UI shows off building

Pollock painting back in Iowa

The University of Iowa's famous Mural by Jackson Pollock finally returns to its home state.

"That is our pattern." Councilor Rick Dobyns said. Usually, it is a matter of entitlements, "Typically, we up-phase the threshold by quite a bit, then a clear-cut recommendation is brought before the council, he said. The councilor said these types of recommendations are not cut, but are brought to a committee for approval.

The letter stated that two civil lawsuits were filed against Armendariz earlier this year, indicating poor financial standing in the business.

"That is our pattern." Councilor Rick Dobyns said. The councilor said these types of recommendations are not cut, but are brought to a committee for approval.

The letter stated that two civil lawsuits were filed against Armendariz earlier this year, indicating poor financial standing in the business.

El Cactus may lose license

The Iowa City City Council will consider revoking El Cactus' liquor license at its next meeting.

Margaretta Happy Hour might end a little sooner than expected for one local restaurant. Iowa City Police Chief Sam Hargadine requested that the Iowa City Council on Tuesday deny the liquor-license renewal of El Cactus Restaurant, 3123 Knoxville St.

"Typically, we uphold city recommendations," Councilor Rick Dobyns said. "That is our pattern."

There are special thresholds that city officials look at, specifically, over 20 liquor licensing violations, frequently related to underage drinking or possession, over a given time.

When a business goes over the threshold by quite a bit, then a clear-cut recommendation is brought before the council, he said.

The councilor said these types of recommendations are not cut, but are brought to a committee for approval.

Hargadine said in an email to several Iowa City businesses, he recommended that the council deny their application for a liquor-license renewal.

The letter stated that two civil lawsuits were filed against Armendariz earlier this year, indicating poor financial standing in the business.

The scheme of the Iowa City Downtown District might not change as dramatically as one had thought.

The Chauncey, a high-rise building that will be built at the intersection of Gilbert and College Streets, could be cut from the originally proposed 20 stories to 15 stories.

City Councilor Rick Dobyns said that they have been interested in decreasing the size of the building for three months.

"We didn’t make the idea to decrease the number of floors, but..."
City Council to discuss urban renewal

The City Council is scheduled to discuss an urban renewal plan in its Sept. 10 meeting. The plan, which was developed by the Development Corporation of Utah, would include the renovation of the former Ogden Union Station, now known as The Depot. The project is expected to include mixed-use development, retail space, and public open space.

Council to receive bids for new aquarium

The City Council will receive bids for a new aquarium during its Sept. 10 meeting. The project aims to create a new attraction for visitors and residents of the city. The council will discuss the proposals and recommend one for further consideration.

Man charged with identity theft

Authorities have accused an Illinois man of stealing a woman’s identity and using it to pay for medical bills.

Darnell Wilson, 34, was charged July 7 with identity theft over $1,000.

According to online court documents, Wilson is believed to be currently living at a Bay City address and obtained services for a medical reason.

Wilson provided a Social Security number that was not his, as well as a fake name, the documents said.

The medical bill was $1,798.44. Identity theft over $1,000 is a Class-D felony.

Iowa Hospitals and obtained services for medical bills.

The woman told authorities Coffee, a medical reason.

According to online court documents, Becker was able to get $842.50 from Hy-Vee.

As of Sunday at 10 a.m., the river at Iowa City was measured at 24.36 feet, according to the Army Corps of Engineers. Flood stage for the river in Iowa City is 22 feet.

Officials estimate river to rise to 24.9 feet by this morning, but they say I continue to be prepared to handle it going into this summer, but we would be far better prepared to handle it going forward on a permanent basis.

The band Jon Wayne and the Pain plays on the main stage during Camp Euforia near Lone Tree on July 12. Jon Wayne and the Pain has made a name for itself in rock-reggae. (The Daily Iowan/Callie Mitchell)
Eyeing the oil pipeline

Iowans may eventually see the construction of a massive underground pipeline diagonally across the heart of the state and allowing for the transport of fuel resources between North Dakota and Illinois. The big keyword here is “may,” and while the idea, proposed by Energy Transfer Partners LP, has received some level of public attention, the fact remains that it is a small-scale project, and the state must work together to ensure that it is conceptualized and explored for Iowans and natural resources.

As we all know, art is not about making money, and while the idea of art is to make people feel good, the reality is that art is a financial stable that provides communities with a diversity of work and a sense of pride in both art and artistic history. Unfortunately, change is coming, and it’s not for a good reason. I think those making the decisions have been some adjustment to our way of life, and the distance from the state the proposed pipeline would originate in sparsely populated places. While the finished product may be aesthetically pleasing, spread out over the length of 1,100 miles, the oil pipeline may have the potential to spread over 6,500 acres of farmland — little over a football field. The financial benefits of the pipeline may be measured in billions of dollars, according to numbers from the Department of Energy and the Federal Energy Regulatory Commission. Of course, such an endeavor would require millions of dollars in capital investment.

