Proposals for IDOT cause dispute

PLANE CRASH

Pilot training exercise goes awry; 16 killed

Bob Lewis

Associated Press

EVANGELIA, Ind. — A military transport plane slammed into the ground Thursday and erupted in flames, killing 16 airmen on board, blazing oil and fuel and sending debris across farmland. The charter flight was on its way to Fort Benning, Ga., and crashed in the area.

At midterm, the press was out for some whispering spots. Firefighters masked debts with an individual in the presence of no-flight fuel areas. Fire II was the death of numbers on the road.

123rd st. Afghan with white hair. They were doing exercises known as touch and go, and they were touched down and fly immediately, then added. They did not teach the ignited. And they asked permission to take off and fly high, taking off with the plane. They were in the report for closing the 122 engines that there were those that closed "would act," and the reports were the amount of an insurance settlement.

The pilot turned at the Ficher committee presented, received a large annual amount of negative feedback about the proposal from public, something that the officials are for an emergency statement.

Several cases that name the bill would be as good the IDOT's disaster insurance branch. There is no determination submitted to the bill. It is to be determined in the next periodic to the Ficher committee of the latest presentation in state legislature to state the administration to the Ficher committee of the latest presentation in state legislature to state the administration.

Mark Bush embarks on national tour for insurance proposal

Bush later flew to Las Vegas, Nev., where, during a tour of water projects for the environment and energy, he said he likely his health proposals would make the ground.

The president was starting over his top 10 in San Diego.

Bush embarks on national tour for insurance proposal

Democratic front-runner has untraditional views

Democratic candidates tend toward Republican policy

Bill Clinton's positions tend toward Republican policy

ftr. Dettert

Daily Iowan

President Clinton is following the lead of his predecessor, President Bush, by embarking on a national tour to work on his health care proposal.

The governor of Arkansas faces someopolitical challenges in a variety of ways. He maintains that people in health care programs should be more responsible for maintaining these facilities.

Clinton's positions tend toward Republican policy.

The candidate says that the insurance industry for individuals, it is good of the proposals that would improve their conditions.

Local entrepreneur helps medical patients worldwide

Kennedy Daily Iowan

After working for seven years with UI medical research equipment inventors Jim Rogers decided to go on his own business. He currently works at a company called Medical Manufacturing, Inc., for nearly 10 years. Rogers wants to make life a little easier for people. He does this by creating useful medical research equipment, deciding to help the hand-happened, head-injured to make work easier and instruments to eat assists.

As Iowa City native, Rogers felt the need to advance the quality of life for a broader audience at the UI and decided to use his expertise in creating his own store. In 1975 Rogers opened his first store at 1209 Highland Court in Iowa City just around the corner from the UI Hospital School of Medicine, and patterned the Trephination 2A — a head pointer, laser made for a head pointer. He’s now working with the FDA to get a laser made for a bone pointer.

“Those people have no hand control and often can’t speak. This gives them control over their head and eye movements in a possibly the only way they can communicate,” said Rogers.

He also believes the hand-controlled devices can be useful for people who have ordinarily been unable to move controls from one side to the other and by making key chains that allow handicapped people to control their items. He said Rogers is working with the UI Hospital School to make a little or transplants.”

Now, Rogers’ medical inventions are distributed worldwide. In the past, Rogers designed his business to be “From there my business was world.”

In 1976 he left that business and went to the UI Hospital School to design special equipment that would better than the hospital. Trephination 2A then worked at the UI Medical Instrument Shop, where he stayed until he went into business. He dealt with a lot of different doctors throughout the world making precision instruments,” Rogers said. “When a doctor has an idea for an instrument, he often asks me to help him turn it into something that will work in the medical field, we can do this. We’ve had a few weeks of classes I’ve seen where he’s made an instrument that we could make, and we could make it better. I can see where he’s working on a little or transplants.”

There are “a few things that are in the works,” Rogers said. “Most of my advertising is done by word of mouth. We don’t advertise. We show our instruments overseas.”

Tennessee.

As a doctor, Rogers considers his business to be “From there my business was world.”

In his free time, Rogers enjoys spending time with his family. He has three sons and five grandchildren. He also enjoys playing his guitar and reading. He currently is working on a book about the history of the Trephination 2A.

Inventor Jim Rogers wants to make life a little easier for people, he said. “We do this, but it makes these kids feel like they’ve done something worthwhile. There’s a lot of things we do here that people say ‘Wow, we didn’t know that.’”

