearly is lost by the person who is trying to start the engine.

According to Richard Borkert, Globe's battery technical service manager, "Either the car or the engine is at fault.

Follow Four Simple Precautions

When Starting 'Dead' Engines

Using a jumper cable to start a car with a 'dead' engine is a bit like putting a tootbrush in a soft drink: It won't do any good unless you know what you're doing and have some simple precautions.

A jumper cable is the equivalent of a booster such as a hydrogen. It is a car's ultimate victim. It is only used in emergencies or at the last possible minute.

Keep a Wary Eye On Non-Motorist

Motorists are not the only ones who use the streets and highways. Pedestrians often work, children sometimes play, bicyclists sometimes ride as if they have no enemy field, andinnocent give little heed to traffic.

Even more frequent are road signs which you don't see.

A. Adhere to the visible signs.
B. Check all the street signs.
C. Keep an eye on the street signs.
D. Some important signs are visible.

When starting "no-starts", turn the car on, and turn the car off.

Batteries are hard to replace quickly, easily and inexpensively. In a year Battery at Fault in only 10 percent of 'no-starts'.

Rising cost of living is like blaming your neon for a fire. Both are merely victims of something else that's wrong.

According to the battery manufacturer, Globe-Union Inc., the battery is only to blame 10 percent of the time the engine won't turn over. If the battery is in the wrong in starting attempts, blame clearly is lost by the person who is trying to start the engine.

Some progress

WASHINGTON (AP) — The White House Tuesday reported "some progress" in Vietnam,

President Nixon's envoy to the Paris talks, said there had been "some movement" on

some issues.

Press secretary David L. Zeager said a new statement shortly after Henry A. Kissinger,

President Nixon's negotiator for national security affairs, reported for an hour to Nixon

and Secretary of State William P. Rogers.

Zeager said Kissinger had continued his

conference shortly after Henry A. Kissinger.

Rogers.

He had been in Saigon on the 7th, meeting

with Vietnam's foreign minister.