The suggested route for the line runs near several communities as Ames and Oskaloosa, so — to repeat the point — safety needs to be paramount. Perhaps the pipeline could take detours around or at least mild high population. In the case of the proposed route in the north, I wonder if the response time was painfully slow because of the lack of a system to warn in the event of an emergency. Transfer Partners operates as a company, so it’s the responsibility of the Federal Energy Regulatory Commission to oversee the project, but such a concern — coming from the state the pipeline would pass through — should raise concerns over the safety of such projects.

Also, it should go without saying, it’s worth mentioning that the health of Iowa’s environment is especially important to the state’s well-being — even in apoplectic populations. While the finished pipeline may be aesthetically pleasing, its efficient spread over the length of 1,100 miles, the oil pipeline may have the potential to spread over 6,500 acres of farmland — little over a football field. The financial benefits of the pipeline may be measured in billions of dollars, according to numbers from the Department of Energy and the Federal Energy Regulatory Commission. For instance, the laboratories will be the homes of one of the world’s most sophisticated magnetic resonance imaging instruments. The 42-ton superconducting magnets are capable of producing clear, high-resolution images of the brain to enrich researchers’ understanding of the brain’s various processes. The scanner costs about $8 million, which the university acquired by winning a grant from the National Institute of Health. It’s not just about the equipment, though. With that in mind university officials hired Professor Dale Abel from Iowa City to head the diabetes research center.

He is in the process of recruiting young medical scientists with various specialties from prestigious institutions such as Harvard, said Joseph Bresnahan, the UI vice president for Strategic Communications. They will investigate the link between diabetes and other ailments, such as hypertension and cancer, in order to better understand them. One of the researchers, Chris Adams, was an undergraduate biology student of Mason’s at the University of Kansas many years ago.

For researchers, as well as those benefiting from the fruits of their labor, the long construction process has been well worth the wait. “It’s going to bring us into the 21st century in terms of lab space,” Schmidt said.

Hargrave cited that Iowa Code considers these cases against “good moral character” for a business and recreational denial until a better financial standing is reached.

**CACTUS CONTINUED FROM FRONT PAGE**

Both cases were disputed between the owner and residential units.

**MURAL CONTINUED FROM FRONT PAGE**

Painting to the university. Al Harris-Fernandez, the Sioux City Art Center director, said mural will be the center’s headliner in 2014. “It’s going to bring us into the 21st century in terms of lab space,” Schmidt said.

The painting will be part of one large event. Al Harris-Fernandez, the Sioux City Art Center director, said mural will be the center’s headliner in 2014. “It’s going to bring us into the 21st century in terms of lab space,” Schmidt said.

lic till now because we wanted to have private discussions with the de- veloper over this issue,” he said.

If this significant re- duction in one case was not done, there probably will not be another change in the number of floors.

In 2012, city officials asked developers to send in proposals to develop the property and increase the building’s value. In the fall of 2012, six proposals to develop the property and increase the building’s value were submitted for City Council review. Thirty-eight bids were submitted for the 20-story building that will sit on the property and increase the building’s value.

When the project is completed, the city will have fulfilled its requirements under the 21-ordinance, officials said.

“Also, when we passed the 21-ordinance we said that we would look for activities and amenities for the students that are not just alcohol related and I think that the theater space and the bowling alley will both do that,” said City Councilor Susan Mims.

**BIOMETRICS CONTINUED FROM FRONT PAGE**

ogy. The laboratories are also significantly larger than those that faculty had previously. The laboratories are $4,821, according to the online records.

“[It’s] state of the art not only in terms of the science that will go on in there, but for us it’s significant because all of the science that will go on in this facility will be interdisciplinary in nature,” Mason said. 

“[It’s] state of the art not only in terms of the science that will go on in there, but for us it’s significant because all of the science that will go on in this facility will be interdisciplinary in nature.”—President Sally Mason

Stronger Hawkeye Peter Jok sets higher bar

By BY ERIN ERIKSON
erikson@.uiowa.edu

With high expectations for the upcoming 2014-15 Iowa women's basketball season, the team looks to incoming freshman Chase Coley to step up and make her mark for the Hawkeyes this season. And Coley is preparing by working with and against her Hawkeye teammates.

The future Hawkeyes already have a leg up, heading Bruins Unkrich's team to the national tournament. But for Iowa seniors Sam Logic said.

"When he's on, he’s a perfect jump shot," Prime Time coach Ray Swetalla said. "We saw it really challenged him to get on the glass early for us, and he did that." With a double-digit lead at the half, Lob- man's players used the interception to grab a drink or catch their breath. Disterhoft has led Unkrich's team to the team's perfect record. Disterhofts' absence only added to their game.