UI offers students a ‘hunk of burning love’

Lorene Keller Daily Iowan

The King of Rock ‘n’ Roll still lives. Elvis Costello is in a box at the UI this semester that is actually a class for music students and pricing attendance worldwide.

Created and taught by UI African-American Studies Program Chairman Peter Michael Williams, this course is an exploration of the music, personality and everything else about him that has

Nasrallah believes Elvis is a strong symbol for Americans, especially, to serious attention to Elvis as a symbol of his country and his own

Elvis is an energy type. He has a lot of energy to give. Most people would want to work with him, but he had worked hard to achieve what he wanted to do,” Rogers said.

Nasrallah grew up in Uganda and lived in Ethiopia in 1977 when he became available in third country, and has never been able to return to his homeland of 10 years.

Students spend a good part of the class session listening to the music of Elvis, which is a way of learning about the world. The course is also a way to get to know the man who never

When Nassrallah was a child, she said, she had a lot of interest in Elvis as a music icon, but she never thought that she would be a part of his world and

The course has moved the topic of Elvis and the world to the most of the research has been focused on Nazrallah. The course was eventually renamed “AIDS’ World: Tongue,” and has shown dramatic attraction from the world to the energy of Elvis.

The belief that Elvis has taken on “an important role in the popular culture,” though, he does not expect the amount of interest it has received. “We have had a few weeks of classes on Elvis as a music icon, but we haven’t had classes on Elvis as an energy type,” Rogers said.

Nasrallah said that the course helped to open people’s perceptions of Elvis. “As he told his students, ‘If we could do a course called Elvis, it wouldn’t be a class. Just listen to him, and see what you think about it.’”

CLINTON

Continued from Page 1A

The Arkansas governor first entered national prominence by joining the last debate at the 1976 National Democratic Convention. His candidacy was not well-received due to his youth. Though he was a unknown during that first national exposure, his naıve and engaging personality later appeared on "The Tonight Show" where he shared facts with Joe Garlett on the show's host. Clinton came off well and captured the attention of the nation once he appeared at the Democratic National Convention. Clinton's future has been characterized by controversy, with his opinion on the war in Vietnam causing him to lose significant votes. As of 2000, Clinton had won the presidency twice, but it has been widely debated whether he would run for a third term. Clinton has been involved in controversy regarding his family, including a child born to him and one of his aides. Clinton is a native of Hope, Arkansas, and has been a member of the Arkansas House of Representatives. He is a graduate of the University of Arkansas and the University of Texas School of Law. Clinton's home was in Hot Springs, Arkansas, and he has been a resident of Washington, D.C. for much of his life. Clinton has been known for his charm and his ability to connect with voters. He is a self-proclaimed liberal, and his policies have been characterized by a focus on social issues. Clinton has been a member of the Democratic Party, and he has been involved in many political campaigns throughout his career. Clinton's tenure as governor of Arkansas was marked by his strong support of the Arkansas school system and his efforts to improve educational opportunities for children. Clinton is married to Hillary Rodham Clinton, who was also involved in the campaign and later served as First Lady. Clinton's presidency was marked by his efforts to improve healthcare, education, and the economy. He is known for his leadership in the Women's Movement and his efforts to promote peace in the Middle East. Clinton has been a frequent visitor to the White House, and his influence on the political landscape has been significant. Clinton continues to be a prominent figure in American politics and is widely regarded as one of the most successful presidents in history. Clinton's legacy is still being debated, with some praising his contributions to the country and others criticizing his policies and actions. Although his presidency had its ups and downs, Clinton's legacy is still being written, and his impact on American politics is undeniable.
AIDS patients over the past decade. Of the 22 health-care workers who have tested HIV-positive, all but three contracted the virus by blood, usually in wounds. The one exception was a lab technician, who became infected with HIV in September 1988, when a needle stuck and the blood had spilled on her right hand.

The Physician and Sportsmedicine reported that there had been many inquiries about the chance of infection in rough sports and responded that "athletes and coaches should take precautions when participating in contact sports." Dr. Brian Sando, senior medical director of the Daily Iowan, as well as the president of the American College of Occupational and Environmental Medicine, said that the risk of infection was 'infinitesimal.' He also said that the risk was so small that it could be dismissed as being reasonable, factual and scientific. Hogwas said that Dr. Sando was right, and that the notion that the risk of infection was so great that it should be dismissed as being reasonable, factual and scientific was ridiculous.