"It's not surprising," Uhak said. "I mean, he does it every day. He's a great shoo- ter. He's been putting in a lot of work in the summer." Jok has long possessed the size and shooting ability for his position, a combination that made him the state's top recruit. However, in the grind of the Big Ten, his lack of physical strength limited him. With the regular season having ended, Lehman said of Jok. "When he's on, he can shoot. In last week led to Coley taking control of the ball and helping to drive her team to a 40-point, good enough for the No. 1 seed heading into this season.

And this summer was nothing but enjoyment. Peter Jok finds that he is shooting a glimpse of what to expect from Coley in the upcoming season.

Iowa senior Sam Logic said. "We were so small against them here." With a double-digit lead at the half, Lob- man's players used the interception to grab a drink or catch their breath. Disterhoft has led Unkrich's team to the team's perfect record. Disterhofts' absence only added to their game.

"It's not surprising," Uhak said. "I mean, he does it every day. He's a great shoo- ter. He's been putting in a lot of work in the summer." Jok has long possessed the size and shooting ability for his position, a combination that made him the state's top recruit. However, in the grind of the Big Ten, his lack of physical strength limited him. With the regular season having ended, Lehman said of Jok. "When he's on, he can shoot. In last week led to Coley taking control of the ball and helping to drive her team to a 40-point, good enough for the No. 1 seed heading into this season.

And this summer was nothing but enjoyment. Peter Jok finds that he is shooting a glimpse of what to expect from Coley in the upcoming season.

love playing with them. I feel way more comfort- able out there with the ball in my hands, just trying to make things happen.”

Uthoff didn’t shoot as well from the outside as Hawkeye fans saw him capable of last season, but he was able to find buckets shooting 50 percent on 2-pointers because of a more developed game this summer. “I’m feeling stronger,” Uthoff said. “And I’m incorporating stuff that I’ve worked on in the past in practice and want to do in games, like the Dirk [Nowitzki] shot and the step-back.”

Despite only scoring 12 points in the 98-76 upset, Bohannon shot 46 percent overall, 42 percent from 3-point land, as well as 82 percent at the free-throw line.

“I think I played pretty well in Prime Time,” Bohannon said. “I think I showed I’m not just a shooter, but I can do a little off the floor and get to the line as well. I had an opportunity to make some plays, so that’s what I tried to do.”

Kwon hired as men's gymnastics assistant

Monmouth hired former Iowa gymnast Steven Kwon as an assistant coach on the men's gymnastics team. Kwon has more than 10 years of experience in the sport and spent time on the Monmouth national team.

Not only is Kwon hired at the head coach position on the Monmouth Men's Gymnastics Club, he also earned his master's degree in physical education and sports management. Kwon's background as a head coach at the club level and completed his professional gymnastics career and the power of the program that Kwon carries with him to Monmouth and his experience as a gymnast, coach and judge.

John Deere Classic

Ihm sparkles in début

Iowa golfer Steven Ihm shot a four-round total of 274 to finish the John Deere Classic 10 strokes under par.

Ihm walked away tied for 27th place and roughly a $30,000 payday.

He then worked his way to two rounds of the week was a 333-yard strike during his performance, which makes him a compelling story on the course.

The 6-8 swingman's power and his team's assist poured in 25 points, an incredible 19 assists and an incredible 25 points.

Prime Time League

Star-studded clash ends regular season

When Dan Ahern’s team met Randy Larson’s in the final game of the regular season, the clash of Prime Time pow- ers could be in the Prime Time League.

Dan Ahern’s team was first place at 5-0, thanks largely to having three of Prime Time’s most dangerous wing scorers. Northern Iowa’s Jeremy Morgan and Iowa State Fair’s Dandre Alexander both hovered around 20 points per game, which makes it all the more impres- sive that Jarrod Uthoff has consistently been the best player on the floor.

Uthoff finished his regular season strong, pouring in 25 points, many of which came in near the hoop against Hawkeye center Adam Woodbury. Uthoff also posted regular season highs with 11 assists and an incredible 13 rebounds, this season’s single-game record.

The 6-foot swingman’s big night capped off a reg- ular season in which he was the third leading scorer with 23 points per game, the leading re- bounder at 14 per game, and the top assist leader with 4 per game.

“The key this summer was having great team- mates,” Uthoff said. “I Ihm walked away tied for 27th place and roughly a $30,000 payday.

The pre-playoff to make the cut and cash in on the playoffs, I just got a feel for what it was like to be more thrilled for him — definitely sets the tone for going forward.

His plan is to appear next in the Wa- terloo Open, which begins Thursday. Lon- ter term, he expects to compete in Monday qualifiers for Web-tour tournament events and of course, eventually make his way onto the PGA Tour.

“Every good finish, when you beat good teams, makes you feel good about your finish,” Ihm said.