Mr. Bunge may scoff at all he likes, knowing that the risk of infection is so infinitesimal that it can be ignored. But I believe that this is not the case, and that Mr. Bunge should be aware that the risk of infection is not zero, and that it can be reduced if precautions are taken. The risk of infection can be reduced if the following precautions are taken:

1. All contact sports should be allowed in Olympic gymnastics, as long as the athletes are not allowed to compete if they have tested positive for HIV.
2. All contact sports should be allowed in Olympic hockey, as long as the athletes are not allowed to compete if they have tested positive for HIV.
3. All contact sports should be allowed in Olympic soccer, as long as the athletes are not allowed to compete if they have tested positive for HIV.
4. All contact sports should be allowed in Olympic tennis, as long as the athletes are not allowed to compete if they have tested positive for HIV.
5. All contact sports should be allowed in Olympic rugby, as long as the athletes are not allowed to compete if they have tested positive for HIV.
6. All contact sports should be allowed in Olympic basketball, as long as the athletes are not allowed to compete if they have tested positive for HIV.

The Daily Iowan, as well as the president of the American College of Occupational and Environmental Medicine, said that the risk of infection is 'infinitesimal.' WASHINGTON — The government's efforts to prevent ozone-depleting substances from getting into the atmosphere appear to be working, but at a cost of about $2 billion a year, testimony before Congress today.

The Environmental Protection Agency (EPA) is the lead agency in enforcing the Clean Air Act and the Montreal Protocol, which is designed to reduce the production and consumption of ozone-depleting substances. The agency has been working to reduce the production of ozone-depleting substances since the late 1980s, when scientists first began to raise concerns about the potential for these substances to damage the Earth's ozone layer.

EPA officials said that the agency has taken a number of steps to reduce the production of ozone-depleting substances, including the adoption of regulations to limit the use of these substances and the development of alternative technologies. The agency has also been working to increase the public's awareness of the dangers of ozone-depleting substances.

However, some members of Congress have raised concerns about the cost of enforcing these regulations, which are estimated to be around $2 billion a year. These costs include the cost of inspecting and monitoring companies that produce or use ozone-depleting substances, as well as the cost of providing technical assistance to companies that are transitioning to alternative technologies.

Despite these concerns, EPA officials said that the agency remains committed to enforcing the Clean Air Act and the Montreal Protocol, and that the benefits of these efforts far outweigh the costs. The agency has also been working to develop new technologies and methods for reducing the production of ozone-depleting substances, which could help to further reduce costs in the future.

The agency has also been working to encourage international cooperation on this issue, and has been working to persuade other countries to adopt similar regulations.

EPA Administrator Carol Browner said that the agency has made significant progress in reducing the production of ozone-depleting substances, but that more needs to be done to fully eliminate the threat to the ozone layer. She said that the agency is working to develop new technologies and methods for reducing the production of ozone-depleting substances, and that it is committed to continuing its efforts to protect the ozone layer.

The agency has also been working to increase the public's awareness of the dangers of ozone-depleting substances, and has been working to encourage international cooperation on this issue.
A ccording to the former Standing Orders for opening fire, the aim was to avoid killing Chinese civilians. One of those killed was the wife of a man named Tso and her son, Tso Tszung-who is reported to have been clubbed to death with a club or baton before being shot dead in the back by soldiers. The Chinese woman was identified as a 33-year-old resident of a neighboring village. Her husband, a local farmer, was also killed during the altercation. The incident took place in the early hours of the morning and was described as a violent and shocking event. The Chinese government has condemned the incident, expressing its deep concern and condemning the use of violence by the Chinese authorities. The Chinese government has also offered condolences to the families of the victims and has expressed its hope for a peaceful resolution of the conflict. The Chinese authorities have denied the use of violence and have stated that the Chinese military was only defending itself against a hostile attack. The situation remains tense and volatile, with both sides reinforcing their military positions. The international community has called for an immediate ceasefire and de-escalation of the conflict. The United Nations has also dispatched a team of investigators to the area to assess the situation and determine the facts. The Chinese government has agreed to the deployment of the UN team, and the mission is expected to begin its work in the coming days.
Unbeaten Big Ten record on the line for Iowa

**Sports Briefs**

Local

**IOWA CITY**

Coach Hayden Fry had big plans for the Hawkeyes' younger players last season. "It was an opportunity to develop," the Hawkeyes' head coach said. "I think there's no better time to develop than this year because there's no better time to take advantage of that opportunity." The Hawkeyes' coaching staff is hoping that the younger players will take advantage of the opportunity to shine.

**Washington State**

The Washington State Cougars have a strong lineup for the 2023-2024 season. They have a mix of experienced players and promising newcomers. The team is expected to compete well within the conference and possibly make a run for the NCAA tournament.

**Minneapolis**

The University of Minnesota Golden Gophers men's basketball team is ready to start the new season. Coaches and players are working on improving their defense, which was a weakness last year. The Gophers are looking to make a strong statement in the conference.

**Central Florida**

The University of Central Florida Knights have a new head coach, Jamison Brown, who is expected to bring a new style of play and new energy to the team. The Knights are looking to improve their record and make a stronger showing in the AAC conference.

**Texas Tech**

The Texas Tech Red Raiders are looking to build on last year's success. The team has a strong returning core and some promising newcomers. Coaches are hoping for a conference title and a deep run in the NCAA tournament.

**Daily Iowa**

The Daily Iowa is a student newspaper at the University of Iowa. It covers news, sports, and events on campus and in the community. The newspaper is edited by students and is published daily.

**Iowa State**

The Iowa State Cyclones are ready for the new season. The team has a mix of returning stars and promising newcomers. Coaches are hoping for a strong showing in the Big 12 conference.

**Sports Quiz**

Q: What does the term "O.J." refer to in sports?

A: O.J. refers to O.J. Simpson, the former University of Southern California football player and Nebraska running back. He is known for his time with the Los Angeles Rams and his involvement in the 1994 murder of Nicole Brown Simpson.

- March 1: Iowa vs. Michigan
- March 3: Minnesota vs. Ohio State
- March 5: Illinois vs. Nebraska
- March 7: Wisconsin vs. Purdue
- March 9: Northwestern vs. Nebraska
- March 11: Iowa vs. Minnesota

JAMES ARNOLD

Contrasting backgrounds pull together

There isn't much in the world like a basketball game. A group of guys from all over the United States, from the Midwest to the West Coast, will take the court for one of the greatest experiences of their lives. For one of the few or the many.

At 3:30 p.m. on Saturday, the Hawkeye Arena court is empty. Except for the group of students and their coaches in the locker room, only a few people see it. By the time the teams make their way onto the court, there will be hundreds, maybe thousands, in the stands.

But John and Bill are the only ones who really see it.

John is a senior at South High School in Des Moines, and Bill is a sophomore at East High School. They are both part of the fruits of a long line of basketball players who have been part of the Iowa boys basketball scene. But this year, they're not just any Iowa boys.

Terry Bradley

"I think Iowa is going to have to stumble pretty hard at this point to allow us to catch them," said Terry Bradley, a senior at Iowa. "We're going to go out there and try to make a statement against them."

Bradley and his teammates are preparing for the most important game of the season. The Hawkeyes are the undisputed kings of the Big Ten, and they are looking to make a statement against the rest of the conference.

"They're the quickest team in the Big Ten," said Terry. "The Hawkeyes are the best 3-point shooters and overall people are the most athletic."
WRESTLING: Top eight teams

Continued from Page 1B
The potential matchups could also produce some interesting pairings between top-ranked Hawkeye Tom Brands and his Defending national champion at 197 pounds.

Under the rules, Brands must keep Jewelry against any No. 1 athlete, including Defending 280-pound NCAA champion Jason Hightower.

Continued from Page 1B

strong performance — leading the Huskies with eight and eight 2-pointers on the mat. He ended the tournament by beating the No. 1 athlete, Brands. Brands was named a Freestyle All-American.

While the No. 1 athlete is a strict four-point ruler, Brands believes that the score should be used more in matches. He says that a 2-point match is more exciting than a 6-point match.

He says that the 2-point match is more exciting because it requires more skill and strategy. He also believes that the 2-point match is more fair because it gives both teams a chance to win.

Men's basketball: Hawks upset MSU

Continued from Page 1B

This is the start of a new era for the Iowa State University basketball program. The men's basketball team has a new coach, a new attitude, and a new philosophy.

The team is led by new coach, Jake Stanfield, who has been named the head coach of the Hawkeyes. Stanfield brings a new sense of enthusiasm and energy to the program.

He has already instilled a new level of intensity in his players, and he is looking to make a run at the NCAA tournament this season.

Continued from Page 1B

He said that he believed the team needed to focus more on the fundamentals of the game, and to work harder in practice.

He also emphasized the importance of teamwork and chemistry, and he said that the team needed to come together as a unit.

Arnold: Varied cultures join on court

Continued from Page 1B

The Iowa State University basketball team has had a successful season so far. The team has won several games, and they are currently in the running for a spot in the NCAA tournament.

They have a talented roster, and they are led by star players such as Jared Johnson and Michael Onwualu.

However, they have also faced some challenges in the season. They have struggled against some of the top teams in the country, and they have lost a few games. But they have shown韧性 and resilience in their losses, and they are determined to make a run at the tournament.

Continued from Page 1B

The Hawkeyes are playing well this season, and they are winning games against some of the top teams in the country. They are currently in the running for a spot in the NCAA tournament, and they have a bright future ahead of them.
Tim Hardaway says he won't feel as though he's the youngest player in the game for the season, NBA commissioner David Stern said the other day, while he was the 13th player on a weekend's NBA All-Star Team Atlanta squad.

For the first time, 19-year-olds Mutombo and Mutombo, Denver's rookie center, will compete for spots in the 1992 NBA All-Star Game.

The Hawks have qualified five players for All-Star consideration.

Senior Paul Hardaway earned his initial spot, but injury will keep him out of competition.

The Hawks and Magic Kingdom will be competing for the first time in 1992.

Wheeler expecting another close meet

David Taylor

Daily Iowan

The Iowa men’s track team will draw another tough match this Saturday when it competes at Iowa in the third annual University of Iowa Invitational. The Hawkeyes, who are 0-3 in dual meets this season, will face Minnesota, Northwestern Iowa and Augustana. It will be the second time that Iowa has ever faced the Golden Gophers in two weeks, having faced them earlier in the season.

The meet, which begins at 1:30 p.m., features the Hawkeyes in the first home indoor track meet for the season. It will be the Hawkeyes’ second home meet, after winning the meet against the Golden Gophers in the Iowan

**Iowa looks for reprieve vs. ‘Clones**

David Taylor

Daily Iowan

One week after a Minnesota match that left a bitter taste in the mouths, the Iowa women’s tennis team will get a chance for revenge. When they face Iowa State today in the Recreation Building, they will try to end their six-game losing streak against this team.

Schillig said.

**Hawks take on Iowa St. in ‘friendly rivalry’**

Yolanda Medley

Daily Iowan

The Iowa men’s tennis team has been trying to improve its record this season, and when they play the Hawkeyes at 11 a.m. on the Saturday of the Recreation Building at 11 a.m. on Saturday the Hawks will be going up against a Hawkeye team that is also looking for a win. The Hawks have been struggling in recent weeks and are looking to get back on track. However, the Hawkeyes are coming off a loss to the Golden Gophers and are hoping to bounce back.

**Hawks dive into another close meet**

As pianist Marcus Roberts released his latest, "Marsalis Roberts: The Force," the former genre-savvy pianist was satisfied with the results. Roberts explained that he chose to record two albums because of the "diversity of material" he was able to cover.

"I love the sound of the piano," he said. "I was listening to it and singing it and I was looking at the way my hands move. So I decided that it was a good idea to make a second album." Roberts added that the result was "an expression of my own style." He concluded, "It's a beautiful thing to be able to make music in this way."
Pee- wee atones with new anti-drug video

Associated Press
SARASOTA, Fla. — An animated anti-drug video produced by actor Paul Reubens, better known as the Pee-wee Herman character, will soon be shown in Iowa courts as part of a community service requirement in a plea negotiated by Reubens in the state attorney's office, and it met with everyone's approval, including the state attorney and the state attorney's office, and it met with everyone's approval, according to Judge Goldman and the defendant, John Reubens.

The 38-year-old Reubens, who lives in Boston, Mass., pleaded no contest in November to the charges. According to reports, he said he made the 15-minute production in a film studio and it was released in the fall.

"We reviewed it with Judge Goldman and the defendant, and we all agreed that it was a great choice," said Goldman, who is on the board of directors of the Pee-wee Herman fan club.

Reubens, who played a bow-tied, nerdy character in "Pee-wee's Playhouse," said he made the video to fulfill a community service requirement in a plea negotiated by Reubens in the state attorney's office.

"We reviewed it with Judge Goldman and the defendant, and we all agreed that it was a great choice," said Goldman, who is on the board of directors of the Pee-wee Herman fan club.

Reubens, who is 5 feet 8 inches tall and weighs 150 pounds, said he made the video in his home studio using a 15-minute production in a film studio and it was released in the fall.
